Growers throughout the southern counties still hold large stocks of sweet potatoes, for the most part good, sound "sweets" which are well graded and carefully inspected before they are marketed. The State Department of Agriculture recently inaugurated a sweet potato week to boost consumption. Retail prices, however, have not been high enough to encourage the rapid movement of sweet potatoes to market. Nine New Jersey cities report prices around \$2 per basket. Wholesale prices in Philadelphia, New York and Northern New Jersey cities have ruled from 50 to 60 cents a basket, with 90 cents practically the highest on very fancy stock, graded and inspected under supervision of State representatives.

Burlington Co.—Out of 1,400 tuberculin tests made by the State on dairy cattle in this county, only 15 per cent of the animals have been found infected, according to figures reported at the recent meeting of the Burlington County Guernsey Breeders' Association. The following make up the list of officers of the Association: President, Lyman A. Horner of New Liston; Vice-president, Walter E. Wright of Columbus; Secretary and Treasurer, Joseph E. Evans of Marlton. The present organization is the outgrowth of a Guernsey Bull Association started in the county 25 years ago.

Gloucester Co.—Truck growers and farmers around Swedesboro have united with some of the other business groups to bring down an extension of the Reading Railroad from Mullica Hill. The intensive shipping of tomatoes, sweet potatoes, fruits and other farm products from Swedesboro creates the need for wider transportation facilities. New railroad contracts will give broader marketing contracts to the Gloucester County farmers, who maintain that their business is sufficient to justify their request.

Gasoline is lots cheaper than elbow grease when it comes to pumping the water from a deep well.

UNADILLA SILOS

THE gambrel roof of Unadilla Silos insures a full silo when silage settles.

The filling door is at the top which permits the full use of the extra space offered by the gambrel roof.

Silage settles from 15 to 20 per cent. You pay for a certain capacity silo. You get it with a Unadilla Silo and a Unadilla Gambrel Roof.

Write for big new Unadilla Catalogue and learn how early orders earn extra discounts.

MAKES HIS OWN WORM DESTROYER

Geo. E. Helser, Breeder of Merino Sheep, Finds a Sure Way to Keep Sheep and Lambs Free From Worms and in Thriving Condition

"Like every breeder and farmer who keeps sheep, I have had no end of trouble and losses from stomach and intestinal worms. I learned that The Ivo-San Laboratory of Cleveland, Ohio, had been conducting some extensive investigations and tests in connection with stomach and intestinal worms in all livestock, particularly sheep and hogs.

"I wrote to them to find out what results they had obtained and in reply they said they had discovered what seemed to be the most efficient and satisfactory remedy to destroy worms in livestock, that has yet been produced. Furthermore, their preparation was in concentrated form so farmers could mix their own remedy. They offered to send me a 15-lb. package of this new discovery, telling me how I could make my own worm destroyer and save over half of the usual cost of such preparations, and that if it did not do the work, the small charge they made for it would be refunded.

"I sent for a 15-lb. package of their Wormix. It did the work. Later I ordered six packages more.

"I keep it before my lambs and sheep constantly—let them have free access to it and as a result I haven't a lamb or sheep that shows a trace or sign of stomach worms. I never had lambs do so well or look so rugged and thrifty. Wormix is a real worm destroyer and preventive too.

"If sheep owners would keep it before their sheep and lambs constantly, the worm problem would disappear from their flocks entirely, just as it has from mine, I am sure."

Wormix, as Mr. Helser of Lafayette, Ohio, stated, is a worm destroyer in concentrated form. You buy

it at a small cost and mix it with ordinary salt. Thus you do not pay drug prices for salt or other fillers. You save over half the usual cost of such preparations and you get a worm destroyer far ahead of anything yet discovered. It also contains bone growing minerals, is a tonic and digestive and will prove the best thing you ever used on lambs, sheep, hogs, horses and cattle for ridding them of worms—keeping them free from these costly pests—keeping all your stock in healthy, thrifty, growing condition. No trouble to feed; no starving, dosing or drenching. Animals take it readily and doctor themselves.

WORMIX is sent direct to you, charges prepaid. One 15-lb. package Wormix—enough to make 100 pounds \$3.50
One 90-lb. package Wormix—enough to make 600 pounds 18.00
(West of the Rocky Mountains, 6c a lb. more.)

You take no risk—if Wormix does not prove satisfactory, your money will be refunded. Fill out coupon NOW.

A MORE MILK MESSAGE

More milk from your cows—better physical and health condition of the herd are the rewards that come to the dairyman or farmer who feeds Sugared Schumacher Feed.

Sugared Schumacher is essentially a Maintenance ration. It supplies the cow with an abundance of bodily nutrition—nourishment—and thus fits her to produce MORE MILK. It is giving unusual satisfaction to thousands of critical feeders. Feed

SUGARED

SCHUMACHER FEED

as the base or maintenance part of your ration along with cottonseed meal, gluten, Big "Q" or other concentrates and you will see a marked improvement in milk yield and general health condition of your herd. Composed of Corn, Oats, Barley, Wheat, finely ground and sweetened with Cane Molasses, Sugared Schumacher is highly nutritious and extremely palatable. It's sweet—cows like it—do better on it. Your dealer can supply you.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Look over the premises for piles of brush that need removing; then use part of the week in getting rid of them; they are a danger and menace.

"You Always Get It"

Service Bureau Helps Readers Recover Claims

"I RECEIVED the check all right. Thanks very much for your promptness in taking up our claim. You always get it. Respectfully yours,

"R. H. MORRIS, Rimmerfield, Pa."

It was thus that Mr. Morris acknowledged the receipt for a check for \$15.90 forwarded to him on December 19 by the Service Bureau. This terminated a case which we had pressed for Mr. Morris against the American Railway Express Company. There had been some difference of opinion as to the value of the case, which Mr. Morris had consigned to a New York City firm, but a little patience straightened the matter out and the result was entirely satisfactory to our subscriber.

A New Cherry Tree Sent

A cherry tree that didn't grow cost Mrs. A. W. D. of Pa., \$3, and the company from which it came reported, when she asked an adjustment, that they found no trace of the order.

However, the Service Bureau took a hand, with the result that the tree is to be replaced by one guaranteed to grow.

Express Company Makes Good

A claim against the express company for \$8.37 was rapidly settled when the American Agriculturist took it up. It was due the subscriber, Mr. D. I. P. of New York, because many of the eggs sent a New York commission house were mashed in transit.

The express company not only settled for the mashed eggs, but made good the difference between the standard price and the much lower rate paid by the commission house for a part of the eggs which were cracked. Mr. P. therefore, got the full rate for his entire shipment and gave the Service Bureau credit for saving his money.

THROWING SOME BOUQUETS

"I received a check for the full amount from the express company last Saturday. I surely do appreciate your interest and heartily thank you for your good work. I know that, but for you, I would never have gotten it. Anyone who takes such an interest in their subscribers and works so hard in their behalf, without compensation, will surely meet with nothing but success I know. Any way, here's hoping for the very best for you and your paper."

—LEON A. TALBOT, Edmeston, N. Y.

We didn't mean to quote all that letter, but once we got started it was hard to stop! Mr. Talbot's appreciation made us feel so good that we just kept on to the very end!

At any rate, he seems glad he got the \$8.98, and on looking up our records we found that there was no wonder he had despaired of ever seeing it. The correspondence with the express company, the commission house and the subscriber went back to last August, and we had been tempted once or twice to believe that there was no hope of pinning the responsibility on the right firm.

However if there's one virtue we possess, it is patience and we exercised that. Result—a check and better yet, Mr. Talbot's letter. Thanks are due all around.

ESPECIALLY SPECULATIVE

Financial Department:—Do you consider the Hudson Tire and Rubber Corporation, Yonkers, N. Y., worth investing? They are about to start operations.—(K. H., New York.)

Stock of any company which is about to start in operations is not an investment in any sense but only a speculation. When the company is a tire and rubber company it is a dangerous speculation, in our opinion. We advise you to leave it alone. The automobile and tire industry is heavily saturated and there are many "plunges" made that end seriously for investors. The best of them find times when "sledding" is hard.

BOOTIES PAID FOR

Last March, Mrs. W. A. S. of New York sent a shipment of booties to a New York firm. She waited some time, but received no acknowledgment or

payment. In December, she turned the case over to the Service Bureau of American Agriculturist.

A representative of the company immediately called on us and showed us the record, which they had investigated at our request. As a result, they immediately sent a check to Mrs. S., who wrote us that it had been received and that she was very glad to have the matter closed.

When Drying Wet Shoes—When your boots and shoes get soaked, be careful how you dry them. Dry them slowly; never let them get hotter than your hand can stand; wet leather burns before you know it.

New Way of Hatching Makes More Money!

YOU can double your poultry profits with perfect hatches. Thousands are doing it with **PORTER SOFT HEAT**. J. R. Singleton, Alba, Texas, made \$404.11 with one Porter Soft-Heat Incubator in about four months. Sold 250 baby chicks, 200 broilers, and had 250 pullets and 120 cockerels for himself.

More Than An INCUBATOR

Porter Soft Heat—greatest invention in the poultry world. An automatic mother that stays on the job till hatch is off. Iron Clad Guarantee. Strong healthy chick from every good egg. No cripples. Seats the hen. Circular nest. Center heat. One filling of lamp to hatch. Glass top. Automatic regulation of heat, ventilation and moisture. 10 minutes a week cares for it. Shipped prepaid. **FREE** Send name—card will do for free book "How to Hatch For Profit," and low direct prices.

PORTER INCUBATOR CO. 100 to 1000 Box 1241, Blair, Neb. Egg Sizes

FIREMEN, BRAKEMEN, beginners \$150-\$250 monthly; railroads everywhere (which position?). RAILWAY ASSOCIATION, Desk W16, Brooklyn, N. Y.

Herein is a live new literature, when the man who owns the farm, lives on it and works it, shall write with direct experience and a full heart, giving us an artistic product.

RED BLOODED, BANG-UP STORIES!

12 Great Books!

QUICKSHOT OF THE RIO GRANDE STEPHEN CHALMERS
"Looking for Trouble is my middle name," said Impulsive Pop, adventuring cowpuncher. And there on the border, among raiding Mexican bandits, train robbers, Texas rangers, a prairie fire—not to mention a pair of blue eyes—he did not have far to look.

LOADED DICE EDWIN L. SABIN
A romance of Texas of the early days, when lives depended on the quickness of draw, and all the courage of the pioneers was needed to brave the perils they so fearlessly faced. A thrilling tale of men who were jugglers with death.

SONTAG OF SUNDOWN W. C. TUTTLE
The story of the question of ownership of the TJ ranch—a question which promoted bloodshed and a war of no mean caliber. The cowpunchers of this story will live long in your memory for their originality and enterprise. They are men whose best friends were their nerve and their gun.

SPAWN OF THE DESERT W. C. TUTTLE
A tale of Calico Town: Where men lived raw in the desert's maw, and Hell was nothing to shun; where they buried 'em neat, without preacher or sheet and wrote on their tombstone, crude but sweet, "This jasper was slow with his gun."

ARIZONA ARGONAUTS H. BEDFORD-JONES
Three adventurers whose fortune in the Arizona desert lead through drought and danger to the goal they sought, gold, free gold, the gold of which they had always dreamed. They were men quick on the trigger who loved to face odds.

THE LURE OF PIPERS GLEN THEODORE G. ROBERTS
It was the lure of all the great timber country of the North, of plentiful game, of the clear wind from the great plains. The call came South; young Jim Todhunter heard it, and a great tide of life in the North caught him up to bring adventure a-plenty.

APACHE VALLEY ARTHUR CHAPMAN
A story of a cattle war in the southwest, with all it means—terror and blood feud; alarms by night and day; rustling and stealthy murder. And through it all are woven the lives of true men as well as thieves, men whose lives reflected the glories of the land they protected.

THE CHALLENGE OF THE NORTH JAMES B. HENDRYX
This is a story of the call of the great Northland; of purposes and cross purposes; of true men and of "bad" men; and of big deals and pioneering triumphs. A tale of the north, which holds for the young, the strong and the brave adventures that are countless.

THE SECOND MATE H. BEDFORD-JONES
Peril and mutiny on the China Seas. When every scupper was running red, and with two white women at the mercy of a villainous crew composed of the sweepings of the outermost islands, Jim Barnes realized the gage of desperate battle he had accepted when he signed on as second mate of the SULO QUEEN.

THE DEVIL'S PAY DAY W. C. TUTTLE
A sky of brass, the sun a flame, And the land no place to dwell; A hunk of earth so doggone hot That it still belongs to Hell.

THE CANYON OF THE GREEN DEATH F. R. BUCKLEY
Who were the devils in human form whose haunt was the lost baranca? Invisible, terrible, they brought the redoubtable young officer of the law to a strange dilemma. The law of the land commanded him not to desert his prisoners; the law of the desert ordained that he stand by his companions. Which did the Fates decree he should obey?

SKY-HIGH CORRAL RALPH CUMMINS
A yarn of the unending feuds between cattlemen and forest rangers; of the forest fires, grazing herds and bitter fights at timberline. Yet in the end our gallant young ranger, through ordeal of battles, fire and blood brought the old-timers to see that the new ways of forest conservation are best.

Thrills on Every Page

12 Big Bully Books \$1.98 For All

Every One a Ripsnorter!

Exciting? You'll say so! Twelve red-blooded tales. Real thrills on every page. You whirl along breathlessly from climax to climax. Smashing, unexpected endings make you gasp. Never a slow evening if you own these books. Just like being a cowboy, a prospector, a dare-devil adventurer yourself! Every story a "humdinger."

Live the life of the big open Western world—among hairy-chested, hard-fighting frontiersmen who tramp, ride, camp, scheme, love and hate—yes, and sometimes shoot to kill! Live among them in Adventure-land! These fascinating, gripping stories will pick you up, and whirl you bodily into the "gun-toting" life of the West—the bad old, glad old West. Every one of these books will make you "hold on to your chair."

SEND NO MONEY

You can get this whole library of 12 fascinating, nerve-tightening books for about 16c each, without a penny in advance. But listen! The night these books come you won't sleep! You're just bound to finish the one you start—if it takes till 3 A. M. You can't be lonesome or out of amusement while you have these smashing stories in your home. Yet EVERY STORY IS CLEAN and WHOLESOME—nothing that should not be read by any boy or girl.

Get this whole library right away. Don't send any money. Just your name and address on the handy coupon, and mail it. The whole 12 of these splendid books, each printed on good paper and each with a striking cover in full color, will be sent to you promptly. Just pay \$1.98, plus a few cents postage, to the postman who delivers the books, and they are yours. There are no other payments of any kind. Each book complete. If you are in any way dissatisfied, send them back to us—and we will send back your money in full. Stake yourself to a whole lot of pleasant evenings! Think of it! 12 full-length novels for only \$1.98—and you take no risk. Take up this offer right now, for it may not be repeated in this magazine. Send the coupon today—NOW!

The Valley of the Giants—By Peter B. Kyne

HE had been in town less than an hour when the editor of the Sequoia "Sentinel" sent up his card. The announcement of the incorporation of the Northern California Outrage (for so had Mr. Ogilvy, in huge enjoyment of the misery he was about to create, dubbed the road) had previously been flashed to the "Sentinel" by the United Press Association, and already speculation was rife in Sequoia as to the identity of the harebrained individuals who dared to back the enterprise, Mr. Ogilvy was expecting the visit—in fact, impatiently awaiting it; and since the easiest thing he did was to speak for publication, naturally the editor of the "Sentinel" got a story which, to that individual's simple soul, seemed to warrant a seven-column head—which it received. Having boned up, what Buck Ogilvy didn't know about redwood timber, lumber, the remaining redwood acreage and market conditions, past and present, might have been secreted in the editorial eye without seriously hampering the editorial sight. He stated that the capital behind the project was foreign, that he believed in the success of the project and that his entire fortune was dependent upon the completion of it. In glowing terms he spoke of the billions of tons of timber-products to be hauled out of this wonderfully fertile and little-known country, and confidently predicted for the county a future commercial supremacy that would be simply staggering to contemplate.

When Colonel Seth Pennington read this outburst he smiled. "That's a bright scheme on the part of that Trinidad Redwood Timber Company gang to start a railroad excitement and unload their white elephant," he declared. "A scheme like that stuck them with their timber, and I suppose they figure that the same old gag might work again. Chances are they have a prospect in tow already."

When Bryce Cardigan read it, he laughed. The interview was so like Buck Ogilvy! In the morning the latter's automobile was brought up from the steamship-dock, and accompanied by his secretary, Mr. Ogilvy disappeared into the north following the bright new stakes of his surveying-gang, and for three weeks was seen no more.

On a day when Bryce's mind happened to be occupied with thoughts of Shirley Sumner, he bumped into her on the main street of Sequoia, and to her great relief but profound surprise, he paused, lifted his hat, smiled and opened his mouth to say something—thought better of it, and continued on about his business. Shirley looked him squarely in the face, and in her glance there was neither coldness nor malice.

Bryce felt himself afire from heels to hair one instant, and cold and clammy the next, for Shirley spoke to him.

"Good morning, Mr. Cardigan." He turned, and approached her. "Good morning, Shirley," he replied. "How have you been?"

"I might have been dead, for all the interest you took in me," she replied sharply. "I'm exceedingly well—thank you. By the way, are you still beligerent?"

He nodded. "I have to be."

"Still peeved at my uncle?"

Again he nodded. "I think you're a great big grouch, Bryce Cardigan," she flared at him suddenly. "You make me unutterably weary."

"I'm sorry," he answered, "but just at present I am forced to subject you to the strain. Say a year from now, when things are different with me, I'll strive not to offend."

"I'll not be here a year from now," she warned him.

He bowed. "Then I'll go wherever you are—and bring you back." And with a mocking little grin, he lifted his hat and passed on.

CHAPTER XXI

THOUGH Buck Ogilvy was gone from Sequoia for three weeks, he was by no means forgotten. His secretary proved to be an industrious press-agent who by mail, telegraph, and long-distance telephone managed daily to keep the editor of the Sequoia "Sentinel" fully apprised of all developments in the matter of the Northern California Oregon Railroad Company—including some that had not as yet developed! The result was copious and persistent publicity for the new railroad company, and the arousing in the public mind of a genuine interest in this railroad which was to do so much for the town of Sequoia.

Colonel Seth Pennington was among those who, skeptical at first, eventually found himself gradually coerced into serious consideration of the results attendant upon the building of the road. The Colonel was naturally as suspicious as a rattlesnake in August; hence he had no sooner emerged from the ranks

of the frank scoffers than his alert mind framed the question:

"How is this new road—improbable as I know it to be—going to affect the interests of the Laguna Grande Lumber Company, if the unexpected should happen and those bunco-steerers should actually build a road from Sequoia to Grant's Pass, Oregon, and thus construct a feeder to a transcontinental line?"

Five minutes of serious reflection sufficed to bring the Colonel to the verge of panic, notwithstanding his firm belief that there was no reason why he should be frightened. Similar considerations occur to a small boy who is walking home in the dark past a cemetery.

THE vital aspects of his predicament dawned on the Colonel one night at dinner. So forcibly did they occur to him, in fact, that for the nonce he forgot that his niece was seated opposite him.

"Confound them," the Colonel murmured distinctly, "I must look into this immediately."

"Look into what, Uncle dear?" Shirley asked innocently.

"This new railroad that Ogilvy talks of building—which means, Shirley, that with Sequoia as his starting point, he is going to build a hundred and fifty miles north to connect with the main line of the Southern Pacific in Oregon."

"But wouldn't that be the finest thing that could possibly happen to Humboldt County?" she demanded.

"Undoubtedly—to Humboldt County; but to the Laguna Grande Lumber Company, in which you have something more than a sentimental interest, it would be a blow. As you know, all of my efforts are devoted to fighting anything that has a tendency to depreciate its value."

"Which reminds me, Uncle Seth, that you never discuss with me any of the matters pertaining to my business interests," she suggested.

He beamed upon her with his patronizing and indulgent smile. "There is no reason why you should puzzle that pretty head of yours with business affairs while I am on the job," he answered. "However, since you desire to have this railroad situation explained to you, I will do so. I am not interested in seeing a feeder built from Sequoia north to connect with the Southern Pacific, but I am tremendously interested in seeing a feeder built south toward San Francisco, to connect with the Northwestern Pacific."

"Why?"

"For cold business reasons, my dear." He hesitated, and then resumed: "A few months ago I would not have told you what I am about to tell you, Shirley, for the reason it seemed then you were destined to become friendly with young Cardigan."

Shirley blushed, and her uncle chuckled good-naturedly. "Fortunately," he continued, "Bryce Cardigan had the misfortune to show himself to you in his true colors, and you had the good sense to dismiss him. Consequently I see no reason why I should not explain to you now what I considered it the part of wisdom to withhold from you at that time."

"Do go on, Uncle Seth. I'm tremendously interested," averred Shirley.

"Shortly after I launched the Laguna Grande Lumber Company—in which, as your guardian and executor of your father's estate, I deemed it wise to invest part of your inheritance

—I found myself forced to seek further for sound investments for your surplus funds. Now, good timber, bought cheap, inevitably will be sold dear. Old John Cardigan had some twenty thousand acres of the finest redwood timber which had cost him an average price of less than fifty cents per thousand.

"Well, in this instance the old man had overreached himself, and finding it necessary to increase his working capital, he incorporated his holdings into the Cardigan Redwood Lumber Company and floated a bond issue of a million dollars. I invested for you three hundred thousand dollars in Cardigan bonds. I bought them at eighty, and they were worth two hundred; at least, they would have been worth two hundred under my management—"

"How did you manage to buy them so cheap?" she interrupted.

"Old Cardigan had had a long run of bad luck. From time to time I discovered bondholders who needed money and hence unloaded at a sacrifice; but by far the majority were owned by local people who had lost confidence in John Cardigan and the future of the redwood lumber industry. You understand, do you not?"

"I do not understand what all this has to do with a railroad."

"Very well—I shall proceed to explain." He held up his index finger. "Item one: For years old John Cardigan has rendered valueless, because inaccessible, twenty-five hundred acres of Laguna Grande timber on Squaw Creek. His absurd Valley of the Giants blocks the outlet, and of course he persisted in refusing me a right of way in order to force me to sell him that Squaw Creek timber at his price."

"Yes," Shirley agreed, "I dare say that was his object. Was it reprehensible of him, Uncle Seth?"

"Not a bit, my dear. He was simply playing the cold game of business. I would have done the same thing had the situation been reversed. We played a game together—and I admit that he won, fairly and squarely."

"Then why is it that you feel such resentment against him?"

"Oh, I don't resent the old fool, Shirley. He merely annoys me. I suppose I feel a certain natural chagrin at having been beaten, and in consequence cherish an equally natural desire to pay the old schemer back in his own coin. Such action on my part is perfectly permissible, is it not?"

"Yes," she agreed frankly, "I think it is, Uncle Seth. Certainly, if he blocked you and rendered your timber valueless, there is no reason why, if you have the opportunity you should not block him—and render his timber valueless."

THE Colonel banged the table with his fist so heartily that the silver fairly leaped. "Spoken like a man!" he declared. "I have the opportunity and am proceeding to impress the Cardigans with the truth of the old saying that every dog must have his day. When Cardigan's contract with our road for hauling his logs expires next year, I am not going to renew it—at least not until I have forced him to make me the concessions I desire, and certainly not at the present ruinous freight-rate."

"Then," said Shirley eagerly, "if you got a right of way through his Valley of the Giants, you would renew the contract he has with you for the hauling of his logs, would you not?"

"I would have before young Cardigan raised such Hades that day in the logging-camp, before old Cardigan

sold his Valley of the Giants to another burglar—and before I had evidence that neither of the Cardigans knows enough about managing a sawmill and selling lumber to guarantee a reasonable profit and pay the interest on their bonded and floating indebtedness. Shirley, I bought those bonds for you because I thought old Cardigan knew his business and would make the bonds worth par. Instead, the Cardigan Company is tottering on the verge of bankruptcy; the bonds I purchased for you are now worth less than I paid for them, and by next year the Cardigans will default on the interest.

"So I'm going to sit tight and decline to have business dealings with the Cardigans. When their hauling contract expires, I shall not renew it; so they will automatically go out of the lumber business and into the hands of a receiver; and since you are the largest individual stockholder, I, representing you and a number of minor bondholders, will dominate the executive committee of the bondholders when they meet to consider what shall be done when the Cardigans default. I shall then have myself appointed receiver for the Cardigan Redwood Lumber Company, and see for myself whether or no there is a possibility of working it out of the jam it is in and saving you a loss on your bonds."

"I MUST pursue this course, my dear. In justice to you and the other bondholders. If, on the other hand, I find the situation hopeless I shall recommend to the bank that the property be sold at public auction to the highest bidder to reimburse the bondholders. Of course," he hastened to add, "if the property sells for more than the corporation owes such excess will then in due course be turned over to the Cardigans."

"Is it likely to do this?" Shirley queried anxiously.

"It is possible, but scarcely probable," he answered dryly. "I have in mind, under those circumstances, bidding the property in and merging it with our holdings."

"But what will the Cardigans do then, Uncle Seth?"

"Well, long before the necessity arises, the old man will have been gathered to the bosom of Abraham; and young Cardigan can then go to work for a living."

"Would you give him employment, Uncle Seth?"

"I would not. Do you think I'm crazy, Shirley? Remember, my dear, there is no sentiment in business."

"I think I understand, Uncle Seth—with the exception of what effect the building of the N. C. O. has upon your plans."

"Item two," he challenged, and ticked it off on his middle finger. "The Cardigan Redwood Lumber Company owns two fine bodies of redwood timber widely separated—one to the south in the San Hedrin watershed, at present practically valueless because inaccessible, and the other to the north of Sequoia, immediately adjoining our holdings in Township Nine and valuable because of its accessibility." He paused a moment and looked at her smilingly. "The logging railroad of our corporation, the Laguna Grande Lumber Company, makes it accessible. Now, while the building of the N. C. O. would be a grand thing for the county in general, we can get along without it because it doesn't help us out particularly. We already have a railroad running from our timber to tidewater."

"I think I understand, Uncle Seth."

(Continued on page 203)

WHAT HAS HAPPENED IN "THE VALLEY OF THE GIANTS"

THE struggle between old John Cardigan, pioneer in the redwoods country, and Colonel Seth Pennington, rival operator, has centered around the Valley of the Giants, Cardigan's favorite grove which blocks the Colonel's holdings.

It seems as though the feud has descended to young Cardigan and the Colonel's niece, Shirley Sumner. But the latter, angered by her uncle's unscrupulous methods secretly buys the Valley, planning to force peace. She does not know that Bryce is about to parallel Pennington's logging road, as a last desperate measure to save the Cardigan fortunes.

The Two-Stage Amplifier

Increasing The Sensitiveness of the Detector Set

NOW that many readers of the American Agriculturist have their single-tube regenerative receivers in operation, requests have come in for a suitable two-stage amplifier for use in conjunction with them. The amplifier described this week is not only applicable to the tube receiver which appeared in the issue of February 3, but to any other form of commercial or home-made one-tube receiver.

What will such an amplifier do for a receiving outfit? Will it increase the receiving distance? No, not very much, but it will greatly increase the strength of signals which can already be heard with the detector tube alone. If a faint whisper can now be picked up on the detector tube from station PWX, let us say, the amplifier will bring up the volume so that it may be heard five or six feet from the receivers, and where signals are strong on the detector alone, a loud speaker may be used to enable the whole family to "listen in" together. Or the phonograph may be pressed into with the regular headphones and a phonograph-radio attachment to the tone arm so that a large-

posts at the right end of the amplifier. Those at the left side are for the loud speaker. It is the usual practice to mount the transformers on the wooden base to which the panel is attached, and this same procedure may be followed with the tube sockets. The left jack, or that one used for the second stage of amplification, is marked "I" and "O," to distinguish the inside and outside springs. A double jack has four springs, the inside springs of the first two jacks are connected to the primary windings of the transformers. On the diagram will be found the proper transformer connections. Some transformers are not marked as is there indicated. In such cases, P₁ and P₂ will be shown as P and B; while S₁ and S₂ are stamped G and F.

Mounting the Parts

It is best to mount all the parts securely on the panel before any wiring is done, although if desired, the parts may be placed on a board and connected up in that manner. All joints except those beneath binding posts should be well soldered. Parts should not be

Diagram of a two-stage amplifier to attach to the regenerative set described in the American Agriculturist of February 3

sized room may be filled with music. When dance music is broadcast, a distinct novelty is provided for family and friends in the form of a "radio" dance. Some find headphones irksome, and will appreciate the freedom where an amplifier and loud speaker are put into use.

Parts Needed

The approximate cost of the amplifier, all told, will be about \$35. Supposing that the parts will be mounted on a panel, the apparatus needed is as follows:

- 2 tube sockets.
- 2 rheostats.
- 3 double-circuit jacks.
- 2 Audio Frequency transformers.
- 8 binding posts.
- 5 lengths bus wire for connections.
- 1 panel, hard rubber or bakelite, about 7 x 12 inches.
- 2 amplifier tubes.
- 1 45-volt "B" battery.

The transformers are perhaps the most important parts of the amplifier, and should cost about four dollars each. WD-11 tubes, if available, may be used for the amplifier, and in that case special sockets will be needed, or the standard socket, used with a WD-11 adapter. Results will not be quite so loud as with Radiotron tubes, however. Standard tubes may be used with success in an amplifier for a set in which WD-11 tube is the detector. In that case both "A" and "B" batteries are separate, though where the detector is a 6-volt tube as well, the same "A," or 6-volt storage battery, is used for both. The "B" battery is separate.

Explaining the Diagram

In the figure is shown a pictorial view of an amplifier as it would appear from behind the panel. Three double-circuit phone jacks are used, and the connections from the binding posts of the receiving set now used for the telephone headset are made to the two

crowded, and the two transformers should be mounted at right angles to each other to minimize chances for holding due to induction between their windings. The lead wire from the grid of the socket to the transformer should be extremely short, an inch or two.

After the connections to the "A" and "B" batteries have been made, and the tubes lighted, the rheostats should be turned on far enough to light the tubes with fair brilliancy in the case of Radiotrons, and with a dull red glow for WD-11 tubes. Proper brilliancy is indicated by a bell-like ringing sound in the phones when the tube is tapped lightly with the finger. The phones may be plugged into the first jack, when the detector alone is in use, and the set tuned in the usual manner. Then the first stage may be added, and perhaps a slight readjustment will be necessary. The leads to the tuning portion of the set should be reversed as a trial and left in the best position.

The Valley of the Giants

(Continued from page 202)

When Cardigan's hauling contract with our road expires, his timber in Township Nine will depreciate because it will no longer be accessible, while our timber, being still accessible, retains its value.

"Exactly. And to be perfectly frank with you, Shirley, I do not want Cardigan's timber in Township Nine given back its value through the N. C. O. If that road is not built, Cardigan's timber in Township Nine will be valuable to us, but not to another living soul. Moreover, the Trinidad Redwood Timber Company has a raft of fine timber still farther north, and if this infernal N. C. O. isn't built, we'll be enabled to buy that timber pretty cheap one of these bright days, too."

The Story of a Busy Woman's Garden

Sheba Childs Hargreaves Tells How It Was Planned and How It Grew

TO be happy I must have flowers about me, but my days are full; there is no time to give to blooms which require constant petting, so I have finally settled on a definite flower-garden policy. My plan is simplicity itself. I have chosen a plot of ground 20x40 feet in a location handy to my kitchen door, where I can slip out in odd moments to weed or hoe. The flowers can be plainly seen from the kitchen windows and on warm days the spicy fragrance floats in and lightens my labor wonderfully.

I prevailed upon friend husband to spade in a lavish quantity of well-rotted cow manure, and to put the plot in first-class shape for me, so that the later labor would be as light as possible. This was done in the fall, when a few of the hardier plants were set in place. In the spring the plot was deeply spaded again.

I had two well-defined aims in view—to grow only flowers which could be depended upon to give a maximum amount of bloom for a minimum amount of labor, and to alternate varieties so that from early spring until the first killing frost my garden would be a riot of bloom. I love wild colors in a garden, so did not labor much over a color scheme beyond planting yellows and reds and hard blues far enough apart to keep the peace.

Plan Flower Grouping Carefully

I made my garden first on paper, grouping the plants in regard to their cultural requirements as well as to their time of blooming. The planting was done in straight rows three feet apart across the plot, so that the head of the family could run the wheel hoe through it when he was cultivating the vegetable garden and thus relieve me of the hard handwork which is made necessary by irregular mass planting.

My selection was confined mainly to hardy perennials, with a few quick-growing annuals for fillers. First, I set a border of old-fashioned sweet June pinks all the way around—they were in white and two shades of pink. They were for fragrance—mignonette and sweet allysum were depended upon when the pinks were not in bloom. I love smelly things in a garden, and it must be confessed that the old-fashioned flowers have been improved in size and color at the expense of fragrance.

It was necessary to group the flowers which take a good, long rest after blooming, so that they would not receive water during the summer. Iris, daffodils and Candidum lilies were placed together. The iris came first, alternating with rows of daffodils chosen to run the gamut of color and to bloom as long as it was "open season" for daffodils. The iris were ecstasies of color during their season, and through the summer their sword-like leaves were pleasing both in the garden and for cutting for foliage.

My Madonna or Candidum lilies came next—they are my choicest possessions; I have 40 large, fat bulbs—think of owning 40 Madonna lilies; they represent some ten years of lily conservation and thrift. I set the bulbs ten inches apart, with 18 inches between rows. They were a delight during their two weeks of bloom, but had to be cut down and allowed to rest immediately after; this barren spot was not pleasing, but this concession has to be made to lilies; they separate and grow thin and spindling if given water after they bloom.

Farther along in the plot I have a few bulbs of the liliun auratum, the sacred lily of Japan, sometimes known as the gold-banded lily; it, together with liliun rubrum, is a late summer bloomer, and so requires constant cultivation and plenty of water. I am planning to buy more lilies with my cigar money.

Do not get the idea that I am an ultra-modern woman trying to break myself of the smoking habit. I have never smoked, neither do I intend to begin, but my life partner indulges, and I hold that I have a right to spend as much money foolishly as he does, so

will not tolerate any root division, but they will last three or four seasons. I fertilize mine with coal ashes and mulch them with straw, which is spaded in the spring. Well-rotted cow manure is the best fertilizer for all the perennials, though some of them like a good handful of bone meal worked into the roots each spring.

Old-Fashioned Standbys Included

I have quantities of daisy-like perennials—double English daisies, doricum, coreopsis and giallardia, each in its season. These flowers require very little care, but must be divided often to keep them on the "reservation." By alternating the rows of this type of perennials with those which are strictly summer bloomers my garden was never "dog-eared" or shabby last summer.

Snapdragons are lovely with their soft pastel shades; they grow easily and last two or three years if they do not winter-kill. The hardy fox are also a delight. Then there are the perennial Campanulas in different colors and forms. Of course, I have Oriental poppies. The different varieties must be planted apart, coming as they grow in flaming scarlet, vivid orange and soft-shell pink. Anemone Japonica is also a favorite of mine—both white and pink.

It would be impossible to tell of all the flowers I grew last season; it ended in a blaze of glory with the chrysanthemums which had been set at intervals in the rows all over the plot.

It is necessary to be hard-hearted in the matter of separating clumps, if the rows are to be wide enough to admit the wheel hoe, otherwise one has an African jungle to contend with in a few years. But the divided clumps can always be traded to advantage with other flower lovers, though there is one rule to be borne in mind—do not take roots of flowers unless you know exactly what you are getting, for choice varieties take no more room than inferior ones, but they raise the garden high above the level of the commonplace.

GROWING SALVIA PLANTS

We all like salvias. We can get them in small pots at the greenhouses, but they are a little costly if we want very many. We can just as well grow a supply from seeds by starting them early in a box, and they will make finer plants than those we can buy. The reason for this is that the florist's root cuttings, which never make as pretty plants as the well-grown seedlings, though they begin blooming when a few inches high, while the seedling plant will be a large, bushy plant before it begins to bloom.

I have grown several of the finer sorts. I like Drooping Spikes because of the peculiar droop to the tips, but Bonfire is equally pretty. There are varieties with leaves spotted with white, but I never cared for them.

Plant the seeds early in a box of soil that has been heated to kill weed seeds, for they are rather slow to germinate. Set fresh seeds from a reliable house, for you will not stand much chance of getting good seeds otherwise. Give ample room to develop and keep them growing without much check, and you will have plants ready to set when the weather is warm enough. They are heat lovers, and should not be set outside until settled warm weather.

RACHAEL RAE.

A riot of color makes this corner of the garden a delight to the eye all through the blooming season

I class my indulgences in choice flowers as "cigar money."

The hybridizer has done such good work that the choice of hardy perennials is practically unlimited. The blooming season has been extended and the colors so enriched that they fill the gardener with delight. This is particularly true of hollyhocks—I raise single and double ones in my plot in whites, reds, pinks and yellows. Delphiniums are just old-fashioned larkspurs which the plant wizard has put into perennial form. I grow them easily from seed, though the hybrids do not always come true; they are lovely in color, ranging from pure white to the deepest blue. Often the stalks are six feet high, and if cut back so that seed does not form, they bloom all summer. Delphiniums

"Where Lovely Lilies Lean"

A group of sturdy blooms which bear mute testimony to the constant care they have received

85 Pound Standard Slate Surfaced Roofing

\$2.00
Per Roll

Lay Your Own Roofing This Spring

Do it in your spare time. No experience needed. Only hammer and jack knife required. Use our standard Radio Slate-Surfaced Roofing.

Approved by Fire Underwriters
Spark proof. Fire resisting. Better protection than wood shingles. Extra durable and not affected by heat or cold.

Best Standard Quality You Can Buy
Only \$2.00 per roll (enough to cover 100 sq. ft.). For old or new roofs, or over old wood shingles.

Red or Green
Non-fading crushed slate surface beautifies as well as protects your home. Guaranteed for 15 years but should last longer.

Send for FREESAMPLES
It puts you under no obligation to buy. \$2.00 per roll includes all nails and cement. (Add 8c if wanted with extra long nails.)

Shipped from Chicago, Kansas City, St. Paul; York, Pa.; Southern, Ill.; or New Orleans, La. (\$2.10 per roll from Kansas City or St. Paul.)

Keep Your Promises!

Jean Howard Recalls Bitter Experiences

A RECENT little verse in the "A. A." touched a chord of memory in my own experience. The lines ran:

"Son's pig—and daddy's sow,
Son's calf—and daddy's cow."

In my case it was "daughter's" pig, calf, colt, etc. When the little runt pigs, too weak to fight for their share, or the orphans or those disowned were found, it was "Daughter, take care of that little animal, and if you raise it you may have it."

Oh! the joy of ownership to a child! How gladly I would arise during the night to warm milk for the little porkers! And the rows of corn and beds of garden truck I needed for the crisp and much relished "pusley" and other greens so succulent to piggies' taste; and the numerous trips to the woods for luscious acorns! How proud I was when the one-time scrawny runt claimed the admiration of the whole family by tipping the scales at several hundred pounds!

And then—the things that try a child's faith and innocent confidence in all humanity! "Well, daughter, your pig is the biggest and fattest, so we will butcher it."

Broken Promises Mean Heartaches

If parents could realize, even in part, a child's feelings at such a time, there would be fewer heartaches and disappointments that leave scars for many long years. Ever since I had understood money, I had wanted my own bank account so I could write my own checks. But now—where were all

those nice, useful things which were to have been purchased with the money brought by that big fat pet? Instead of going proudly to the local bank to deposit the returns it was a sorrowful trip to the woods (nature's healer of heartaches), to be out of sight and sound when the killing took place.

And the little calf—that my childish heart dreamed of as the foundation of a future herd,—where was it? Driven to market with Dad's and the proceeds lumped in with his for the purchase of new machinery. And at sight of my tears it was always "Never mind, daughter, I'll give you another one some day, and you can do as you please with it."

And the orphan colt I raised "by hand" and loved as a dear chum that he was? It went the same way to swell the ache of a child's trusting heart—and father's bank account as well. Parents, do realize that your boy and your girl love to feel that they really own things thus given them—animals which would otherwise have died but for their care and attention! I can testify (and I do not stand alone) that the scars thus caused remain long in a childish heart, while faith is lost in those who should be nearest and dearest.

Teach your children the art of spending money thus earned in some useful way, and let them learn early to rely upon their own judgment—and upon your promises! You will have finer, more self-reliant sons and daughters, and proud of the sympathy and co-operation by which their parents made their success and character possible.

Aspirin

Say "Bayer" and Insist!

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds	Headache
Toothache	Lumbago
Earache	Rheumatism
Neuralgia	Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Drug-gists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

Wells Richardson Co., Burlington, Vt.

THREE STYLES FOR DIFFERENT HOURS OF THE DAY

AN out-and-out apron, an in-between house dress and a smart frock for more formal wear this week, suggest the proper apparel for any time of the day. Best of all, they are equally smart and not at all hard to make. Try them and see!

If you are fussy about the kind of dress you wear about the house, you will like this attractive and practical style. It may be made as the popular cover-all which completely protects the garment underneath, or if you like, it is equally suitable as a house dress. Made of printed percale at 15c. per yard, with binding for trimming at 20c. a piece (6 yards in a piece); this garment would cost about 70c. Any amateur home dressmaker could make it in an afternoon.

No. 1560 is cut in sizes 36, 40, 44 and 48 inches bust measure. Size 36 requires 3 1/4 yards 36-inch material with 3 yards binding. Price 12c. stamps or coin; (stamps preferred).

Of Chinese origin are the wide sleeves that narrow at the elbow of this smart, new frock, patterns for which are obtainable in sizes 16 years, 36 and 38 inches bust measure. To make the dress with the pleated flounces in the 36-inch size will require 7 1/2 yards 40-inch material. With gathered flounces, of course, less material is required. Pattern 12c. stamps or coin. The sleeves are cut in one with the side front and side back. The dress is made to close on the left shoulder. Crêpe de Chine and satin-faced Canton crêpe are good choices of material for No. 1664.

1560

A touch of daintiness in the embroidery motive, applied to waist and pockets, sets this apron apart from its more prosaic fellows as rather smart and pretty. Yet it is just as easy to make as a more commonplace one. Doesn't the family which sees you so often in the kitchen deserve to see you wear a becoming, graceful style for your work-a-day clothes?

No. 1435 cuts in sizes 36, 40 and 44 inches bust measure. Size 36 requires 2 1/4 yards 36-inch material with 6 yards binding. Price 12c. stamps or coin. Transfer pattern No. 622—in blue only—12c.

From A to Z in home dressmaking! Our Spring Book of Fashions

is just about as useful a catalogue as you could imagine. Put it on your sewing table beside your work basket; you will find it thumbed and studied every day. Not just pictures of patterns—though there are plenty of them—but sewing lessons, embroidery designs, pictures of the dresses made up, advice in choosing colors and lines—every possible question of the home-dressmaker is answered briefly and clearly.

It's only 10 cents. That seems a bargain, and it is. Add the amount to your pattern order, and after looking over your order to be sure you have sizes, numbers and your address right, mail it to Fashion Department, American Agriculturist, 461-4th Avenue, N. Y. C.

Reviewing the Latest Eastern Markets

MEANING OF MARKET QUOTATIONS

HERSCHEL H. JONES

ONE of the readers of this page recently asked just what the wholesale prices quoted here mean. "How can the farmer judge from them what the price should be f. o. b. his shipping point?" All the wholesale quotations on this page represent prices paid to original receivers, by jobbers, retailers or other wholesale dealers. On commission sales the returns to the shipper are these prices minus freight, cartage and commission. Such charges as an inspection fee for examination of dressed meat by the health department are usually deducted from the returns.

To compare these New York market prices with your local shipping point prices, find out the freight rate from your local agent, then deduct from the price quoted, the freight on that quantity, the customary commission charge and customary loading charges at your end. Cartage is not a large factor per unit. The usual commission on eggs and poultry is 5 per cent, on fruits and vegetables 10 per cent, on hay \$1.50 @ \$2 per ton. With hay you do not have cartage to pay but frequently have demurrage or storage.

CABBAGE REACHES \$55

No one could have foretold the phenomenal rise in prices of state old crop, white cabbage in the last month. Last week a few sales of fancy, White Danish were made at New York at \$52 @ \$55 per ton wholesale and on February 21 the best old crop Danish variety sold mostly at \$50, with ordinary quality at \$45 @ \$48. Shipments of Southern cabbage continue light and demand is extraordinarily active. The difficulty of shipping cabbage during the severe weather without freezing was the principal factor in reducing supplies and sending the market up. In our judgment, those farmers who are so situated that they can get their cabbage to market safely while the cold weather continues, will get higher prices than are likely later.

POTATO PRICES TREND UPWARD

Potatoes sold at higher levels at New York, due to a good deal of frosted stock. There has been a steady demand for fancy. Long Island's, South Side, touched the high point for the season \$1.25 per bushel to the farmer. Since there are a few cars yet unsold, this price is likely to hold firm or go even higher.

"States" due to cold weather have not been coming in freely and the carlot market in New York City has held about \$1.30 cwt. delivered for the best bulk, sacked, 150-lbs. from \$1.90 @ \$2, carlots, depending upon quality. The jobbing trade has paid from \$2.25 @ \$2.35 for fancy, poorer stock much lower, some \$1.75.

APPLE MARKET MORE ACTIVE

Owing to comparatively light supplies from Hudson River Valley and Western New York, and more active demand, the market for barreled apples advanced just before Washington's Birthday. Fruit of fancy quality large size in good condition and free from frost sold very readily.

Buyers have fought for the privilege of paying \$14 @ \$15 per barrel for fancy graded McIntosh in the last two weeks. Baldwins, A grade 2½ in. sold February 21, at \$4.75 @ \$5 per barrel, for best, \$5.25 @ \$5.50 for fancy, and \$4.25 @ \$4.50 for ordinary. Best Baldwins a year ago sold at \$7.25 @ \$8. Greenings on February 21, 1923, sold at \$4.50 @ \$5.50, mostly \$5 @ \$5.25 for best quality, whereas at this time last

year A grade Greenings of fair quality brought \$11.50 per barrel.

EGG RESERVE STOCKS LOW

Moderate arrivals of eggs on the New York market in late February maintained a good tone to the egg market, offerings clearing rapidly. The promise for egg arrivals in the closing days of February and early March was an important subject of gossip among the traders. The reserve stocks of eggs are nearly used up in anticipation of heavy spring arrivals.

At New York, nearby hennerly whites, extra fancy, uncandled, brought 48 @ 50c per dozen, other nearby extra fancy, whites, locally candled, 50c, extra, 46 @ 47c, extra firsts, 44 @ 45c,

21c. Best hot house lambs, brought \$10 @ \$14 per carcass; 30 and 60 lb. pigs sold at 14 @ 16c per lb, heavier weights much lower.

HAY TEMPORARILY SCARCE

In spite of the heavy supplies of hay still on hand in the country, the New York market was practically cleaned out of unsold stocks at all terminals last week and prices went still higher. On February 20, there was only one car received at 33rd Street. The embargo and permit restrictions of the railroads cut off shipping and advanced the market, but it is likely that as usual by the time the shipper who hears of these prices gets his hay to the market, it will be over supplied again and prices

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on February 23:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.

Sheep, common to good ewes.....	3½@5½	7@8
Hogs, Yorkers.....	9	9

firsts, 42½ @ 43½c, pullets, 39 @ 40c, extra fancy hennerly browns from New Jersey, 47 @ 48c, other extra browns, 45 @ 46c. As a matter of comparison, Pacific Coast extra whites, sold on the same market at 45 @ 46c per dozen, extra firsts, 43½ @ 44½c.

BUTTER PRICES HOLD STEADY

The higher grades of fresh creamery butter at New York, sold at steady prices; even some of the lower grades were relatively firm. Finest New York State dairy butter, brought 50½c per lb, good to prime, 48 @ 50c, common to fair, 42 @ 47½c. Fresh creamery butter, highest score, sold at 51½ @ 52c, 92 score, 50¼ @ 51c, firsts, 49 @ 50½c.

FIRMER TONE ON FANCY CHEESE

With supply no larger than demanded for absorption by the market, New York State whole milk cheese was firm at 28½ @ 29c per lb, for special, 28c for average run. Fair to good whole milk flats, sold at 26 @ 27c per lb. Wisconsin whole milk twins, held, brought 27½c, fresh Daisies, 26¼ @ 26½c, New York State skims, 21½ @ 22c.

DRESSED POULTRY STEADY

The third week in February showed some improvement in the dressed poultry trade, possibly due to the holiday on February 22. Prices were steady, except on large size fowls, which were in relatively heavy supply. New York State and nearby dry picked fowls by the bbl, 5 lbs and over, sold at 31 @ 32c per lb, 4 lbs 30c; 3½ lbs and under, 24 @ 29c, dry picked roasting chickens, medium weights, 32 @ 36c.

Live poultry receipts were irregular causing considerable fluctuation in the market prices, sometimes of as much as 2c per lb. on succeeding days.

CHOICE DRESSED MEATS HIGHER

At New York, country dressed veals sold well on a firm market: prices 1 cent higher than in mid-February. Choice veal calves went at 25 @ 26c per lb. prime, 22 @ 23c, fair to good, 18 @

down. The best time for shipping hay to New York, however, will undoubtedly be between now and opening of navigation on the Hudson and canals.

STEERS MEET FAIR DEMAND

At New York, beef animals were in fair demand, prices continuing steady. Good steers all sold at \$9.75 per cwt, medium grades, \$1 @ \$1.65 lower, medium to choice bulls went at \$5 @ \$6.50, choice cows up to \$5.50. One group of Pa. steers weighing 1,273 each brought \$9.75 per cwt. Market on calves was active and strong with good to choice veals, going at \$13.50 @ \$17. Some irregularity existed in the hog market. Prices uneven. Medium to light weight animals were quoted at \$9.25 @ 9.35 per cwt, pigs, \$9.15 @ \$9.25, heavy animals, \$8.75 @ \$9.

Little change was recorded in the sheep market. Wethers sold at, \$4.50 cwt, with some fancy animals going as high as \$7.50. Lambs of the better sort, brought \$15.25 @ \$15.50.

FEEDS HOLD FIRM

The Buffalo feed market was less active last week, but prices held firm, with some further advances in mill feeds. Quotations on carlots f. o. b. Buffalo in 100-lb. sacks, Feb. 21, were:

Gluten feed, \$46.50 @ 47 per ton; Cottonseed meal 36, \$48.50 @ 49; Oil meal 33%-34%, \$51 @ 51.50; Dried brewers' grains, \$49 @ 50; Standard spring bran, \$34.75 @ 35; Hard winter bran, \$35.25 @ 35.50; Choice flour middlings, \$37 @ 37.50; White hominy, \$34.80 @ 35.30; Feed grains, f. o. b. Buffalo, per bu. No. 2 yellow corn, 85c; No. 2 white oats, 53c; barley, 80 @ 82c; rye, 76 @ 78c.

GRAIN MARKET FEVERISH

Prices of grains fluctuated up and down in the most feverish manner last week, as first "bulls," then "bears," held sway but the future trading did affect cash grain very much. Cash grain quotations, February 21, follow:

At New York—Wheat, No. 2 hard winter, \$1.30½ per bushel; corn, No. 2 yellow, 93c; oats, No. 2 white, 57c; ordinary, white, clipped, 55 @ 57½c; rye, \$1.25; barley, 81 @ 82; buckwheat, \$1.96 @ 2.25. At Chicago—Corn, No. 2 yellow, 71½c; oats, No. 2 white, 46 @ 46½c; barley, 64 @ 73c.

FREE

The Most Interesting
and VALUABLE

STRAWBERRY BOOK EVER PUBLISHED

Do You Like Strawberries?

*Strawberries and Cream—Strawberry Shortcake—
Strawberry Jam and Preserves? Of course you do.
Everybody does.*

Then, why not plant a strawberry garden of your own this spring and let it yield enough big luscious berries fresh from the vines to take care of your family needs and make you a big cash profit besides?

Write today for our big FREE Strawberry Book and see for yourself how thousands of families are enjoying delicious Kellogg Strawberries the year 'round and many are making \$50.00 to \$150.00 cash profit each year from Kellogg Strawberry Gardens. This valuable book is written by America's foremost strawberry grower—gives his secrets of producing the big crops and big profits. Beautifully illustrated in colors and describes fully the many world-famed varieties of **KELLOGG'S THOROBRED PLANTS**. Kellogg Plants are not just ordinary plants. They are the result of over 40 years of scientific selection and breeding—the heaviest fruiting and most profitable plants grown, and often produce as much as 2 quarts of big red berries per plant in a single season.

New \$50,000 Everbearer

This wonderful book also tells about the most remarkable strawberry ever brought out—Kellogg's NEW \$50,000 ROCKHILL EVERBEARER. This new "wonder berry" which you have been reading about in the newspapers is the King of all Everbearers. Words fail to convey its prolific richness—producing bigger berries than any other everbearer now in existence, excelling any Standard variety as an early summer producer and fruiting heavily into November. Our big FREE Book tells all about it—Where it came from—Who brought it—How long it took to get it—Why it cost \$50,000—and Why it was worth the price.

6 Bargain Strawberry Gardens

Another very attractive feature in this year's book is the six (6) Special Strawberry Gardens we are offering at Bargain Prices, among which you will find a famous Kellogg Garden to fit every need and every pocket book. Now you can join the thousands of families who are picking Strawberries from early summer until the snow flies from Kellogg's Strawberry Gardens and making big cash profits besides. One of these special Low Price Gardens is shown here. It is a real bargain you should not pass. Order direct from this advertisement and thus insure getting yours—they will go fast. Simply put a check mark in the coupon if you want the garden—enclose check, draft or money order for the amount and it will be delivered right to your door, all charges prepaid, at planting time.

☐ Kellogg's Everbearing Garden — Price only \$4.35.

Only
\$4.35
DELIVERED

Kellogg's Everbearing Garden

This special priced Everbearing Strawberry Garden set this spring will give you loads of big, delicious, ripe strawberries this year from mid-summer right up until heavy freezing weather. Next year it will yield almost a continual crop of big red beauties from early June until snow flies. It will supply your family with strawberries fresh from the vines throughout the summer and fall—a generous supply of canned berries, jam, preserves and jelly for the winter and in addition, if your family is not too large, there will be a goodly quantity of big fancy berries left to sell to your neighbors and friends. This garden occupies space about 20 x 25 feet and consists of

200 Progressive Everbearing Plants

Progressive is the Universal Everbearer—the old reliable variety that produces big crops in any climate and all soils. The regular list price of this garden is \$4.85. Our special reduced price only \$4.35, delivered. Just write your name and address in the coupon, enclose check, draft or money order and garden will be shipped to you at planting time, all charges paid. We will also send you a copy of our big new strawberry book containing instructions for planting. Order direct from this ad and save time.

Send for the Book

Whether you order this Bargain Strawberry garden or not, do not fail to send for our New 1923 Strawberry Book—it is absolutely FREE and postpaid. Stop paying high prices for Strawberries to eat, can or preserve. Get our book and see how easy and profitable it is to grow your own big red berries. Just fill out coupon—or your name and address on a post card will do. Write for your copy today. It's FREE.

AMERICAN AGRICULTURIST

\$1.00 A YEAR

March 10, 1923

5 CENTS A WEEK

"If You're Goin' to Ride, Don't Drag Your Feet!"

The Handwriting on the Hay Market Wall—By C. F. Ladd

BACK OF THE HEEL—Eleven layers of heavy duck and highest grade rubber make this one of the strongest points of the whole boot.

THE ANKLE—Here's where so many boots sag and crack. The "U. S." Boot has an extra "collar" that runs all the way round the leg, and on top of that is vulcanized a heavy side-stay.

Extra heavy flange sole

THE SOLE—A thick, single layer of the finest, toughest high-grade rubber. Its flange shape means extra protection and wear. A rugged outside foxing unites the sole and the upper into one solid piece.

THE INSTEP—A boot has no lacing in front, like a shoe, to give as you walk. Every mile you go, the rubber bends and buckles 900 times. We've put a series of graduated reinforcing layers into the instep, combining unusual flexibility with surprising strength.

They guard against breaks

The "U.S." reinforcements that insure extra wear

THERE are four places in a boot where the strain is worst—ankle, back of the heel, instep, sole. And a weakness of construction at any one of them will rob you of wear you ought to get.

A break at one of these vital points and the boot is no longer waterproof.

"U.S." Boots are built to avoid just this sort of thing. At every point where these strains occur, from *seven* to *eleven* extra re-inforcing layers of fabric and tough rubber are built into every pair!

No wonder they stand up!

The diagrams at the left will show you just *how* U. S. Boots are built. Notice the strong reinforcements built into the very wall of the boot.

The construction of U. S. Boots is the result of 75 years of experience in boot making. Light enough for solid comfort—yet strong enough for the hardest tests you can give them—it

takes years of experience to make a boot like that!

Other "U. S." Footwear—all built to give the utmost service

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. lace Bootee, a rubber workshoe for spring and fall—U. S. Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." trademark before you buy—the honor mark of the oldest rubber organization in the world.

The Handwriting on the Hay Market Wall

How Shall We Reorganize Our Business To Meet the Decreased Demand?

TIMOTHY hay has for years been one of our best cash crops in the North-eastern States. Our cool climate, abundant rainfall, and natural grass soils make this region a great pasture and hay region. The acreage of tillable land, however, will support a much larger live-stock population than our pastures will feed through the summer, so we normally raise a surplus of hay. Moreover, we have at our doors the great Eastern cities that need our surplus hay for their horses.

Hay is a bulky product. A car-load ordinarily contains only ten or twelve tons. The cost of shipping a ton of hay even a short distance is very high compared with its value. For this reason hay cannot be shipped long distances without the freight eating up the entire value of the product. Freight rates for many years have been a protective wall, preventing Western hay from competing with Eastern hay in the Eastern markets.

For some years, just previous to and during the World War, hay was one of our best cash crops. Cost-account studies on farms year after year showed hay making a larger profit per hour of man labor than any other general farm crop. The one big drawback to the hay business was that a farmer could only make hay for about six weeks out of the year.

Now, for the past few years hay has been low-priced. Is this a mere temporary condition or are we faced with an era of low-priced hay?

In the winter of 1911-12 farmers sold hay up-State for \$18 per ton; in 1912-13 hay sold for only \$12 per ton on the same farms. This was largely due to a difference in rainfall during the growing season, with a consequent difference in the yield per acre. The yield of hay per acre in New York in 1911 was 1.02 tons, while in 1912 it was 1.25 tons.

Horses in Cities are
Decreasing

Is our present low hay price the result of a good yield per acre, or is there something more back of it? A large proportion of our salable hay has always gone to feed horses in cities. It is probably this proportion of our hay which has fixed the price of the product.

From 1909 to 1919 the

By C. E. LADD

number of horses in cities in New York State decreased 53 per cent, according to the United States Census. More than half of the city horses were replaced by automobiles or trucks in this ten-year period. Some men, however, have stated that the change from horses to trucks stopped in 1919, and that since that

TABLE SHOWING DECREASE IN THE NUMBER OF HORSES IN CITIES AND ON FARMS IN NEW YORK STATE SINCE 1909 CENSUS PERIOD

Number of horses in cities in New York State, 1909	303,256
" " " " " " 1919	141,648
Number of horses in New York City, 1917	108,036
" " " " " " 1917	75,740
" " " " " " 1921	65,126
Number of horses on farms in New York State, 1909	717,000
" " " " " " 1921	520,000

date horses have increased in cities. It is always dangerous to generalize from a few observations, because we are so liable to observe the unusual rather than the usual thing.

The only available figures to show changes in horse population since 1919 are the reports of the New York City Bureau of Health, which makes a periodical census of the horses in that city. This report indicates that horses in New York City decreased still further from 1919 to 1921. If the same amount of decrease took place in the other cities, then we had only 40 per cent as many horses in cities in 1921 as we had in 1909. This is a tremendous change and must result in a greatly lessened demand for hay.

What are we as hay producers going to do about it? Our hay market will be good again only when the available supply of salable hay is decreased until it just about equals this lessened demand. Shall we carry along an unprofitable business year after year, consoling ourselves each year with the hope that some day the market will be better? Or shall we make a reorganization of

our cropping system so as to adjust supply to demand at once and get our hay production on a profitable basis again? The first method calls for a slow starving out until the final adjustment comes. The second method calls for an intelligent change in our cropping system at once which should give quick results.

What Can We Raise in Place of Hay?

For the general farmer who has made his hay sale only a minor part of his business, the change is comparatively easy. A

slight increase in live stock may use up the surplus hay. A slight increase in other cash crops and a shortening of the rotation by plowing up sod ground one year earlier than usual will make a sufficient change.

This period of low hay prices should result in shortening our average rotation period and should result in a great deal of poor hay being plowed under as a green manure crop. This may result in increased soil fertility and better crop production per acre.

In northern New York, along the St. Lawrence River, and in various other sections of the State there are considerable areas of heavy clay land which are well adapted for practically no crops except hay and oats. A

large proportion of this land is tillable, and the permanent pasture is limited in area. Probably the salable hay of the future will be produced in such regions. It is quite likely, however, that they too will need to decrease their production of hay for sale and build up some other farm sale to take its place. Until the adjustment in hay acreage comes, it will probably be necessary for these heavy clay regions to shift their type of farming or else go through a period of very low profits.

These clay lands do not have much opportunity for change. About the only possibility open to them is to increase their live-stock enterprises, chiefly dairy cattle. This

VOL. 111 March 10, 1923 NO. 10

District Superintendents and the School Bill

WHY are there several of the school-district superintendents so active in their opposition to the suggestions for school improvement made by the Committee of Twenty-one? Is it because of any real interest in the educational welfare of the country boys and girls, or because of a selfish desire to maintain their own jobs?

There are a large number of sincere capable men and women acting as district superintendents of schools. Some of these have gone as far as to publicly state that should the educational interests of country children require a change in school supervision, they would be the first to resign their jobs. The schools will always have need for such men and women. But there is another kind of superintendent of small ability and poorly trained, obtaining and holding his job by old-fashioned political methods. These men always work hard to defeat progressive measures which might put better supervisors in their places and give the people more real control of their schools with a correspondingly better educational chance for the children.

It is this class who have been using every opportunity to circulate written matter and to talk to individuals in small groups in an effort to give rural people an incorrect knowledge of the recommendations for school improvement made by the Committee of Twenty-one. These superintendents have been rather bold in their efforts against suggested changes in the school law because they have felt that they had the support of two or three men in the Education Department at Albany who are and always have been enemies of all progress, and who desire to continue to keep the control out of the hands of the rural-school patrons. We are

glad to say that such men in the department are very greatly in the minority, and that the department as a whole is working hard and well to serve the boys and girls, but minorities can make a lot of noise and do a lot of damage.

There is much propaganda afloat to the effect that the proposed school bill, containing the suggestions of the Committee of Twenty-one, will force school consolidation. Such statements are absolutely false. Under the present system, which some of the superintendents seem so anxious to maintain, they and the Education Department can force a consolidation of any rural school in the State, and they have done so against the bitter opposition of the school patrons concerned. If the proposed bill now in the Legislature is passed, the boundaries of rural districts as they are now will remain the same and cannot be changed except by local vote.

Under the present law the people elect school directors whose only function is to elect a district superintendent once in five years. These school directors have absolutely no control over the superintendent, and he follows the instructions of the Education Department implicitly. It is right that in educational functions the department should guide, but in matters of administration the people should have a voice. In the proposed bill the superintendent will be elected, after his present term expires, by the district board, and will be responsible in the execution of his duties to that board and through it to local school patrons. Knowing this, can you not see the motive in the minds of some of the superintendents who are fighting the new legislation?

Some of the enemies of school progress and some sincere people are saying also that people are not well informed in regard to the proposed legislation. If they are not, they never will be. For three years the Committee of Twenty-one and its recommendations has been discussed in New York State. At least fifteen hundred local meetings have been held, and the papers have been full of the subject. There never was a piece of legislation that has had more preliminary discussion than the present rural-school bill.

While this bill is long, there are, after all, only a few fundamental principles to keep in mind. If you can agree with these, details can be changed and worked out. First among these suggestions incorporated in the bill sponsored by the Committee of Twenty-one is the principle of local control by school patrons. By it, if you want consolidation, you can have it. If not, no one can put it over on your district, and the same is true of many other principles of school administration. The bill calls for better-trained country teachers and more State aid to such teachers and to the rural schools that need it. Provision is made for an equalization of tax rate, so that the unfair present situation cannot exist, whereby the farmers in one district pay from two to twenty times as much for the same school facilities as is paid in an adjoining district.

Now is the time for you to decide what the future of the country school is to be. Will you take the recommendations of a committee containing a majority of your representatives which has unselfishly worked for three years for your interest and for your children, or will you allow the prejudiced statements and propaganda of the opponents of this bill and educational progress to defeat it for selfish and unworthy reasons?

No Price Fixing of Any Kind

PRESIDENT HARDING'S Ship Subsidy Bill has been defeated. This is as it should be. Both the National Grange and the American Farm Bureau have gone on record opposing this plan of the Govern-

ment's paying ship owners to operate their vessels.

Right along the same line Senator Gooding has introduced a bill, which has been reported favorably by the Senate Committee on Agriculture, to have the Federal Government standardize the price of wheat at \$1.75 per bushel. In other words, this bill would subsidize the wheat growers. Fortunately, it has no chance of passing.

The bitter experiences of the war, and since, ought to have proven that there could be no interference with the law of supply and demand without sooner or later bringing disastrous results. Price fixing or any other forms of subsidy do interfere with the law of supply and demand. They are uneconomic, dangerous, and in the end will cause more trouble than any temporary relief they can produce.

Hay as a Cash Crop

PROFESSOR LADD, in his article on the first page of this issue, has raised a most interesting and important question on the future of the hay market in the East. The market for hay has depended in the past largely upon the large number of horses used in the cities. It is plain, therefore, that with the partial elimination of the horse by the automobile the demand for market hay must decrease.

Thousands of farmers have found hay a very profitable cash crop. Even where much hay is consumed at home, the few tons of surplus high-grade timothy have added a little welcome cash when it was much needed. The high freight rates have helped to give the Eastern farmer an advantage over his Western brother in marketing hay, but even this advantage has not offset the rapidly declining demand.

The question is: Shall we change the farm practice to find some cash crop in the place of hay, and, if so, how? This is not a simple problem, because if we plow more to get some other cash crop we are almost sure to create unprofitable surpluses along other lines. Possibly the real solution is to raise more leguminous hay instead of timothy for consumption on the farm, and if any more plowing is done to raise more home-grown grain instead of buying so much from the West.

State Votes for Coliseum

THE New York State Legislature has passed and Governor Smith has signed the bill for the erection of a Coliseum Building on the State Fair Grounds.

The erection of the Coliseum was one of the conditions demanded by the World's Dairy Congress for coming to New York State and to Syracuse. Therefore farmers of the East are now assured that the National Dairy Show and the World's Dairy Congress, which will be the greatest dairy show of its kind, is to convene in the heart of the Eastern dairy district, at Syracuse.

American Agriculturist has worked hard from the first to get this World Show to come to New York State, believing that it will help to advance and emphasize the importance of the Eastern dairy industry. We are, therefore, naturally pleased that its coming is now assured.

Work on the Coliseum is to begin as soon as the frost is out of the ground, and it will be completed probably in time for the State Fair in September, certainly in time for the Dairy Show, which is to meet a month later. The building will have a seating capacity of nearly 6,000 persons, and it will give the State Fair Grounds much-needed facilities for the judging of cattle, for holding of great cattle sales, and for great farm meetings, where the people can be seated under cover.

"We Are Living in a New Era"

Times Have Changed; Has The Church Been Growing With Them?

AS many opinions as there are churches—that was our first impression on reading the letters about modern religion. Some letters which did not win prizes contained such excellent points that we decided to pass them on to our readers for further thought on the subject.

Not all the writers on the country-church problem agree with the subscriber whose comment on modern reading matter was so unfavorable. You will remember that the letter in question spoke of the flood of cheap modern literature as tending to carry the minds of the young people away from the

gram of the church. "Our rural pastors and churches have not adjusted themselves to new conditions," writes Mr. Beebe.

Claribel Maye of New York answers critics who believe the church should broaden its social activities by reminding them that the church used to be more of a community center than it is now.

"The country church was once the social center of the community. We did not have to build 'community houses,' for our gatherings were connected with the church; and babies were taken and grew up in church ways. Some years ago they began waiting until children could 'understand' before taking them to the Lord's House; and children, thinking it some new amusement, found it somewhat dull and preferred something else. So now we have a nation of pleasure seekers, and only a few have stood by the church and its works."

The Opposite Opinion

In direct contrast to this opinion is that of Jennie C. Jones of New York, who believes that the church is failing to make itself a vital part of rural life: "The country church has failed to adapt itself to the many changes which modern methods of living have brought about in the community where it is planted. The fundamental principles of the Gospel are the same to-day as preached in the Sermon on the Mount, because principles do not change, while methods do change. We are applying these changed methods to our agriculture and business, but running the churches on the same old program used two generations ago. The church must enter in our everyday life and give something besides theology and denominationalism, in order to become a vital force in present-day country life. Despite the fact that many worthwhile, helpful organizations have sprung up, there is yet no better medium than the church through which to interpret life and develop a rural community consciousness."

"Churches fail because they try to save themselves rather than the community. The community-serving church will live; but we need ministers and leaders who are in closer sympathy and understanding of rural life. There ought to be some provision made for such training."

David Grayson says: "In this roaring age of efficiency we do not long support any institution that does not set its claws deep into our common life—and hang on."

A note of optimism is sounded by Joseph S. Moss, a deacon in a New York State church, who does not believe in too sweeping a condemnation of modern practices

or in unduly idealizing the "good old days." "With all due respect to our forefathers," says Mr. Moss, whose active church experience covers a period of over fifty years, "they lived in their time. Some of them thought all infants not baptized were lost, and a good many thought it was right to have liquor. We are living in a new era. There never was a time in the history of the world when Christ's words were more fulfilled: 'By this shall all men know that ye are my disciples, if ye have love one to another.'"

But the great lack to-day is leadership, according to Mrs. I. A. Vought of Pennsylv-

Second Prize, L. F. Bishop, Clifton Springs, N. Y.

Third Prize, Mrs. Hanna Payne, Raquette Lake, N. Y.

more substantial "old-time" favorites—the Bible especially.

Mrs. Lewis Doll of Pennsylvania raises a point, however, which is in direct opposition to this attitude and which we believe has a good deal of truth in it. Speaking of the unprepared and immature men sent to be ministers of country churches, she writes: "We subscribe for some of the highest-priced literature published, and we can get better food for our minds in the comfort of our own home without the trouble of going out to church. When we farmers are better educated than these men who come to teach and lead us, how many Sundays will we waste our time listening to a discourse that carries no facts?"

Automobile Plays Its Part

Another thoughtful comment, which shows that elements which are regarded as working against the church in some places have another aspect, was made by Elbert Beebe of New York. Many letters spoke of the effect of the automobile in lessening church attendance. Mr. Beebe pointed out that it also enlarged the territory which a pastor could cover and should therefore be an asset, if rightly appreciated, in carrying out the pro-

Honorable Mention Award, Ray F. Pollard, Cobleskill, N. Y.
First Prize Award will appear on the cover of an early issue of American Agriculturist

vania, who says: "People are not less spiritual than in former years." Echoing the cry heard in other than religious professions, Mrs. Vought appeals for strong, well-trained, broad-minded men as pastors.

Give the Young People a Chance

"Many communities lack good leaders. We should have a leader in each church activity, and not leave all to one overworked leader. Give the young a very large place in all church activities. They put youth, vigor, and enthusiasm in the work. We need church buildings which have modern lighting plants, Sunday-school rooms, social, and rest rooms."

Mrs. George Gray of New York sums up the difference, as she sees it, between the ministers of other days and of the present:

"What is the trouble with the church? The churches to-day are weak because they are not doing evangelistic work."

"Dominie Weiting and his contemporaries were evangelistic, and the church held the first place in their lives. When the individual church members of to-day put 'first things first' the church will come back to its former glory and the problem will be solved."

100 Bushels Oats Per Acre—Read Below

"Side" Oats for Seed—A Heavy Yields Priced Right

IF you grow Oats—here is an ad you should read. And here is an Oats you should sow. A kind that will pay you! It is not something new—but has proven a good dependable variety by seven years' actual use throughout all Eastern and Northern States. Read of its record below:

This **Improved White Russian Oats** is medium early—makes great heads, long and well-filled. Formation of heads tends to one side of stem, the growth resembling that of a horse's mane. The straw is stiff, very stiff—does not lodge—carries well its weight of grain until fully ripe—even on the level plains of North Dakota where storms have full sway. This variety resists rust wonderfully—has suffered very little when other oats were destroyed by rust.

Grain of **Improved White Russian** is plump—very solid. There is no waste space within—the hull being very thin, and the actual kernel itself surprisingly large. This makes **Improved White Russian** an Oats of the highest feeding value. The seed is highly cleaned and re-cleaned over four machines—carries no weeds whatever. Weighs

43 lbs. per bushel (not clipped). Beautiful in appearance. Sound in germination.

The yield of **Improved White Russian** is enormous. Note the field shown above that made 100 bushels per acre. Many Eastern growers had 75 to 85-bushel yields. Space prevents, or many splendid letters from customers could be printed—letters about the yielding ability of this exceptional Oats.

Improved White Russian is hardy, prolific and profitable. It will pay you to replace your other oats with it. Results will please you. Sow three bushels-by-weight per acre. Your growing crop will doubtless attract the attention of neighbors who will be anxious buyers for seed of it for their crops next year. **Improved White Russian** will please you and pay you!

Price: (All bags free—and freight prepaid as stated below) 2 to 14 bushels at \$1.45 per bushel, 15 to 34 bushels at \$1.40 per bushel, 35 to 74 bushels at \$1.35 bushel, 75 bushels and over at \$1.30 bushel. Bags are free. We pay the freight on 10-bushels or more to any railroad station in Penna., New York, New Jersey, Ohio, Maryland, Delaware, Virginia, West Virginia, Conn., Mass., and R.I.

These offers of freight and bags are important—note them closely.

If you don't like this **Improved White Russian Seed** when you receive it, return it—and we'll do the same with your money, and pay round-trip freight. If our offer was not genuine, this paper would not print our ad. Order today.

Where Folks Travel Little

What Is to Become of Sections Like This?

IHAD thought that By J. VAN WAGENEN, JR. mainly to this particular fact.

more than 25 years of Farmers' Institute work had enabled me to see—if not all the agricultural highways and byways of our state—at least conditions representative of all of them. Recently however, I came to a locality which had all the interest and charm of novelty. It was the community of Point Peninsula. The place is a part of the North Country and by

J. VAN WAGENEN, JR.

road is thirty miles west of Watertown. The Point juts boldly out into Lake Ontario and escapes being an island only by virtue of the narrowest possible neck of land—a sandbar with a causeway and road so close to water level that when the winter gales sweep the lake, the waves sometimes pile the gravel ("shingle" as the salt water beach dwellers would say) up on the road in such quantities as to interfere with passage.

On this low, windswept peninsula are something more than 7,000 acres of land, about fifty farms, five school districts, one post office, one country store, one Grange hall and one little Methodist church, and say half a dozen houses making up the tiniest of hamlets. I forgot to ask if there was a resident physician. If not, I wonder what these farm folks do when gripped by the sudden terror of illness at midnight or when a child is to be born into the world.

East and south there are broad arms of water, north there is water and the narrow trail to the mainland but west there is only the wide expanse of the open lake—200 miles of water with only an island or two on the horizon. Eighty years ago in a speech in Congress which is still a classic of its kind, Proctor Knott characterized the Great Lakes by that happy phrase "The Unsalted Seas."

Agriculturally the Point is not bad. Indeed except for its isolation it would be reckoned among our better lands. There is little outcrop of lime rock on the higher parts and I noted some granite boulders, wandering lost rocks, brought down from the north-east by glacial ice-sheet. But on the whole it is a level, deep and rather fertile soil. There are several tractors—and tractors do not come to very rough or infertile regions. Once they tell me the Point was covered with wonderful forests and the first adventurers were lumbermen but men have been farming it now for a hundred years.

There are many cows, but only five or six silos, the meaning of this being that hay grows easily while the late spring and the relatively cool days and nights do not fit corn. On the other hand if you do grow corn it is hardly necessary to worry over early frosts because the big lake while it soaks up heat all summer so that sultry nights are unknown acts like a giant hot water bottle when the cool October nights draw on. Large bodies of water are wonderful equalizers of temperature variations and the peach and grape regions of our state owe their existence

The same reasons that render this a rather poor locality for corn, make it almost ideal for oats. The oat is a cool weather plant. Its worst enemy is burning hot days and this is the reason why Jefferson is the banner oat county of the state, growing an average of some seventy thousand acres.

The Point is on the whole level but has some roll—not the dead flatness of some of the adjacent mainland. The trees with their tendency to lean and with their branches inclining toward the east and south, testify to the sweep and persistency of the lake winds that gather force over many watery miles.

I doubt if there is another community in our state of equal size which is so isolated. In summer it is a matter of a boat or a twelve mile drive to the nearest railroad. After winter gets thoroughly settled down and the ice on the Bay gets firm and safe, you can drive across the ice from Three Mile Bay or from Chaumont—a distance in either case of six miles. This temporary winter highway over the literally trackless expanse is marked by a long straight line of cedar brush set in the ice because even to the islander accustomed to the Bay and the landmarks, it would be no joke to be caught at night or in a blinding snow storm without these friendly guides. There is another factor that must be reckoned with in crossing big sheets of ice and that is the formation of pressure ridges. Ice fields miles in extent do not remain smooth and unbroken like a frozen mill-pond. In warm thawy days ice expands like any other substance and in the case of big areas this expansion can only be taken care of by the ice buckling up into a very abrupt, definite ridge, three or four feet high and miles long. They tell me that every winter these pressure ridges occur in almost exactly the same place. We met one that was difficult to get over. In fact we drove along it for perhaps a mile until we found a place where a team could cross. Going back our driver who was a landsman declined to take the chance of crossing in the dusk so we took the road over the isthmus—a long twelve miles. I think too that he felt better when he remembered that there was good firm soil instead of water beneath him.

It is not a Benighted Community

Let me make one thing clear. This may be an isolated community but the people who came to the Institute were fully the equal of any audience you are likely to gather in the state. They were farm folk to whom you may properly apply that fine adjective "cultured" and their names were English names betraying their New England ancestry—yet another example of the qualities of the Puritan stock.

But in talking with them I found a note of pessimism regarding the future of the Point. Many of the old families who had achieved some measure of agricultural success are selling or renting their farms and going elsewhere—perhaps to educate their children—perhaps to be a little nearer to the rest of the world. And it seemed to be universal testimony that the new comers lacked the fine standards of the older generation.

Then too, there seems to be some unfortunate economic conditions. Years ago there was a great deal of barley grown and schooners tied up at the dock

Improved and Pedigreed Seed

PEDIGREED BARLEY, Cornell's two favorites. FEATHERSTON No. 7, six row. ALPHA, two row. For description see our advertisement February 17th issue or send for circular. Price, Featherston No. 7, \$2.00; Alpha, \$2.25.

PEDIGREED SEED OATS, cleaned through thoroughly equipped warehouse and treated for prevention of smut. Varieties—CORNELLIAN, VICTORY, CROWN and GOLDEN RAIN. For description see our advertisement February 17th issue or write for circular. All varieties, \$1.50 per bushel.

SEED CORN, New York State grown from selected ears in special fields.

Pedigreed CORNELL ELEVEN and Improved OIL DENT. For description see our advertisement February 17th issue or send for circular. Screened, \$3.00 per bushel. Tipped and butted for accurate planting, \$5.00 per bushel.

CERTIFIED SEED POTATOES, HIRUCO NUMBER NINES for seed plots, \$3.00 per bushel. GREEN MOUNTAINS and IRISH COBBLETS treated seed, \$3.00 per bushel. BLISS TRIUMPHS special stock treated, \$3.50. In bushel boxes, \$4.00. For description see our advertisement February 17th issue.

SOY BEANS, Black Eyebrow, an early sort. Bids fair to be most popular sort in New York and Pennsylvania. Price, \$4.50 per bushel.

HUBAM SWEET CLOVER, Scarified, high germination and purity. Grown in New York. Price, small lots, 50 cents per pound, postpaid. Bushel lots or over, 40 cents per pound.

All prices bags free, freight paid. All orders to be accompanied by 25¢ cash. 3% may be deducted if sending all cash with order.

Investigation through Farm Bureau or Agricultural Colleges invited.

HICKOX-RUMSEY CO., INC., Batavia, N. Y.

to load barley for Oswego, but this industry has gone, and for reasons unconnected with the 18th amendment. Today the main product is milk for the one cheese factory. Timothy hay grows exceptionally well, but the difficulties of marketing at present seem insuperable. The little hamlet had once two piers running out into deep water and a wharf-house where the barges loaded hay and where coal was delivered at very moderate freight rates. Now all this is gone and the grinding ice floes have carried away the timber of the dock. No one seems to know just why—but the tiny port is dead. Along the western horizon go the big freighters on their steadfast way between Chicago or Duluth and Ogdensburg or Montreal, but no more do the little steamers make Point Peninsula a port of call. It is hard to escape the feeling that somehow the Golden Age was in the past.

In the Good Old Days

In the old days every farmer was a fisherman when the famous Chaumont ciscoes came into the Bay "about election time." Once literally thousands of barrels were caught and salted. Then came a period of years when the cisco almost disappeared, but once again some very good catches have been made within the last two or three years.

I feel a particular interest in this community—these folks who are holding this particular sector of the agricultural battle front under such rather special difficulties of isolation and lack of market facilities. It has occurred to me that local cooperation might result in the ownership of a community barge which should take hay to, say Oswego and should bring back coal and lumber and fertilizers. Then too, it might be that our great Up-State Public Service Commission could order some steamboat corporation to give freight service when it was needed at rates that were not confiscatory. This is just a suggestion in behalf of a community which have more than their fair share of difficulties.

CORN FOR SILAGE

During the week of September 18, a representative of the Department of Plant Breeding of the College of Agriculture visited the fields of a Farmers' Cooperative Association near Williamsport, Pa., and inspected the West Branch Sweepstakes corn grown by this association.

There are several varieties of corn grown and sold under the name Sweepstakes. Such information as is available indicates that the corn grown by this association and sold through its representatives is earlier in maturity and gives a higher percentage of dry matter than other corn sold under this name but derived from other sources.

It is suggested that growers desiring this corn should be careful to see that it comes from an approved source and from inspected fields. Orders are now being placed by dealers for the supply for the coming year, and it is desirable that they also acquaint themselves with the sorts recommended by the county agents and the College of Agriculture. —F. P. BUSSELL, Department of Plant Breeding, New York State College of Agriculture.

The Handwriting on the Hay Market Wall

(Continued from page 211)

will result in the poorer land being thrown into pasture and the tillable land being worked in a shorter rotation with more corn, more clover, more manure, a better balanced farm business, and a more permanent agriculture. If this business is once organized, it will not easily be abandoned for the old type of hay farming again.

Will the hay raisers see the handwriting on the wall, or will the change come by the old time-honored starvation method?

Showing Cattle—Dairymen can secure good reputation for their live stock by taking pains to place them in a show ring in the best of condition. Clip long hair, scrape and polish horns and hoofs with linseed oil, to which a little yellow ochre has been added, wash the skin and hair with soap and polish with the palm of the hand.

DIBBLE'S tested SEED OATS

Northern grown, from selected stock seed, thoroughly re-cleaned twice in our own seed-house and tested both for purity and germination, frequently produce maximum crops when ordinary seed is a failure.

In Dibble's Heavy-Weight Oats, we offer the heaviest and most productive American grown oat. The straw is tall, strong and stiff. The grain is thin-hulled with average weight of 42-44 lbs. per measured bushel, although we have had several crops of 47 lb. grain. Yields have been reported to us of 80-82-87-90-92 and up to 118 bushels per acre, right here in the Middle and New England States. Why not grow this kind of a crop on your farm?

Dibble's Twentieth Century, extra early, extremely productive, grain weighing 34-38 lbs. On our own farms growing from 100-150 acres annually, they have given us a yield during eight to ten years of over twice the average of the U. S. for the same period. Scores of our customers have written us that "Dibble's Seed Oats have doubled their crops." We make a special low price on 10 bushels or more delivered.

FREIGHT PREPAID TO YOUR STATION

Write at once for 10 sample packages of Dibble's Farm Seeds which include both kinds of Oats, Dibble's Farm Seed Catalog and Special Price List—Free.

Spraying by Telephone

Orleans County Works Together for Quality Fruit

ORLEANS COUNTY

By G. E. SMITH

situated in the famous fruit belt of Western New York, boasts of a spray service which saves its fruit growers thousands of dollars per year.

The work was begun in 1918 with 275 men in the service and that number has increased to about 1,000 members at present. The work is carried on through the local Farm Bureau which cooperates with the United States Weather Bureau, the New York State Experiment Station of Geneva, and the Departments of Entomology and Pathology at the College of Agriculture, at Cornell.

A fruit specialist is employed to keep close tab on bud and fruit development as well as development of insects and diseases throughout the county, and it requires his entire time in the field during the growing season.

To overcome the difficulties of differences in bud and fruit development and also any differences that might occur in various sections with insects and

If the time is ripe for an application and perhaps a storm period forecasted, a spray message is sent out immediately. In one case as above during 1922, a message was sent out on all relays early in the morning before the growers had begun their day's work and in less than two hours after the message had been sent the fruit specialist visited a criterion orchard about 18 miles from the office and saw 16 spray outfits in operation and three more being repaired. The six hundred or more men on the telephone relays are reached by 27 calls from the office and in several instances, 90 per cent of the men had received the message in less than two hours. During the five years that the service has been in operation in Orleans County, only a few instances have arisen where growers have failed to forward the messages promptly.

Field tests are carried out in various parts of the county to find out the value of the different applications against insects and diseases. These tests show

Right Spraying and the Right Time is Necessary for Right Fruit

diseases depending upon nearness to Lake Ontario, soil, drainage, topography, etc., criterion orchards are selected as time indicators for certain recommendations.

The Telephone Speeds Warnings

In order that so many growers might receive the recommendations in a remarkably short time, that is, if a spray is to be applied ahead of a storm period for the control of apple scab, the telephone is used as a medium of swiftness.

The names of the growers are placed on telephone relay lines and the following system is used: The fruit specialist calls one grower in each section where there is a different telephone exchange or criterion orchard. The latter in turn calls two or three others in the same locality, and each of these men to call two or three more, and so on. The men in most cases to call those on the same line so that it is not necessary for them to call central. Who is to call whom is prearranged before the first message is sent.

In forming the relay it is very important to place large dependable growers as pivot men. In sending out a recommendation to so large a number of growers, it is necessary to send to each grower a code chart, as the short messages are more apt to be forwarded correctly. The code chart contains the kind of fruit; the number of the spray, the spray to apply, materials and amount to use, and for what applied. For example, Code A, Code No. 1, might mean to apply the delayed dormant spray to apples. Very often it is necessary to give varieties of fruit as early or late blossoming varieties. If a storm period is due within the next two or three days this is also relayed along with the spray recommendation.

Cards For Follow Up

Each telephone message is followed by a "follow up" card to serve as a check for any mistake that might occur. In case growers have no telephone they are placed on the mail service. The telephone system has a big advantage in most cases, as the growers have a day to two days of spraying in advance over the mail service.

the great value of timely applications. During 1921 and 1922 field tests have shown that codling moth injuries have been reduced 30 per cent in orchards where a special codling moth spray had been applied, compared to orchards in which the spray was not applied. Individual growers have stated that they have been saved from \$50.00 up to \$600.00 on just one timely spray.

In 1920, in five orchards where the sprays were timely as compared to five orchards where sprays were applied "any old time" there was a difference of 26 per cent in perfect fruit. In this case it meant a loss of over 1,500 barrels of A grade fruit, which had to be thrown in lower grades or culls.

Results during the five years of the spray service have proven that no one particular spray can be recommended year after year in scab control. Numerous cases can be cited where timely applications have saved the growers hundreds of dollars. The spray service intends to give the best up-to-date information at the proper time. The growing of high quality fruit has come to stay and the requisites for better fruit are being raised each year. It is up to every fruit grower to keep out destructive insects and diseases. This would mean a better neighborly spirit. Fruit growing has reached a point where it means to spray or get out of the game. An unsprayed orchard is a menace to any community.

Fruit growing is a big game and means fight from the word go, but when growers can pull through a season as 1922 has been, with plenty of insects and disease to fight, and come through with 80 to 90 per cent A grade fruit, it shows the fight is not so great but what it can be won.

Fruit growing is somewhat like the game of baseball, it may be somewhat easy to reach first, second and even third base, but after all its the score made at the home plate that really counts. The spray service is ever ready to pitch out the ball of information and it always finds hundreds of growers playing their positions steadily and earnestly.

Am very much pleased with the new Agriculturist. Wish you continued success.—RALPH HODGES, Otsego Co., N. Y.

Horticultural Society Meets at Poughkeepsie

NEARLY half of the 3 days' program of the annual Eastern meeting of the New York State Horticultural Society, ending February 23, at Poughkeepsie, was devoted to marketing subjects. Although there was much interest in the discussion of insect pests, diseases, and other problems of growing, the outstanding feature of this year's meeting was the evidence of real progress toward better marketing of fruits in the Hudson River sections.

There are thirteen local cooperative marketing associations now operating in the Hudson River Valley, according to Mr. A. B. Buchholz, County Agricultural Agent of Columbia County, who gave an enthusiastic account of the organization of the new Hudson River Central Cooperative Association. It will have an estimated pack of approximately 100,000 barrels next season. In discussing the costs of packing in the various local packing houses, Mr. Buchholz said it had ranged from 25 cents to 75 cents per barrel. The Red Hook Association packed their apples for 45 cents per barrel, the Ulster Park Association packed theirs for 50 cents, and the Claverack Association for 43 cents. He considered 43 cents to be a reasonably low cost. This new central association, which will correspond to the Western New York Cooperative Packing Association, will concentrate its attention on grading and packing, and will endeavor to establish uniform grading in all its plants.

Need for Better Packing Emphasized

In all the discussion of marketing, this necessity for better packing of apples in the Hudson River Valley was emphasized. The growers who are grading their apples to approved marketing standards and packing them uniformly, without misrepresentation as to their contents, were said to be so few as to be conspicuous. It was generally agreed that before any campaign for advertising Hudson River Valley fruits can be undertaken, they must be better standardized.

There was considerable discussion of the possibilities of putting Hudson River apples on the New York market in smaller packages than the barrel. Herschel H. Jones, marketing expert of American Agriculturist, in a sound talk on "Marketing of Hudson River Apples in New York City," advised the use of new types of packages, smaller than the bushel, rather than the copying of the Western bushel box. Experiments made in marketing apples in cartons holding twelve to sixteen apples through chain stores this last season have demonstrated, according to Mr. Jones, that entirely new outlets may be opened up for Eastern apples by use of such packages. He maintained, however, that the barrel would continue for many years to be the popular container for Eastern apples, and that the trouble was not so much with the barrel as a package, at the present time, but the improper way most shippers pack.

Other Features of the Program

Other stimulating features of the program were an address on "Advertising as a Factor in the Development of Horticulture," by C. I. Lewis, managing editor of the American Fruit Growers' Magazine; a most interesting report on the activities of the Redhook Cooperative Packing Association, by Mr. K. B. Lewis of Redhook, and a very inspiring address on "Cooperative Marketing," by Aaron Sapiro.

The aim of cooperative marketing, pointed out by Mr. Sapiro, is to stop dumping and to substitute merchandising. The "six steps of merchandising" that are fundamental to the Sapiro plan of cooperation are: (1) Grading, (2) Putting up in attractive packages that meet consumer demands, (3) Getting people to consume the product regularly, (4) Extending markets by longer time of sale, larger territory or by greater use; (5) Directing the flow of the commodity to markets so that each market gets what it can consume, and (6) Making prices depend upon supply at point of consumption instead of supply at point of production. Mr. Sapiro gave many clear illustrations of how these principles had contributed to the success of the big cooperative associations of the West.

McCormick-Deering

Tillage Implements

The McCormick-Deering Disk Harrow is a simple and efficient implement, built and trussed like a steel bridge, to serve many years. You will like the details and conveniences—the dust-proof bearings and the bearing oil cups set above the frame, the built-in angle-steel weight boxes, the oscillating disk scrapers, the forecarriage, etc. Made in sizes for everybody—4 to 10 feet. All sizes can be equipped with the tandem attachment which is shown above. Double disk is popular—farmers know that it more than pays for itself.

The McCormick-Deering Leverless Disk Harrow is a genuine tractor disk, not a made-over horse harrow. It is built for heaviest duty. It is controlled entirely from the driver's seat, without levers, yet it is very simple. Merely backing the tractor automatically sets the angle of both front and rear gangs. When the tractor starts forward the gangs hold that angle until released by a pull on the rope. In 5 to 10-foot sizes to fit your power.

The Dunham Cultivator has no equal as a seed-bed finisher. It pulverizes the soil, fills out air spaces, and saves moisture content. Following the drill, it helps the little plants to get a quick start, firmly set in finely mulched soil. Use it to prevent winter-killing of wheat; to rejuvenate meadows, etc. It is far ahead of a roller for small grains. Made in eight sizes, for horse and tractor use.

SEED-bed making will call for fast and thorough work this year as always. The planting season will roll around in a twinkling, but no matter how few the days between plowing and planting you can have a profit-building soil by using efficient equipment.

McCormick-Deering Tillage Implements combine the three essentials—good work, long life and convenience. They are of practical design, their construction being based on ninety years of farm and factory experience. They are priced on the basis of economical quantity production, and as an investment they offer you attractive returns.

To Fill All Your Tillage Tool Needs See the McCormick-Deering Dealer. It Pays!

Do You Want A Permanent and Profitable JOB?

If you are tired of farming and yet like to deal with farmers we may be able to use your services. You require no capital but should have an auto or horse and buggy.

We have a staff of good salesmen who are selling subscriptions for American Agriculturist in the Middle Atlantic States and the New England States, but we wish to add 25 more reliable men between now and April 15th.

Previous selling experience is desirable but not absolutely necessary if you are an upstanding type of man who has a moderate amount of confidence in himself and who is an enthusiastic believer in the big value of American Agriculturist to every farmer in your State.

You owe it to yourself to at least investigate this opportunity and we will cheerfully give you full information without obligating you in the least if you will tell us a little about yourself and your previous experience. Mention whether you have ever sold subscriptions or anything else.

Address—H. L. Vonderlieth, Cir. Mgr.

New England Cooperation

Reviewing Results Gained by the Eastern States League

THE Eastern States Agricultural and Industrial League has just completed what might be considered the most successful year of its history.

By Pres. H. A. MOSES

Through death and other circumstances,

some of these men are not the same as the original twenty-nine, but it is significant to note that among the present underwriters are included several farmers. In the work which the Eastern States League is doing with boys and girls we have also some fine results to point out. During the past year the Junior Achievement Bureau of the Eastern States League has organized 380 achievement clubs with a membership of 4,667 boys and girls.

The Home Bureau of the Eastern States League has also had a very successful year. The activities of this bureau are divided into three phases. First, the organization and promotion of Home Information Centers; second, demonstrations and lectures arranged at the Eastern States Exposition and in connection with the Home Beautiful Expositions; third, classes, lecture courses, and demonstrations, arranged and conducted for women's organizations.

Started Over Ten Years Ago

I wish to mention here that this wonderful work which we are doing throughout the Eastern States had its inception over ten years ago when we of Hampden County organized what is now known as the Hampden County Improvement League. It was the business men of this county who realized the importance of close cooperation between the industrial and agricultural interests of a community. We realize the absolute interdependence between the city and the country. I remember going down to Washington and interviewing the Secretary of Agriculture, Mr. Houston, and explaining the whole idea to him. He was very much interested and said that a great deal could be done along these lines, but he also realized the difficulties which would confront us. I am sure that every one of our members are pleased at the strides which have been made along these lines during the past ten years, and it is particularly gratifying to us of Hampden County to think that anything we have done has proved sufficiently successful to extend it to include the ten Eastern States. You will all be interested to know that we are receiving requests from all over the United States to explain just how our organization was originally formed and how we conduct it. As a matter of fact, our organization has attracted attention beyond the confines of this county, and letters requesting information from us have been received from different parts of the world. I wish at this time to acknowledge again the wonderful support which this movement has received from Mr. Theodore N. Vail, who died in 1920. Mr. Vail was one of the men most actively interested in this movement and gave me a great deal of valuable assistance and help in getting this organization under way. Mr. Vail was in this movement from the very beginning, and it was his intention when he retired as active president of the Telephone Company to devote all of his time to the junior achievement work which we are now carrying on. He was an original subscriber to all of our activities and was the first vice president of the Eastern States League.

City and Country Interdependent

The sum and substance of this whole movement, as I perceive it, is the greater realization from day to day on the part of thinking men and women that it is necessary for city and country to get together to work out their common problem for mutual good. Our movement is aimed to strengthen both industry and agriculture politically, economically, and socially. Through the League's threefold approach—that is, the Farmers' Exchange, the boys' and girls' work, and the Home Department we aim to bring about a prosperous economic and industrial situation and a more stable social condition in New England and the East.

The real beginnings come in April:
"As ye sow, ye are like to reap."

Effects Big Saving

Second, through the organization of a pool the Farmers' Exchange was enabled to purchase the raw materials necessary for the mixing of these rations at a time of the year when the market in these commodities was at its low point and the volume being sufficiently large to receive the most favorable consideration from the sources of supply; this means a reduction in actual cost for the farmer.

Third, as a result of the active cooperation and assistance of the business men on the directorate of the Eastern States Farmers' Exchange and the Eastern States League, the financing of this pool was made possible and the purchaser was required, merely to give his note for ten dollars on each ton of feed purchased, the New England banks financing the operation over a six months' period of time and the obligations being reduced each month by the payment on the part of the farmer for the feeds as he receives them in equal quantities each month. But for this cooperation it would have been practically impossible for individual farmers or even small groups of farmers to have engineered the proposition.

The total value of the tonnage purchased exceeded a million and a quarter dollars and the financing of this operation, made possible through the efforts of members of the directorate of the Eastern States Agricultural and Industrial League, illustrates once more the necessity of and the benefits which can be derived from a "farmer-businessman" combination—a Country-City Get-together. Eight leading New England banks cooperated in financing the pool over a six months' period of time.

While I am on the subject of finances I want to give you a brief illustration of the confidence which the business men are placing in the future of the Eastern States Farmers' Exchange. The Eastern States Farmers' Exchange was organized five years ago without any capital stock. Its existence was made possible through what was known as the Eastern States Trust. This consisted of twenty-nine men who each signed notes aggregating \$43,000. These notes were deposited with a bank and furnished the basis of credit on which the Farmers' Exchange operated. This trust agreement expired day before yesterday. Forty men have renewed this trust for the next three years and have increased the amount to \$72,500.

Renewing Crank Case Oil

EVERY automobile driver knows that his engine operates better for a while after every time he has the crank case drained and new oil put in; but the chances are he does not have it done more than about one-fourth as often as he really should do it.

Even with the best of engines it is impossible to get such a close fit between the pistons and the cylinders that there will be no leakage of gasoline into the crank case. A gradual leakage does occur, and fuel is neither a satisfactory lubricant nor does it help the oil any at all. It simply thins it out and helps to destroy its lubricating properties. In cold weather the condition is much worse than in warm weather, because there is the tendency to use the carburetor choke, thus forcing an extra large supply of fuel into the cylinders which are already cold, and the excess fuel, instead of being burned, finds its way down into the crank case.

In summertime the crank case oil should be renewed every 1,000 miles. In winter this should be reduced to every 500 miles, depending upon the type of engine character of service and the kind of oil used. If the matter is not attended to, serious damage to the engine is likely to result. The proper time to drain the engine is when it is hot—that is, just after a run has been completed. All the oil should be removed. The practice of flushing with kerosene is questionable. It may remove some of the sediment, but operating the engine when kerosene is the lubricant is dangerous. It is better to spend a few cents on an extra quart or so of oil and use this to flush the engine, draining this oil out after it has been used. Old crank case oil which has been thoroughly filtered can be used satisfactorily also.

OIL NOT ALWAYS AT FAULT

It has come to be a sort of habit to blame the lubrication or the lubricating system for many of the troubles which afflict automobile and truck engines. One condition may develop which causes faulty lubrication, but which really results from something else. When the carburetor becomes very badly fouled with dirt, it is very difficult to adjust; the needle point may be badly worn; and the seats may be burred. At a glance it is practically impossible to adjust the carburetor when it is in such a condition, and the tendency then will be to use the choke too much, resulting in a mixture too rich for satisfactory combustion. The direct result of this will be the absorption of a large amount of fuel into the lubricating oil film, diluting it to such an extent that the crank case oil supply will also become diluted. On a certain truck run with a partly closed choke, the lubricating oil absorbed almost a gallon of gasoline in about half an hour.

The indicator on the engine may show there is plenty of oil and the operator may be led to believe that his engine is very economical in regard to lubricating oil; but the facts of the case are that the original oil has been used up, and has been replaced by gasoline working past the pistons.

Lack of Power the Result

This inadequate lubrication will result in a lack of power, and the operator will then open the throttle wider, the engine will become overheated, and the first thing we know we will have grooved pistons and rings and cylinders, and may even have burned out some bearings.

The remedy for this condition is never to use the choke except when starting the engine, and then never use it any more than necessary. If the crank case oil is drained out periodically, it will be further insurance of successful operation. In cold weather the crank case should be drained oftener than in warm weather, on account of the increased difficulty of combustion and the possibility of greater leakage past the pistons.

Care for the Harness—Frequent cleaning and oiling and timely repairing will save time and will add many years to the life of a set of harness. Rivets and wire are all right in an emergency in repairing a break, but they should be replaced promptly by more durable repairs, such as staples.

SOCONY MOTOR OIL

for TRACTOR LUBRICATION

Better Work—Less Cost

No days lost from plowing, harrowing, harvesting, or hauling—ample, dependable power and no breakdowns, whatever the job. That's real year-round service—the kind your tractor will give if it gets the right care.

Much depends on correct lubrication.

Socony Motor Oil stands the extra high operating heat tractor engines develop—whether you burn kerosene or gasoline. Maintains full compression. Protects bearings, cylinders and valve mechanism with an oil cushion that defeats friction. Keeps tractors full-powered and long-lived at least cost for overhauling and repairs.

The Socony Motor Oil chart will tell you the correct grade for your tractor. Ask your dealer to show you, or write us direct.

Socony Gear Oil Socony Cup Grease

For satisfactory engine service and economy of operation buy all your oils, greases and fuel under the *Socony Sign*.

Farm News From Albany

National Dairy Show Will Help Easterners

FOLLOWING Governor Smith's criticism of the Department of Farms and Markets, Senator Nathan Straus, chairman of the Committee on Agriculture, has introduced a bill in the Senate proposing reconstruction of the Department of Farms and Markets, as suggested by the governor. The bill, which was referred to the Committee on Agriculture, seeks to repeal the sections of the Farms and Markets Law relating to the Council of Farms and Markets. This council, consisting of five members, would be eliminated if the bill is enacted into law, and replaced by a single commissioner, to be appointed by the governor for a term of five years. The commissioner first appointed would go out of office December 1, 1927, under the measure. The salary is set at \$15,000 a year.

Senator Straus said, in argument for this bill: "The Council of Farms and Markets as present constituted is a unique department of government. It is completely removed from the supervision and control of either the governor or of the people. There is no way by which the Commissioner of Farms and Markets, entrusted with a tremendous power for good or evil over the food supply of the State, can be removed from his position. He is neither elected by the people nor appointed by an official of the government elected by the people. He is the appointee of a practically self-perpetuated and absolutely independent body, known as the Council of Farms and Markets."

A bill providing for the building of a Coliseum on the State Fair Grounds has been passed by the Legislature and signed by the governor.

Action on the bills to repeal the Mullin-Gage Law, which provides for the enforcement of prohibition, is pending in both Houses. The advocates of repeal as well as the friends of prohibition have been very busy waiting on the governor and various members of the Legislature. Both sides attended a joint hearing of the Senate and Assembly. At the present time these bills appear to be held up in committee in both Houses; both committees are "dry."

The Legislature recently passed a concurrent resolution asking Congress for modification of the Volstead Act, granting light wines and beers.

Legislation for the removal of snow from the State and county highways has been passed by the Assembly and is now pending in the Senate. This bill provides that the county shall pay one-half the expense and the State one-half when approved by the Board of Supervisors and the State Highway Commission.

Legislation advocated by the governor to consolidate many of the State departments and make the heads of these departments appointive instead of elective has passed the Senate.

Several bills have been introduced to change the election laws. Those attracting most attention provide for a direct primary to select State officers and judges. There are two of these bills. One of them is known as the "Hinman-Green Bill," which received consideration when Hughes was governor, and the other bill practically re-establishes the primary as it was pre-

vious to its repeal in 1921. Senator Swift of Erie has introduced a modification of the Hinman-Gage Bill, which would be a compromise between the direct primary and the present system.

An interesting resolution is in the Legislature to pledge the State's credit to the construction of a deep-sea ship canal from Buffalo to Albany. The object of the resolution is to offset any chance that Congress may approve a treaty with Canada for the construction of the proposed St. Lawrence Ship Canal.

A bill is before the Senate which provides for thirteen jurors in capital cases, so that in case of sickness or death the case can go on. One juror is to be eliminated by lot at the close of the case, leaving it to twelve to make a decision.

The Stapley Bill, increasing the speed limit that can be set by local ordinances from 15 to 20 miles an hour, was passed unanimously by the Assembly. Under provision of the bill, no local order could set a speed limit of less than 20 miles an hour. Advocates of the measure say that it will speed up traffic and eliminate speed traps without creating any danger. The measure now goes to the Senate.

The Lusk Repeal Bill, repealing the act which requires teachers to take the loyalty oath, has passed the Senate and is now before the Assembly.

An important bill is in the Legislature providing for the union of the New York State Experiment Station at Geneva and the New York State College of Agriculture. The bill would put the two institutions under one head, but the station would not lose its identity.

NATIONAL DAIRY SHOW AT SYRACUSE

W. E. SKINNER

I have just received a telegram from J. D. Barnum, of the Syracuse "Post-Standard," announcing that the New York Legislature has passed a bill providing for the construction of a Coliseum on the State Fair Grounds at Syracuse, in accordance with promises made by the committee that represented that city at the annual meeting when the 1923 National Dairy Show was invited to go to New York next October. The message also states that Governor Smith has signed the bill.

The rapidity with which the State solons passed this bill making an appropriation for the construction of the Coliseum to house the exposition comfortably is a very good example of how the people of New York feel with regard to the coming of the exposition.

Every State agricultural organization was represented and a great many individual farmers attended the hearings on the bill at Albany, so that no misunderstandings could occur in the minds of the lawmakers as to the necessity of holding the National Dairy Exposition in the East this year. This of itself has already had a tremendous influence upon the agricultural programs for the year in the Eastern States, so that the work our show can do for dairying this year will be just as great as we of the industry care to make it.

If the enthusiasm of the East is met with like enthusiasm from the dairy industry in all parts of the country,

\$7.50 After 30 Days Free Trial

The Belgian Melotte Separator—It's the wonderful Self-Balancing Bowl, No other like it.

80 days' free trial—then, if satisfied, only \$7.50 and a few easy payments—AND—the wonderful Belgian Melotte Separator is YOURS.

No Money Down!

Catalog tells all—write, **Caution! U. S. Bulletin 201** shows that vibration of the bowl causes cream waste! The Melotte bowl is self-balancing. Positively cannot get out of balance therefore cannot vibrate. Can't remix cream with milk. The Melotte has won 884 Grand and International Prizes.

Catalog FREE

Write for new Melotte catalog containing full description of this wonderful cream separator and the story of M. Jules Melotte, its inventor. Don't buy any separator until you have found out all you can about the Melotte and details of our 15-year guarantee which is infinitely stronger than any separator guarantee. Write TODAY.

The Melotte Separator, H. B. Babson, U.S. Mgr. Dept. 30-63, 2843 W. 19th Street, Chicago, Ill.

Runs so easily, bowl spins 25 minutes after you stop cranking unless you apply brake. No other separator needs a brake. Bowl chamber is porcelain lined.

When writing to advertisers please mention American Agriculturist.

this year will indeed witness "the world's greatest dairy show." With complete and adequate facilities provided for the holding of the exposition, and with plenty of hotel accommodations insuring comfort for everyone, all dairymen can now set their eyes on the East for a great year's work and a revival of our oldest dairy section that will be felt in the world's progress.

NORTHERN NEW YORK NOTES

CHARLES L. STILES

The extremely cold weather of the past few days has permitted of quite active operation in the way of putting up the season's ice supply and large numbers of men and teams have been engaged in the work. The Lowville Cold Storage Company, one of the largest cheese-storage plants in the county, has finished filling their large ice house. Farmers are very busy getting up their individual supply.

Large quantities of wood and hardwood logs are being hauled into town, and with the price of coal at such a high figure and rather scarce at that, it met with a ready sale at \$4 to \$4.50 per cord: the logs mostly are being hauled to the Haberer furniture plant to be used by them for manufacturing purposes.

Not much real estate changing hands here this winter, due no doubt to the fact that prices for farm products are so low in price, with the outlook for the future coming none too promising, that not many deals are being made.

The State Nursery that is located near this village is in receipt of large orders for seedlings to be shipped to all parts of the State for reforestation purposes. It is with one exception the largest tree nursery located in New York State.

Farm help is now being engaged for the coming season, which is usually about March 1 in this locality. Farm help seems to be rather scarce and hard to engage at any figure. Quantities of baled hay are being delivered here at prices ranging from \$13 to \$15 per ton, with loose hay bringing an average price of \$12 per ton.

Not as many farm meetings are being held here in Lewis County as in former years, though some are scheduled for the week centering on the middle of February. On the whole, the situation seems rather quiet, with farmers in an optimistic frame of mind.

NEW YORK COUNTY NOTES

Essex Co.—We have had a tremendous amount of snow and a lot of zero weather for practically two months. We have had a hard time to keep some of the country roads open. The shortage of coal has created a great demand for wood. It is reported that there have been shipments of wood from this county to Philadelphia. Ice houses are being rapidly filled. The quality of the ice is very good in spite of the great depth of snow. Potatoes are bringing from \$1 to \$1.50 per bushel, veal 15 cents, eggs 50 cents a dozen. Cattle are wintering well.—M. E. B.

Clinton Co.—Ice cutting is on. Farmers are busy filling milk-station ice houses first, then their own. Having lovely winter weather, nice sleighing, not much lumbering as yet. Butter, potatoes, and eggs all seem to hold the 60-cent mark. Hay, \$13 per ton. A constant reader of your valuable paper.—T. E. D.

St. Lawrence Co.—The weather has been clear, but cold. Farmers have about finished harvesting their ice, which is of good quality. Few farmers are withdrawing from the pool.—H. S. H.

Broome Co.—Because of the scarcity of help, Edward F. Vincent has sold most of his dairy of choice full-blood and grade Guernseys at private sale.

Deposit Branch of the Dairymen's League Cooperative Association has voted to hold monthly meetings. E. W. Rosencrants and S. C. Sliter have been reelected directors.

One of the few remaining pieces of pine timber in Windsor has been bought of Benjamin King by George Manwarren, who has a gang of men at work now and will at once set up a mill on the King farm to saw the trees into lumber.—E. L. V.

Dairymen Standing Firm

Farm News From New Jersey and Pennsylvania

ALTHOUGH final figures were not available by the fourth week in February, it appears that the members of the Dairymen's League Cooperative Association in northern Jersey and eastern Pennsylvania have for the most part held firm to the cooperative pooling plan of their association. At the close of the third week in February about eighty dairy withdrawals were reported from Sussex, Warren, and Hunterdon Counties in New Jersey and the two adjacent counties across the Delaware River in Pennsylvania.

The canning crops men of southern and central New Jersey are still undecided on their method for selling this season's crops. The tomato men, particularly, are undecided whether to sell on the open market or to sign contracts. It is reported that some canners have offered a flat contract price of \$15 per ton for tomatoes.

Marketing Officials Meet

Representatives from New York, Pennsylvania, West Virginia, Maryland, and Virginia gathered with the staff of the New Jersey State Bureau of Markets for the Middle Atlantic Sectional Conference of the National Association of State Marketing Officials at Trenton, N. J., February 27 and 28. An interesting program was followed by the conference, in which the various States reported their marketing problems on fruit, vegetables, live stock, and farm products.

Considerable interest centered on the discussion of market reporting. Representatives of New Jersey's Women's Clubs expressed their appreciation of retail prices reported by the New Jersey State Bureau of Markets and their satisfaction with the method of reporting which has been built up over a four-year period. On the other hand, Pennsylvania reported unsatisfactory results with its retail-price reporting plan, upon which the Pennsylvania State Bureau has been working for three years. It was agreed that retail price reports served as an inspiration and educational help for consumers and women's organizations, and as such were highly desirable despite the technical errors incident to the service.

Jersey Legislature Has Full Calendar

By the last week in February the New Jersey Legislature had not finally acted upon any of the variety of farm measures before it, such as the bill for a new cooperative law, which has passed both the Senate and Assembly and is back in those bodies for further amendment. The date for adjournment of the Legislature was previously set for March 15. With a crowded calendar, however, and too much important business to be completed during the first two weeks of March, it is expected that the adjournment date will be postponed.

Several bills of considerable importance to farmers are now pending in the Senate other than those previously reported in these columns during the last six weeks. One of the measures is an amendment to the Insurance Law, which would permit insurance companies, to be organized by farmers, so that the company could combine different kinds of insurance, such as liability, labor, and accident insurance. At this date the chances are considered to be good for its passage. Another bill would make it a misdemeanor to influence a member of a cooperative association to break his marketing contract or agreement. It would also make it a misdemeanor for him to give false statements on the finances or business of cooperative associations.

Considerable interest has centered in another bill pending in the Senate which would give back to the various counties, State money which was received from the school tax, the railroad tax, and the school fund. This would be on the basis of the teachers employed and the days' attendance of all the pupils in the school. At the present time the distribution of school money is on the basis of ratables. Another act would require the financial officers of New Jersey townships to publish, as prescribed by law, a true statement of the financial condition of

the township committee. The Teachers' Tenure of Office repeal, previously reported, has been superseded by an amendment which would give five years instead of three years as the period of teaching before the Tenure of Office provision becomes effective.—W. H. BULLOCK.

CENTRAL PENNSYLVANIA NOTES

J. N. GLOVER

The directors of the Union County Fair Association, with the directors of the Milton Fair, have formed a circuit beginning with the Altoona Fair on August 14, the Lewistown Fair on August 21, Milton on August 28, and Union County on September 4, making four continuous weeks in this section of the State.

Several carloads of Michigan certified seed potatoes will be sold to growers in Union County through some club or organization. A Poland China Hog Club has been organized at Mifflinburg, and clubs of other breeds are likely to be organized this year. It is a mistake to have clubs of many breeds in a small county when one or two breeds only should be boosted, for in "union there is strength." This same mistake has been made in this State of trying to keep too many breeds of cows for milk, instead of agreeing on one or two good breeds, like Holstein, Brown Swiss, Guernsey, or Ayrshire, and breeding only these for milk.

Wheat has been covered with snow for a few weeks, which is a great protection to it, since it made a very scanty growth for winter on account of dry weather. Recent rains and melting snows have helped the water situation.

More carloads of coal are being shipped in to relieve the fuel condition, which is getting serious.

Farm work is at a standstill, except a few men who are hauling home wood for fuel or are hauling manure to cornfields.

With advance in the prices for corn and wheat, farmers are feeling that their efforts last year in growing grain will bring something of a labor income. Tobacco growing in Snyder County will likely increase next year, as they find they can grow a heavy crop of tobacco along the river, making them more and more money than other crops.

Public sales have begun already, and stock is bringing good prices, except horses, which will sell better later when needed.

Wheat is moving at \$1.35 now and corn at 70 cents in ear, and there is a fair demand for both grains at these prices, though some farmers are holding for \$1.50 for wheat and 75 cents for corn, as both grains cost the latter prices to grow them.

There are more farms for rent in Buffalo Valley this time of the year than ever has been known to exist at any time in its history.

A new way of feeding is surprising the world's largest poultry raisers

Remarkable results are being observed in feeding yeast to poultry

Greater egg fertility and hatchability—increased vitality and virility in laying stock—less mortality among chicks.

THESE are the surprising results obtained by some of the world's largest hatcheries—and by other raisers in many parts of the country—in feeding Fleischmann's Pure Dry Yeast to poultry.

For several years the world has known of the wonderful value of Fleischmann's Yeast for man. And now, after many experiments, the Fleischmann Company has developed a dry yeast for stock and poultry.

Here, briefly, are some of the results:

A test in one of the world's largest hatcheries showed an increase of 23% in fertility. Only 5% of eggs from yeast-fed hens were infertile, as against 28% of eggs from non-yeast-fed hens.

The chicks in this lot received Fleischmann's Pure Dry Yeast and were marketed in seven weeks, averaging 13/4 pounds each.

The loss in one of the recent tests was 93 in a hatch of non-yeast-fed chickens, and only 59 for the chicks fed on Fleischmann's Pure Dry Yeast—a saving of 34 chicks.

In one flock fed on Fleischmann's Pure Dry Yeast, whose age at present ranges from 2 to 9 weeks, the loss has been only 345 out of 6000—less than 6%. “And for general development,” writes the manager, “they surpass anything I have ever raised.”

Further tests are being conducted. We shall publish full details from time to time. But we want you to try Fleischmann's Pure Dry Yeast yourself *now*—to prove for yourself its unique value in your poultry yard.

We are prepared to make immediate deliveries of Fleischmann's Pure Dry Yeast in 2 1/2 pound cans, direct to you. One can should demonstrate its power in securing more fertile eggs, with fewer chicks dying in the shell—stronger, more vigorous chicks—and faster-growing, huskier birds. With each can we will send a booklet containing complete instructions for the care and feeding of chicks and laying hens.

Pin a \$2 bill or money order to the coupon below and mail it today! It will bring you a big 2 1/2 pound can of Fleischmann's Pure Dry Yeast—enough to feed 10 birds for nearly 4 months. We pay the postage.

Costs 2c a tablespoonful

One tablespoonful daily to every 10 hens or 50 baby chicks. Each can contains 117 tablespoonfuls or 4 months' supply for 10 hens.

Forces rapid growth—1 lb. per month. Two-pound broilers in 8 weeks.

THE FLEISCHMANN COMPANY
Dept. D-12
701 Washington Street, New York City.

Enclosed find two dollars (\$2.00). Please send me a 2 1/2 pound can of Fleischmann's Pure Dry Yeast by prepaid parcel post.

CRAINE TRIPLE WALL SILOS

Rebuild The Old Stave Silo

ANY iron hooped, stave silo, if twisted, tipped or collapsed can be rebuilt into a beautiful new Craine 3-wall Silo at about half the cost of a new.

A Craine Silo gives 3-wall protection against wind and weather. The strong stave wall surrounded by Crainelox Spiral Covering with thick wall of Silafelt between, insures perfect silage and giant strength at every square inch of silo.

Craine Silos are different from any silo you see. Their smooth exterior is unmarred by hoops or lugs. They are as strong as they are beautiful. When you choose the Craine you decide on permanent satisfaction—the lowest yearly cost for silage making and keeping.

Is The Herd Plan Sound?

Questions About The Herd Plan in New York

IT is my purpose in this article to ask some questions relative to the soundness of the so-called accredited herd plan and the methods under which it is being put into effect in New York State. Lest I be misunderstood and thought to have some personal grievance, I want to state in the beginning that I have had tuberculin tested cattle for several years and during the last two years have had herds under the accredited herd plan. I have always been accorded every courtesy by the state and federal officials in charge of accredited herd work. I have reciprocated in a small degree by working to get legislative appropriations to carry on the work. I am convinced that practically everyone connected either at Washington or Albany with the supervision of accredited herd work is sincerely trying to do his best. The questions which I raise, therefore, have no personal animus or desires as a basis. They are simply raised that we may think more carefully about a proposition which is fundamental to the agricultural welfare.

The accredited herd plan was originally intended to provide for three-cornered cooperation between the officials of the Bureau of Animal Industry, the livestock sanitary officials of the various states, and livestock owners.

It was based on an agreement between the federal representatives and the state representatives, who in turn entered into a written contract with the cattle owner, whereby he agreed "to submit his entire herd to a tuberculin test; to slaughter, under inspection, any animals showing clinical or physical evidence of tuberculosis; to remove all reacting animals from the herd; to use reacting bulls under precaution; to heat milk and milk products from reacting cows to 150 degrees Fahrenheit for at least twenty minutes before using for any purpose whatever; to remove all calves from reacting cows at birth and maintain such calves on premises free from infection of tuberculosis and feed them only on milk from cows which have passed a satisfactory tuberculin test, or upon pasteurized milk (from reactors); to allow no cattle to associate with the herd, which have not passed two tuberculin tests approved by the federal or state officials; and to thoroughly disinfect, premises where tuberculous cattle have been harbored."

The Accredited Herd Certificate

If after operating under such a plan, a cattle owner's herd passes two clean annual, or three semi-annual tuberculin tests, he is issued a so-called accredited herd certificate. With such a certificate he is permitted to ship his cattle inter-state, without further tuberculin test, for a period of one year, such permission, however, being subject to the regulations of the state of destination.

Because breeders of purebred cattle usually depend on sales out of the state for a good part of their revenue, it can be seen that an accredited herd certificate constitutes a real asset to the owner of a purebred herd.

The New York State Farms and Markets Law provides for the payment of indemnities for reacting animals by the state in amounts not to exceed \$112.50 per head for registered purebred animals and \$67.50 per head for grade animals. The United States Government, when appropriations are available, pays one-third of the difference between the appraised value and the salvage or proceeds from the salable parts, (usually hide and carcass), in amounts not to exceed \$50 per head for registered purebred animals and \$25 per head for grade animals. In no case may the owner receive more than the appraised value of an animal.

	Appraisal Value	State Salvage	Federal Indemnity
Grade Dairy Cow.....	\$90.00	\$20.00	\$67.50
Grade Dairy Cow.....	50.00	20.00	30.00
Beef Animal.....	30.00	30.00
Purebred reg. dairy cow..	200.00	25.00	112.50
Purebred reg. dairy cow..	150.00	20.00	112.50
Purebred reg. dairy cow..	100.00	20.00	80.00

According to the records of the Department of Farms and Markets, the

first test under the accredited herd plan in the State of New York was made May 27-28, 1918. The work was carried on until 1919 without the owners receiving federal indemnity for reacting cattle. In the Spring of 1919, the legislature amended the New York State law and a working agreement was signed allowing breeders to receive federal indemnity for reacting animals. In December, 1919, a further amendment was made permitting owners of grade animals to enjoy the benefits of the plan.

The first accredited herd certificate was issued May 15, 1919, at which time 123 herds were under supervision.

Work Makes Rapid Progress

From its inauguration until the present time the work of applying the accredited herd plan has made rapid progress in New York State. In a report recently issued by the Department of Farms and Markets at Albany, the following figures appear, covering a period from July 1, 1918, to December 1, 1922.

	Once Tested Herd	Clean Cattle	Accredited Herd	Cattle
July 1, 1918.....	1	93
January 1, 1919..	15	287
July 1, 1919.....	64	527	1	19
January 1, 1920..	113	1,257	16	157
July 1, 1920.....	223	2,704	45	501
January 1, 1921..	270	8,205	67	1,620
July 1, 1921.....	2,128	30,920	123	3,787
January 1, 1922..	2,692	37,357	289	6,246
July 1, 1922.....	4,909	58,017	685	14,278
December 1, 1922	8,989	103,644	1,030	19,077

From Individual to Area Plan

When the accredited herd plan was first made available, as might be expected it was taken advantage of by individuals scattered throughout the whole state. For the most part these constituted progressive purebred breeders, some of whom had been battling the disease for years and other of whom were interested because of the possibility of securing an accredited herd certificate with a minimum of risk. Others early saw the opportunity to dispose of herds which they knew to be tubercular to the state for the indemnity money.

Of late, under the leadership of the Federal Bureau of Animal Industry officials, there has been introduced the so-called area plan of cooperation under which the applications of scattered individuals are ignored in favor of concentrated work with cattle owners on the basis of a township or a county.

At the present time, owing to the activities of federal officials and to the support of those whom they have enlisted within the state, the trend is toward a greater and greater employment of so-called area drives, in an attempt to wipe out tuberculosis within a given section.

While I have not attempted to go into detail, I believe what I have written sums up the essentials of the situation relative to the application of the accredited herd plan as it stands today, and in connection with the same I would like to ask a few pertinent questions for readers of the American Agriculturist to think about.

The Matter of Indemnities

The state already owes to owners of cattle which have reacted and been slaughtered under the test, close to two million dollars. Should this back indemnity which now stands against the state at 6 per cent be appropriated by the present legislature and enough additional funds appropriated to pay for indemnities as they are incurred in the state?

It would appear to be bad business from the point of view of the owners and the state to have the payment of indemnities behind, anywhere from one, to two years. The owner does not have the use of his money and under the law, after the claim is established, the state has to pay the owner 6 per cent on the amount thereof. This would seem to be expensive money for the state to borrow.

Is the Area Plan Sound?

As stated above, due in my opinion largely to the leadership of the U. S. Bureau of Animal Industry authorities, the present tendency is to use more and more the so-called area of testing, under which an attempt is made to test all of the cattle in a given area with

UNADILLA SILOS

Trustworthy

You can trust your green corn to a Unadilla Silo. It'll keep fresh and succulent because the Unadilla is air and water-tight and frost repellent.

You can trust your boy or girl up and down its wide, safe, handy and ever-ready door-front ladder. You can trust your man to tighten its hoops—it's easy. One place to do it—from the door-front ladder.

the object of rendering this area free from tuberculosis. Is this the soundest plan under which to proceed?

Obviously under it the accredited herd plan cannot be made available to all the cattle owners of the state. Are there not discriminating and careful cattle owners who possess both the desire and ability to eradicate tuberculosis from their herds and keep them clean who, under the area system, do not get the cooperation that is their right? And are there not a good many men in some of the areas cleaned up who will never keep a clean herd unless they do so by accident? Does the creation of clean areas, provided they can be kept clean, counterbalance the maximum cooperation that might be extended to cattle owners who possess every qualification to give the state and federal governments the most desirable kind of cooperation in combating the disease.

Where are We to Look for Replacements?

The figures show that an immense number of cattle are being slaughtered. They show that in some areas a good third of the cattle react. Where these areas lie in dairy districts which derive their whole income from milk and its products, the owners obviously cannot get along without replacing their losses. Where are clean replacements to come from?

Is there not danger, particularly in some areas, of removing the tuberculous cattle before others are available to take their place?

Are Sanitary Measures Sufficiently Emphasized?

Most of the reports we read, speak of the great value of testing and the rapidity with which it has developed. Has the education of the cattle owner relative to the nature of bovine tuberculosis and its control preceded or even kept pace with the testing that has been done?

When reactors are found on farms, are the premises in all cases thoroughly cleaned up and disinfected? Are sufficient precautions being taken to prevent the re-introduction of tuberculosis animals into tested herds? Or is the work demanding so much of the men who are handling it that these real fundamentals are in danger of being slighted in favor of the more spectacular testing and slaughtering of reactors?

Is Testing on an Economic Basis

In a previous article I have stated that I believe men test when it pays. The more I observe the tuberculin testing of cattle, the more I am convinced of the truth of this statement. I know men who have tested and thereby developed clean herds of purebreds who are reaping a financial reward today. I know men who have tested grade herds and are selling their milk for more money. I also know men who have tested their herds and sold them to the state by the indemnity route. With them it paid also.

If a proposition pays, a man ought to be willing to pay for it. Certainly he will not appreciate a free tuberculin test as much as one he pays for. The tendency, however, is more and more toward free testing. Is this a sound economic proposition? Until bovine tuberculosis eradication is put on a health basis, is it not fair to inquire what justification there is for free testing? Will it not in the long run retard sound progress?

The Neck of the Bottle

Last year almost two and a half billion dollars' worth of milk was produced in the United States by approximately 23,000,000 dairy cows. To milk these cows by hand requires the time of 2,300,000 people two hours a day, or 4,600,000 hours of human labor each day (based on the supposition that a man can milk ten cows an hour, which is fast hand milking). At the extremely low rate of 10 cents an hour it costs the farmers of the United States \$460,000 a day—just for milking.

Just think of a two billion dollar industry, the largest and most profitable branch of agriculture, operating on such a slow and costly basis. No other industry or branch of farming at all comparable is so handicapped. Hand milking is the limiting factor in dairy farming; it is "the neck of the bottle"—because when milking can be done faster there is more time for other farm work.

Of course cows are not milked for the love of it; on the contrary, dairymen have wanted and waited for a better way of milking for

many years. "The Better Way of Milking" has arrived, and it is the De Laval Milker. There are now over 10,000 De Laval Milkers in use in all parts of the country, giving unqualified satisfaction and proving every day that they can milk at least twice as many cows with the same amount of help—thus cutting the cost of milking squarely in two, or enabling twice as many cows to be milked with the same help.

But even if the De Laval Milker didn't save a minute of time, its use would still pay because its uniform, gentle and stimulating action causes the cows to produce more milk than can be obtained by any other method of milking; and it produces cleaner milk.

The De Laval has proved conclusively that it cuts the cost of milking, produces more milk from the same cows, and produces cleaner milk. It pays for itself in a year's time and is sold on such easy terms that you can use it while it is doing so. Why wait any longer? See your De Laval agent or write us for complete information.

Herdsman Tells of Wide Experience with Kow-Kare

Paul A. Chadwick of Corona, Cal., writes us a typical letter on the results of his use of Kow-Kare in the dairy. He says:

"I am a herdsman for the Jameson Estate, and I am having difficulty to convince the manager of the value of KOW-KARE. We are troubled with abortion, retained afterbirth, and barrenness, all of which I can prevent with KOW-KARE and I have had 100% results with barrenness, never in sixteen years with several thousand cows in several states failed to get cows with calf after three months' continuous use. I have used about a ton of your product and some Garget Remedy as well as Bag Balm. My father used KOW-KARE when I was very young and never had a case of abortion, and only one case of retained afterbirth in over twenty years."

That KOW-KARE can and does accomplish such wonderful results is not strange. The medicinal properties of the remedy build up and put into healthy operation the digestive and genital organs. It is in these organs that most diseases of cows are centered—and it is these same organs that regulate the flow of milk.

During the months of winter feeding the milk-making functions need outside support.

BOOK
FREE

KOW-KARE furnishes this help. Just a tablespoonful in the feed twice a day for one week in each month will show a big increase in the yield of milk. The use of KOW-KARE before and after calving assures more robust cows and healthier calves.

We have a thirty-two page book that tells just what to do in case of cow illness. It is called "The Home Cow Doctor" and is yours for the asking. Thousands of cow owners ask for it each year.

Feed dealers, general stores and druggists have KOW-KARE—\$1.25 and 65c sizes. We will send postpaid if not to be had at your store.

WOLVERINE

The 1,000 Mile Shoe
Double-Tanned—Double Wear

"I am a farmer. Weigh 215 lbs. and shoes were hard to get that would last me 3 to 6 months. I offered merchants \$25 a year to keep me in shoes. They refused. I bought a pair of Wolverines Oct. 8, 1921, and they are still on my tootsies after 312 days of continuous service. I will always be a booster for the Wolverine 1000 Mile Shoe. (Signed)
WILLIAM HALDIMAN
California, Mo.

The Plowboy

For plowing here's the shoe. High enough to keep out dirt, low enough for coolness. It fits snug and protects and supports the ankles going over rough, broken ground. And it wears like iron.

Ask for Stock Nos.
311 - 306

It Wears 1000 Miles and it stays soft—rain or shine

We are exclusive makers of work shoes made of horsehide double-tanned by our own secret process.

This is our specialty. Our every energy is bent on making the world's strongest work shoes. To insure the best wearing leather we do our own tanning, in our own specialized tanneries. We tan horsehide, and it is known as the toughest fibre leather on earth, yet we make it soft and pliable as buckskin. Horsehide is used to cover league baseballs because it is the only leather tough enough to stand the pounding.

And it stays soft when double tanned our way. When other leathers get wet they dry out hard. Wolverine double-tanned horsehide stays soft. Wet it, soak it in water, snow, slush, mud, and it dries out soft and flexible as velvet. Wear Wolverine shoes and you'll say you have gained an entirely new conception of shoe service, endurance and comfort.

We are the largest tanners of

horsehides for work shoes in the country. We buy only the choicest hides. In making Wolverine shoes, we use only the strongest part of each hide—the butts, where the fibre is toughest and most enduring.

You'll say that Wolverine Shoes are the most economical shoes you ever owned, and you'll rejoice in the comfort they give you. Notice how thick the leather is, and then feel how soft it is. Just like velvet. Yet Wolverines wear like iron. And they never tire your feet.

We make a Wolverine work shoe for every purpose. All are horsehide through and through. For field and factory, for lumber and mining camp or oil fields, for hunting and motoring, where a husky, hard-wearing, comfort-giving shoe is needed, there is a special Wolverine shoe.

If your dealer hasn't the Wolverine we'll see that you are supplied them by our nearest dealer. Write to us for catalog.

Wolverine Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.
For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. You'll find it a blessing to the feet.

Wolverine Shoe & Tanning Corp.

Give The Hen a Rest

Dormant Period as Necessary to Poultry as to Cows

THE old saying that "there is nothing new under the sun" does not seem to apply in these days of heavier than air flying machines, wireless telegraphy, and artificial lights in the hen house. It may be true in the case of matter but does not seem to apply in the case of ideas.

By O. W. MAPES

necessary prelude to milk production.

The use of lights in the hen house has sprung a new set of problems on poultry keepers that cry out for solution.

Will it pay to use lights during late summer and fall? How long a rest for moulting should be given before resuming lights? How to get back from lights to natural daylight without disaster and how to avoid a winter or spring moult accompanied by a slump in egg production are but samples.

I had several flocks on which I used lights during August and September, and some had no lights until November. When resuming lights at different times, results were far from satisfactory.

In two flocks only about 15 per cent to 20 per cent of the hens laid. These have kept it up now for two months or more but few new recruits at this writing. In another flock about half of the flock started to lay and have continued to do so, but the remainder are still dormant at this writing, February 7th. Another flock of 202 hens, two and three years old, were given lights January

Makes "the Hen Man," say "crowd them for nine months and then rest them for three"

bodily functions and produce the eggs, in such amounts as can be used without clogging up the system with too much of one or more elements.

To my mind the question of determining these food requirements for the laying hen is of vastly more importance than the question of heredity.

It seems to me that some of the effort now being devoted to trap-nesting individuals in our egg laying contests, etc., might better be diverted to finding out more about how to feed and care for a flock so that once a pullet or hen starts to lay she will be able to keep it up with the regularity of the menstrual period in mammals.

I have had opportunity during recent months to observe the performance of different flocks along these lines that have proved quite interesting. The answers have especial value because they have all been flocks of about 200 birds each, instead of the usual small experimental flock of five to twenty.

I can well remember how sixty years ago on my father's farm, as well as on his neighbors' farms, it was customary to winter a lot of yearling and two year old heifers on straw, dry corn stalks and dry hay. The result was that when spring came the heifers were far from thrifty as most of us now think of a thrifty heifer.

Those heifers almost invariably bred for the first time in June or July and freshened the next March or April. If one or more did not come in heat at that time as a yearling, so as to freshen as a two year old she usually waited another year before menstruation set in and did not freshen for the first time until three years old.

What has this to do you will ask with egg production.

Those straw-fed heifers were low in vitality as spring approached but when turned out on flush pasture for a month or two, there was a quickening of all their bodily powers, including sexual powers, and by June or July their menstrual periods started into action as a

9th, but laid no eggs until January 18th, when they started with two eggs a day and rapidly increased until on February 4th, they laid 105 eggs, a yield of over 50 per cent.

A companion flock of 202 hens of same age were laying 5 or 6 eggs a day on January 9th, when lights were installed, and on February 4th, they laid 110 eggs. These latter two flocks you notice practically all began to lay within about three weeks after lights were installed, while only a portion of the other flocks responded. What was the reason?

Another thing of interest in connection with these latter two flocks is that we had an expert from our Poultry Project organization come and help us pick out the poor birds or culls from this lot, in order to use the good ones as breeders.

When he got through we had the two flocks of 202 hens each and a pen of culls numbering 166. It is of interest to note that this pen of poor birds or culls is now laying a daily yield of 45 per cent, almost as much as the others. All have had the same care and feed.

Looking back to see how their treatment differed from the first three pens mentioned I find this difference.

The first three pens mentioned, I find, had the regular laying mash all through the time when they were recuperating from the moult, while the latter three pens had a ration from which all meat scrap, milk powder and alfalfa meal had been eliminated. There was practically no change in feed when lights were installed in the first three pens, but the meat scrap, milk powder and alfalfa meal was added to the dry mash for the latter three pens at the same time lights were installed, making a change as pronounced as the change from dry straw, hay and corn stalks to June pasture, in the case of the heifers mentioned, with the same results.

It is comparatively easy to secure an egg yield of 50 per cent in January from pullets, but when 500 to 600 old

TOBACCO GROWERS' UNION, Murray, Ky.

hens increase from zero to 50 per cent in a period of 17 days, "There is a reason" as the Postum advertisement says.

My grandson William, whose mother lives just over the line fence from my barn, has a flock of nearly 300 pullets, all in one flock, in an old cow barn, with nothing but kerosene lanterns for lights. They laid 4,425 eggs in the 31 days of January, an average daily yield of just about 50 per cent. The reports from the egg laying contest at Storrs, Conn., show that their 1,000 selected pullets are struggling along between 34 per cent and 37 per cent. I mention this because William's pullets received the same treatment that my last three pens had. He cut out meat and milk from their mash during the months of September and October in order to hold them back from laying a lot of small eggs, and in November when lights were supplied, re-introduced the meat and milk as well as some alfalfa meal made from exceptionally fine early cut alfalfa hay.

TREATING LIVER TROUBLES OF POULTRY

The combs and wattles of our hens and roosters turn black. They eat very well, but they seem to droop. Several have died. We feed them corn, wheat and oats. Would you kindly tell us what is wrong with them and how to treat them?—A. B., Chautauqua County, N. Y.

Undoubtedly your birds are affected by some liver disease. This is a very common complaint of poultrymen. These same symptoms are characteristic of blackhead, congestion of the lungs and pneumonia. However, it is questionable if the disease is any other than that previously mentioned.

The blackening of the combs is due to the excessive amount of blood that is forced into the head resulting from congestion of the liver. A post-mortem examination will show that the liver is either very dark and enlarged, containing a large amount of blood, being easily crushed due to the abnormal condition of the tissues; or in other cases, it may be shown by the more or less complete disintegration and degeneration of the liver and accumulation of fatty deposits in its place. Very often the gall bladder will be observed to have become greatly enlarged.

Liver trouble is due to several factors, such as lack of exercise; poorly balanced ration, carrying too much of the carbohydrate elements; or the accessibility of the birds to semi-decayed or mouldy food, which causes an unbalanced digestive condition.

A Good Remedy for the Flock

When the condition of the birds indicates, through the discoloration of the head, that the liver is out of condition, it has been found most advisable by investigators and experienced poultrymen to administer to the entire flock a dose of epsom salt, using about one pound to every hundred birds. A perfectly balanced mash is placed before the birds, to which there has been added about 5 per cent of charcoal. Green food plays a very important part in counteracting liver disorders. Green food may consist of cattle beets, sprouted oats or cabbage. A very important phase in the treatment of liver troubles is not with the birds. It consists in locating and eliminating the cause of the condition and its immediate correction.

In your specific case, it would be well to place before the birds, so that it is always accessible to them, a good, reliable poultry wash that is well balanced. Although wheat and corn are good foods, nevertheless they are not balanced. It would be a good idea to scatter cracked and scratched grains in the litter in the morning to give the birds an abundance of exercise. The last meal should be plenty of whole corn, so that they can fill their crops to capacity.

Frosted Combs—The fertility of the breeding male is often impaired for a short time by frosted comb. If a good warm pen is not available for the sole use of the male birds, let them remain with the flock during the cold period that precedes the breeding season.

Protect Hens From Dampness—One way to protect the hens from winter dampness is to build the cement floor of the house on a layer of coarse stones six to ten inches thick.

Big Factory Sale on One Man Stump Pullers

IF YOU HAVE ANYTHING TO BUY OR SELL, insert in our classified columns. When you insert a single advertisement your message reaches over 120,000 farm folks.

Find What CANADA has to offer YOU!

If your dream of success seems like a hopeless ambition, if you are discouraged trying to get ahead on high priced land, if your present location fails to give you opportunity, there is a new deal for you, a new chance in the fertile, virgin farms of Western Canada, where wheat produces 20 to 40 bushels to the acre, where the 1922 crop was biggest in history, where oats, barley and hay and fodder crops are the basis of a great dairy industry, and a man's work brings him success and prosperity.

Low Priced Land—the Last Great West

In Western Canada you still can buy virgin prairie land at \$15 to \$20 per acre, on long terms if desired, near to town, railroads, etc.—land such as has for many years produced the world's prize winning wheat, oats, barley, flax, rye, alfalfa. Canada had no "war time" land boom; prices are not inflated—you get in on the ground floor.

Taxes Favor the Farmer as Values Increase

The tax laws of Western Canada encourage the producing farmer. The tax on land is reduced when it is brought under cultivation—while on your buildings, machinery, improvements, personal property, automobile, there is no tax at all. A single crop is often worth more, acre for acre, than the cost of the land.

Rent Now—Buy Later Pay Out of Profits

Canada welcomes the industrious settler. What you have now isn't so important. If your capital is small, or you cannot sell your present holdings to advantage, rent a fertile Canadian farm and "try it out" for a season or two. Make a good living, increase your capital, and buy later. Farms may be rented from successful settlers on easy terms; in some cases with option of purchase.

[Buy on Exceptional Terms—32 Years to Pay

For the benefit of those wishing to buy land a national non-profit sharing organization—the Canada Colonization Association—has been established with head office at Winnipeg, and United States office at St. Paul. This Association offers selected land convenient to railways—much of it at \$15 to \$20 per acre—on very small cash payment; no further payment until third year; balance extended over thirty years, but purchaser may pay up and obtain title at any time if desired. Interest six percent per annum on deferred payments.

We Help Find Your Opportunity

The Canadian Government maintains information bureaus in leading American centers, where you can get full information, without cost, about all parts of Canada. The men in charge are Government officials, interested only in the service of the prospective settler.

Every man who milks cows for a living knows that prepotency, ability to "breed on," is one of the best reasons for Holsteins.

HOLSTEIN PREPOTENCY MEANS:

Influence of 2,000 years of Breeding for Great Size and Ruggedness combined with highest yield - Strong Healthy Calves - Assured improvement in grading up common cows with Holstein bulls.

Let Us Tell You the Story of the Holstein Cow.

either for sale or purchase. Can best be reached through a live medium. Classified advertisements in the AMERICAN AGRICULTURIST bring substantial results from both near and far.

The Valley of the Giants—By Peter B. Kyne

"ALL of which appears to be sound business logic, Uncle Seth." He nodded. "Item three," he continued, and ticked it off on his third finger: "I want to see the feeder for a transcontinental line built into Sequoia from the south, for the reason that it will tap the Cardigan holdings in the San Hedrin watershed and prove of tremendous value, consequently I would prefer to have that value created *after* Cardigan's San Hedrin timber has been merged with ours."

"And so—"

"I must investigate this N. C. O. outfit and block it."

"How for instance?"

"I haven't considered the means, my dear. Those come later. For the present I am convinced that the N. C. O. is a joke, sprung on the dear public by the Trinidad Redwood Timber Company to create a real-estate boom, and boost timber-values. Before the boom collapses, the Trinidad people hope to sell their holdings and get from under."

"Really," said Shirley, demurely, "the more I see of business, the more fascinating I find it."

"Shirley, it's the grandest game in the world."

"And yet," she added musingly, "old Mr. Cardigan is so blind and helpless."

"They'll be saying that about me some day if I live to be as old."

"Nevertheless, I feel sorry for him, Uncle Seth."

"Well, continue to waste your sympathy on him rather than on his son," he retorted laughingly.

"Oh, Bryce Cardigan is able to take care of himself."

"Yes, and mean enough."

"He saved our lives, Uncle Seth."

"He had to—in order to save his own. Don't forget that, my dear." Carefully he dissected a sand-dab and removed the backbone. "I'd give a ripe peach to learn the identity of the scheming buttinsky who bought old Cardigan's Valley of the Giants," he said presently.

"You should have bought it when the opportunity offered," she reminded him. "You could have had it then for fifty thousand dollars less than you would have paid for it a year ago. John Cardigan was beaten and acknowledged it, and I think you might have been little more generous to your fallen enemy, Uncle Seth."

"I dare say," he admitted lightly. "However, I wasn't, and now I'm to be punished for it, my dear: so don't roast me any more. By the way, that speckled hot-air fellow Ogilvy is back in town again. Somehow, I haven't much confidence in that fellow. I think I'll wire the San Francisco office to look him up in Dun's and Bradstreet's. Folks up this way are taking too much for granted, but I for one intend to delve for facts—particularly with regard to the N. C. O. bank-roll and Ogilvy's associates. I'd sleep a whole lot more soundly to-night if I knew the answer to two very important questions."

"What are they, Uncle Seth?"

"Well, I'd like to know whether the N. C. O. is a screen to hide the operations of the Trinidad Redwood Timber Company."

"It might," said Shirley, with a sudden flash of intuition, "be a screen to hide the operations of Bryce Cardigan."

AFTER a pause the Colonel made answer: "No, I have no fear of that. It would cost five hundred thousand dollars, and the Cardigans haven't got that amount of money. What's more, they can't get it."

"But suppose," she persisted, "that the real builder of the road should prove to be Bryce Cardigan, after all. What would you do?"

Colonel Pennington's eyes twinkled. "I greatly fear, my dear, I should make a noise like something doing?"

"Suppose you lost the battle?"

"In that event the Laguna Grande Lumber Company wouldn't be any worse off than now. The principal loser would be Miss Shirley Sumner, who has the misfortune to be loaded up with Cardigan bonds. And as for Bryce Cardigan—well, that young man would certainly know he'd been through a fight."

"I'd love to see you beat him!"

"Then you really want me to smash him?"

"You got me into this fight by buying Cardigan bonds for me," she replied meaningly, "and I look to you to save the investment or as much as possible."

The Colonel rose hastily, came around the table, and kissed her paternally. "My dear," he murmured, "you're such a comfort to me. Upon my word, you are."

"I'm so glad you have explained the situation to me, Uncle Seth."

"I would have explained it long ago

had I not had a sneaking suspicion that despite everything, young Cardigan might—er—influence you against your better judgment and—er—mine."

"You silly man!"

He shrugged. "One must figure from every angle, my dear, and I should hesitate to start something with the Cardigans, and have you, because of foolish sentiment, call off my dogs."

SHIRLEY thrust out her adorable chin aggressively. "Sick 'em, Tigel!" she answered. "Shake 'em up, boy!"

"You bet I'll shake 'em up," the Colonel declared joyously. He paused with a morsel of food on his fork and waved the fork at her aggressively. "You stimulate me into activity, Shirley. My mind has been dull of late; I have worried unnecessarily, but now that I know you are with me, I am inspired. I'll tell you how we'll fix this new railroad." Again he smote the table. "We'll sew 'em up tighter than a new buttonhole."

"Do tell me how," she pleaded eagerly.

"I'll block them on their franchise to run over the city streets."

"How?"

"By making the mayor and the city council see things my way," he answered dryly. "Furthermore, in order to enter Sequoia, the N. C. O. will have to cross the tracks of the Laguna Grande Lumber Company's line on Water Street—make a jump-crossing—and I'll enjoin them and hold them up in the courts till the cows come home."

"Uncle Seth, you're a wizard."

"Well, at least I'm no slouch at looking after my own interests—and yours, Shirley. In the midst of peace we should be prepared for war. You've met Mayor Poundstone and his lady, haven't you?"

"I had tea at her house last week."

"Good. Suppose you invite her and Poundstone here for dinner some night this week. Just a quiet little family dinner, Shirley, and afterwards you can take Mrs. Poundstone upstairs, on some pretext, while I sound Poundstone out. They haven't asked for a franchise yet; at least the "Sentinel" hasn't printed a word about it; but when they do, of course it will be advertised for sale to the highest bidder. Naturally, I don't want to bid against them; they might run the price up on me and leave me with a franchise on my hands. I feel certain, however, I can find some less expensive means of keeping them out of it—say by convincing Poundstone and a majority of the city council that the N. C. O. is not such a public asset as its promoters claim for it."

She nodded. "I shall attend to the matter, Uncle Seth."

Five minutes after dinner was over, Shirley joined her uncle in the library and announced that His Honor, the Mayor, and Mrs. Poundstone, would be delighted to dine with them on the following Thursday night.

CHAPTER XXII

TO return to Bryce Cardigan:

Having completed his preliminary plans to build the N. C. O., Bryce had returned to Sequoia, prepared to sit quietly on the side-lines and watch the peppery Buck Ogilvy go into action.

In his last year at college Ogilvy's father, a well-known railroad magnate,

had come a disastrous cropper in the stock market, thus cutting short Buck's college career—which has probably the very best thing that could happen to his father's son. For a brief period—perhaps five minutes—Buck had staggered under the blow; then his tremendous optimism had asserted itself, and while he packed his trunk, he had planned for the future.

Ogilvy's return to Sequoia following his three weeks' tour in search of rights of way for the N. C. O. was heralded by a visit to Bryce Cardigan. As he breasted the counter in the general office, Moira McTavish left her desk and came over to see what the visitor desired.

"I should like to see Mr. Bryce Cardigan," Buck began in crisp business-like accents. He was fumbling in his card-case and did not look up until about to hand his card to Moira—when his mouth flew half open, the while he stared at her with consummate frankness. The girl's glance met his momentarily, then was lowered modestly; she took the card and carried it to Bryce.

"Hum-m-m!" Bryce grunted. "That noisy fellow Ogilvy, eh?"

"His clothes are simply wonderful—and so is his voice. He's very refined."

Bryce rose and sauntered into the general office.

"Mr. Bryce Cardigan?" Buck queried politely.

"At your service, Mr. Ogilvy. Please come in."

"Thank you so much, sir." In the private office, he closed the door carefully behind him, and stood with his broad back against it.

"Buck, are you losing your mind?" Bryce demanded.

"Losing it? I should say not. I've just lost it."

"I believe you. If you were quite sane, you wouldn't run the risk of being seen entering my office."

"Tut-tut, old dear! None of that! Am I not the mainspring of the Northern California Oregon Railroad and privileged to run the destinies of that soulless corporation as I see fit?" He sat down, crossed his long legs, and jerked a speckled thumb toward the outer office. "I was sane when I came in here, but the eyes of the girl outside—oh, yow, them eyes! I must be introduced to her. And you're scolding me for coming around here in broad daylight. Why, you duffer, if I come at night, d'ye suppose I'd have met her?"

"You like Moira's eyes, eh?"

"I've never seen anything like them. I have little prickly sensations, like ants running over me. How can you descend to labor with an houri like that around. Oh, man!"

"Love at first sight, eh, Buck?"

"I don't know what it is, but it's nice. Who is she?"

"SHE'S Moira McTavish, and you're not to make love to her. Understand? I can't have you snooping around this office after to-day."

Mr. Ogilvy's eyes popped with interest. "Oh," he breathed. "You have an eye to the main chance yourself, have you? Have you proposed to the lady as yet?"

"No, you idiot."

"Then I'll match you for the chance to propose first." Buck produced a dollar and spun it in the air.

"Nothing doing, Buck. Spare yourself these agonizing suspicions. The fact is that you give me a wonderful inspiration. I've always been afraid Moira would fall in love with some ordinary fellow around Sequoia—propinquity, you know—"

"You bet. Propinquity's the stuff. I'll stick around."

"—and I've been on the lookout for a fine man to marry her off to. She's too wonderful for you, Buck, but in time you might learn to live up to her."

"Duck! I'm liable to kiss you."

"Don't be too precipitate. Her father used to be our woods-boss. I fired him for boozing."

"I wouldn't care two hoots if her dad was old Nick himself. I'm going to marry her—if she'll have me. Ah, the glorious creature!" He waved his arms desparingly. "O Lord, send me a cure for freckles. Bryce, you'll speak a kind word for me, won't you?"

"Certainly. Now come down to earth and render a report on your stewardship."

"I'll try. To begin, I've secured rights of way, at a total cost of twelve thousand, one hundred and three dollars and nine cents, from the city limits of Sequoia to the southern boundary of your timber in Township Nine. I've got my line surveyed, and so far as building the road is concerned, I know exactly what I'm going to do, and how and when I'm going to do it."

"What steps have you taken toward securing your material?"

"Well, I can close a favorable contract for steel rails with the Colorado Steel Products Company. Their schedule of deliveries is O. K. as far as San Francisco, but it's up to you to provide water transportation from there to Sequoia."

"We can handle the rails on our steam schooners. Next?"

"I HAVE an option of a rattling good second-hand locomotive down at the Santa Fé shops, and the Hawkins & Barnes Construction Company have offered me a steam shovel, half a dozen flat-cars, and a lot of fresnos and scrapers at ruinous prices. However, it is first-rate equipment for us, because it will last until we're through with it; then we can scrap it for junk. We can buy or rent teams from local citizens and get half of our labor locally. San Francisco employment bureaus will readily supply the remainder, and I have half a dozen fine boys on tap to boss the steam shovel, pile-driver, bridge-building gang, track-layer and construction gang. And as soon as you tell me how I'm to get my material ashore and out on the job, I'll order it and get busy."

"That's exactly where the shoe begins to pinch, Pennington's main-line tracks enter the city along Water Street, with one spur into his log-dump and another out on his mill-dock. From the main-line tracks we also have built a spur through our drying-yard out to our log-dump and a switch-line out on to our mill-dock. We can unload our locomotive, steam shovel, and flat-cars on our own wharf, but unless Pennington gives us permission to use his main-line tracks out to a point beyond the city limits—where a Y will lead off to the point where our construction begins—we're up a stump."

"Suppose he refuses, Bryce. What then?"

"Why, we'll simply have to enter the city down Front Street, paralleling Pennington's tracks on Water Street, turning down B street, make a jump-crossing of Pennington's line on Water Street, and connecting with the spur into our yard."

"Can't have an elbow turn at Front and B streets?"

"Don't have to. We own a square

(Continued on page 231)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

WHEN Buck Ogilvy struck Sequoia, things began to hum. He was Bryce Cardigan's old college friend, but because Buck came to push a railroad which Bryce was secretly backing they had to seem unacquainted.

Old Cardigan had been beaten at every turn by the unscrupulous Colonel Pennington, but his son sensed a way to make the Cardigan timber accessible and defeat the Colonel's plan to starve them out. Things were complicated, however, by the fact that Bryce had fallen in love with the Colonel's niece, Shirley, who unknown to him had bought the Cardigan's Valley of the Giants, checkmating her uncle and giving Bryce the necessary funds to wage his fight.

A New Embroidery Design

And an Unusual Gingham Dress For All Sizes

GINGHAM, this year, won't be cheap. But here's a dress of extra quality material, in all sizes and several pretty colors, that has a "pre-war" price, even though the style is right up-to-date. Frankly, we are very proud to have secured this dress, and because it is such an unusual value, the New York department store which supplies it, is keeping the entire stock aside for American Agriculturist readers. Better order quickly and be sure of your color and size! (Not more than three will be sent to any one person.)

The dress has a Peter Pan collar, cuff and pockets with pique trimming.

Sleeves are one half length. There is a tie-back sash. Pearl buttons finish the vestee effect.

Sizes: 36, 38, 40, 42, 44, 46, 48, 50 and 54.

Colors—Blue, brown, gray, lavender and black checks.

Price. (prepaid) \$1.69 for all sizes.

To order this dress, send check or money order for correct amount to the Fashion Editor, American Agriculturist,

461 Fourth Avenue, New York. State size and color, and write name and full address clearly.

If this dress, or any article bought through the shopping service, is not satisfactory, it may be returned for an exchange, or for a refund. In that case, send the garment to the store from which it comes, with a letter stating what adjustment is desired. In case of any difficulty notify The Fashion Editor.

The Valley of the Giants

(Continued from page 230)

block on that corner, and we'll build across it, making a gradual turn."

"See here, my son," Buck said solemnly, "is this your first adventure in railroad building?"

Bryce nodded.

"I thought so; otherwise you wouldn't talk so confidently of running your line over city streets and making jump-crossings on your competitor's road. If your competitor regards you as a menace, he can delay you indefinitely."

"I realize that, Buck. That's why I'm not appearing in this deal. If Pennington suspected I was back of it, he'd move heaven and earth to keep me out of a franchise. Of course, since his main line runs on city property, under a franchise granted by the city, the city has a perfect right to grant me the privilege of making a jump-crossing of his line—"

"Will they do it? That's the problem. If they will not, you're licked, my son, and I'm out of a job."

"We can sue and condemn a right of way."

"Yes, but if the city council puts up a plea that it is against the best interests of the city to grant the franchise, you'll find that except in most extraordinary cases, the courts regard it as against public policy to give judgment against a municipality, the State or the Government of the United States. At any rate, they'll hang you up in the courts till you die of old age; and you have to have this line running in less than a year, or go out of business."

Bryce hung his head, thoughtfully. "I've been too cocksure," he muttered presently. "I shouldn't have spent that twelve thousand for rights of way until I settled the matter of the franchise."

"Oh, I didn't buy any rights of way—yet," Ogilvy hastened to assure him. "I've only signed the land-owners up on an agreement for any time within one year from date. The cost of the surveying gang and my salary and expenses are all that you are out to date."

(Continued next week)

EMBROIDERY FOR YOUR BEST PILLOWSLIP ENDS

Though gaily colored stitching is high in favor, no type of embroidery can ever dislodge from the favoritism of the particular woman the snowy-white work which offers such varied opportunity for daintiness and fineness.

Pillowslips seem to answer especially well to the craft of the embroiderer. A graceful, flowing design is illustrated in the picture and it will look extremely handsome in glossy white floss on your "company" beds. Eyelets or solid dots fill in the bowknot design; though perhaps a little harder to work,

eyelets are really the prettier and are worth the trouble of punching and working.

The transfer patterns, including two pillowslip ends, with the design reversed, and one plain scallop for the other edge, will be sent for 20c in stamps. This is another of the exclusive designs which American Agriculturist readers may purchase; it is not on sale elsewhere and can be bought only through the magazine.

Ask for E. 9 and address your order to the Handicraft Department.

This Catalogue will bring you a Saving on Everything you Buy this Spring

Millions of people will this Spring save money on everything they buy from this Catalogue.

Will you miss the saving that may as well be yours?

Millions of people buying from this book will secure at lower than market prices, goods of standard quality, goods of the long wearing service-giving kind.

This book offers you, too, a saving—and it offers you certain satisfaction, a guaranteed satisfaction with everything you buy, your money back if you are not satisfied.

Montgomery Ward & Co. is a *low-price house*. But for Fifty Years we have kept faith with the public. We never sell "cheap" goods to make a low price. Ward Quality is never sacrificed.

A saving made on your purchases at Ward's is a real saving—because there is always more than a dollar's worth of service for every dollar of the price.

Everything for the Home, the Farm and the Family

For the Home: This catalogue shows everything for the home and for every member of the family. Everything to wear—the best New York Styles. Everything for use or decoration, from furniture and carpets to kitchen stoves.

For the Man: Everything for the farm, everything for the automobile, everything in wearing apparel; tools, farm equipment, poultry and stock supplies. There are many dollars to be saved through buying everything from this Catalogue.

One copy is yours free. You only need to return the coupon.

Your Orders Shipped Within 48 Hours

Our new system of filling orders is now six months old. Six months' successful operation enables us to say—Your order will be shipped immediately; certainly in less than 48 hours.

As a matter of fact, most of the orders are now being shipped the same day they are received.

With the lowest market prices, goods always of Ward Quality, and the most prompt and accurate service, it is true indeed that: "Montgomery Ward & Co., the Oldest Mail Order House is Today the Most Progressive."

18 Ever-Blooming ROSE BUSHES

YOURS AS A GIFT For Only 2 Yearly Subscriptions for *American
Agriculturist* at \$1.00 each. Your own renewal may
be sent as one of the two subscriptions required.

No reader can afford
to miss this mammoth
gift offer—the greatest
collection of plants we
have ever given.

What can add more
to the charm and beauty
of your home than
borders of exquisite
fragrant roses? Roses
breathe sentiment and
happiness. No home is
complete without this
remarkable collection
of 5 pink, 4 white,
5 red and 4 yellow
roses. One of them is
a climber. These rose
bushes are guaranteed to
reach you in good condi-
tion in proper time for
planting in your locality.

The entire lot of 18 rose-
bushes will be sent you,
postpaid, for only two yearly
subscriptions at \$1.00 each.

Weaving Rugs Without a Loom

Mrs. George Gray Tells How to Do It—Spring Dresses for Girls

THERE are looms galore for hand-
weaving, but not many people know
how to weave without a loom.

The requisites are a board as wide
as you plan to have your rug, and a
long flat piece of board to carry the
rags. We will call this the needle. The
rags should be prepared by cleaning if
necessary, cutting an inch wide, and
dyeing any desired color. They are
used for both warp and filler. The
warp should run up and down and the
filler across. The wider way of the
board is used for width of the rug.
White is usually used for the warp,
although any preferred color may be
used. Before beginning, we must de-
cide as to the dimensions of the rug.
Two and a half times the width is a
good proportion. A straight line drawn
a short distance from the top is a
necessity for keeping the work even.
Having decided the length of our rug,
we have our warp strips a little more
than twice its length.

Beginning at the bottom of the
board, lay a strip of the warp smooth-
ly on the board, tacking it with a carpet
tack near the base. Carry the warp
up the board and tack on the straight
line. Twist the material sharply and
tack again half an inch farther on the
line. Carry material down the board
and fasten with another tack. Take
the second strip and repeat process,
continuing until the board is covered.
Your loom will then be warped and
ready for the weaver. A piece of yard-
stick makes a good weaver. It should
be pointed at one end and have an eye
cut in the other. Have a plan for your
color scheme and use the colored mat-
erial, as it is needed to carry this out.

Having threaded your needle, you
are ready to begin weaving. This is
very easy, for it is just like darning—
under one and over the next. The end
should be fastened just below the cor-
ner tack on upper end. It is best to
have the carpet rags rolled in balls. If

the ball is put in a small pail it will
unroll as needed without tangling. The
rags should be pushed firmly up toward
the line of tacks and care be taken to
keep the work smooth and even. Rugs
require a border at each end, so it is
well to plan to weave about four inches
like the center is to be, then change to
another desired color, and weave about
three inches. Then thread needle again
with center material and repeat pro-
cess until you have three stripes of the
contrasting color; then use center ma-
terial until you reach the bottom of the
board where the warp is tacked.

The rug must now be moved up.
Tacks are taken out and the rug pushed
up to the top of the board and each
warp tacked a little above the weaving.
Fasten the warps at bottom of the
board and proceed with weaving. Meas-
ure where your border comes, and have
both ends of rug exactly alike. By
moving the rug you are able to weave
any length you wish, even to carpet for
the stairs. If the ball runs out or
thread breaks sew more on and proceed.
When weaving is completed, cut the
warps an inch longer than rug and turn
them under, fastening them securely
with needle and thread.

STYLES FOR YOUNGSTERS

Gone are the old days when our chil-
dren were dressed like miniature men
and women. Now-a-days they have
styles which really suit them, planned
especially for play or party wear, and
easy for mother to make and launder.

Such a frock is No. 1671, as simple
a little dress as one could imagine, yet

ideal for any soft fabric. Only two
pieces of material are required; you
stitch up the shoulder and side seams,
finish the neck and add a pretty ribbon
girdle and there you are!

No. 1671 cuts in sizes 8, 10, 12 and 14
years. Only 1½ yards of 36-inch material are
required for size 8. Price of pattern 12 cents.

If you are look-
ing forward to
graduation or if
your daughter
needs a party
frocks for spring
festivities, No.
1668 will solve
the problem. No-
tice the tiers of
material in over-
skirt fashion and
the bertha collar,
both new features
this year.

No. 1668 comes
in sizes 8, 10, 12
and 14 years. The
8 year size takes
3¾ yards of 40-
inch material with
6¾ yards edging and
1¾ yards ribbon.
Price 12 cents.

To Order:
Write your name
and address
plainly, enclose 12
cents in stamps or coin (wrap coin
carefully) and send your order to
Fashion Department.

From the layette for the new baby
to the comfortable frock for grandma,
the spring catalogue shows styles for
every use and every age. Commence-
ment dresses, house frocks, aprons,

boys' suits, men's shirts, all are includ-
ed, and many more as well.

Then too, there are dressmaking
lessons, embroidery designs and hints
on choosing colors and becoming lines.
It is a treasure-box of style information
for the woman who sews at home.

And it costs only ten cents. The
books are selling rapidly, so get your
order in at once. Add five two-cent
stamps to your pattern order and send
it to Pattern Department American
Agriculturist, 461 Fourth Avenue, New
York City.

USES OF SALT

MABEL FERN MITCHELL

Salt in water cleans glass bot-
tles.

Salt added to snow makes it
much colder.

Salt and hot water thaws
frozen drain pipes.

Coarse salt is fine to rub over
hot irons.

Salt and hot water sometimes
stops the itching of chilblains.

Salt added to cold or boiled
starch imparts a gloss.

Cut flowers can be kept fresh
by adding salt to water.

Salt thrown in any burning
substance stops smoke and blaze.

Heat salt and pack in flannel
bag, in absence of hot-water
bottle.

Apply a solution of salt and
vinegar to your teacups to re-
move stains.

Soda and salt moistened with
water will relieve the sting of a
bee.

Salt makes the teeth white.

Clothes stained by perspiration
may often be washed clean if
soaked in salt water.

Salt sprinkled on ink freshly
spilled on carpets will aid in the
removal.

A pinch of salt added to eggs
while beating will make a stiffer
and quicker froth.

Salt and warm water used to
bathe tired eyes will greatly re-
fresh them.

Stubborn grease spots are
often removed when salt is dis-
solved in the alcohol used in
cleaning.

Soak your brooms in hot wa-
ter in which is some dissolved
salt. They will wear longer and
will not break so easily.

When a broiling fire is desired
and your fire is only a dull,
smoldering one, put on a handful
of salt.

Soak your delicate colored
wash dresses in salt water be-
fore laundering. This sets the
color. Then pour the salt water
down the drain pipes.

Guard Against Pneumonia

Dr. Charlotte C. West Warns Us of Disease

PNEUMONIA, one of the most prevalent diseases to-day, ranks higher than tuberculosis in mortality.

"It occurs everywhere, in all climates, at all times of the year, in both sexes, and at all ages, it is more frequent however, during the cold months of the year. It is common in children under six years; between the sixth and fifteenth year, the predisposition is less marked, but for each subsequent decade it increases."

I have quoted from a famous authority. I want to impress my readers with the wide prevalence of the disease, and with the fact that little children and old people are most susceptible. March, also, is the month in which it is most prevalent.

Pneumonia, contrary to popular belief, is an infectious, indeed a contagious disease. Because of ignorance, those who succumb to pneumonia are not isolated, as is the case with scarlet fever, smallpox and the like. The germ of pneumonia leaves the body mainly through discharges from the mouth and nose and enters the system through the same channels. The infection is spread directly and indirectly through cups, thermometers, handkerchiefs, and other objects contaminated with the discharges. This serious—often fatal—disease cannot exist unless the germ is present in your tissues; even then you will not succumb to it if you are in a state of health to resist.

The danger at present for outbreaks of local epidemics lies in the fact that world conditions are affecting us. For instance: as to fuel, so that exposure to cold is great; as to food, so that a lowered vitality is greater; as to strain upon the nervous forces, so that the general morale is lowered. In addition to these agencies, is the weather. A low, but steady temperature brings less danger than do abrupt changes.

Preventive Measures You Can Take

Overfatigue from any cause must be avoided. The body chills more quickly when it is not perfectly fed. A person whose enthusiasm leads him to work when he is tired and should rest, or leads him to forgo a meal when the body requires fuel, is inviting pneumonia at the present time. So those who overwork and underfeed themselves run a great danger.

A certain amount of fuel is indispensable to the body's needs. But the nature of this fuel is vitally important. Starches and sugars will not take the place of fat when supplying the body with heat-producing, energizing fuel. The resistance of the body to pneumonia and similar diseases is weakened when the proper amount of fat in the diet is decreased. We need more fat to keep us warm in cold weather.

I have again and again called attention to the importance of fresh-air breathing, of living as much as possible out of doors, of flooding the rooms with fresh air and sunshine. To prevent pneumonia it is essential to keep up the vitality of the body with an abundance of fresh air, proper food and, thirdly, rest. A proper amount of sleep in a well-aired room is therefore highly important.

Shun rigidly all those who cough, sneeze and spit. Do not use articles of any description used by another.

This holds especially true of the handkerchief, the family towel, face cloth and drinking cups. In some families these articles are common property. Such practices are to be highly con-

Charles Ralph Hudson didn't want his picture taken. But his cousin, Mrs. Harry Bitz, got this rear view, which at least shows us that Charles Ralph is a pretty solid citizen. She also tells us that he has large blue eyes very rosy cheeks, a round well-shaped head and is very muscular and strong. He's a bright

demned and should be taboo if for no other reason than that of health. Every member of the family should have his own toilet articles, towels and so on, and use these only.

Colds predispose to pneumonia, therefore avoid draughts and sudden changes in temperature, as in going from a dry superheated air into cold damp air. Those who perspire freely should be extremely careful of exposure.

Too much cannot be said on the subject of overeating, especially habitual overeating. Those whose systems are clogged with waste materials become ready victims to this disease. Children should be especially guarded both as to diet, warmth and fresh air.

Modern Treatment is Intelligent

The protective serum against acute pneumonia is now an assured thing. Thanks to the splendid researches and achievements of the scientists connected with the Rockefeller Institute, it is out of the experimental stage and by its use not only the nature of the particular variety of pneumonia from which the patient is suffering can be determined, but the disease can be aborted.

Until quite recently the treatment of pneumonia consisted in shutting the patient up in a closed, almost sealed room, stifling him under quantities of bedding and hastening his end with drugs that had no effect on the disease. Some years ago a country doctor was almost flayed alive because he insisted upon treating a little pneumonia patient with fresh air, and this state of mind on the subject of fresh air is surprisingly widespread.

In many sections of the country, physicians find great difficulty in persuading the family of the rationale of this mode of procedure and frequently find that windows are immediately lowered the moment the doctor's back is turned. The room must be freely ventilated even if a direct current of air is necessary for this; as long as the fever keeps up the patient cannot take cold. It is only necessary to see the effects to be convinced of the value of fresh air, in reducing many distressing symptoms, notably that of labored breathing. Attendants should of course be warmly clad.

In the robust, typical cases of pneumonia require little besides hygienic treatment, but since one can never tell when and what untoward symptoms may arise, a physician must be consulted the instant the first signs appear. These are the initial chill, fever, cough and pain through the chest. All sputum (coughed up matter) should be burned. The germ or microbe giving rise to pneumonia swarms in great numbers in the sputum of all patients, so the importance of immediately burning up all expectorated matter is clear.

Pneumonia attacks particularly alcoholics. It is the height of folly for persons to drink this rank poison (much of which to-day is of particularly deadly nature) and therefore lower the resistance of the body to disease germs.

In many acute infectious diseases, a second attack rarely occurs. This is called immunity. Now pneumonia does not confer immunity to those who have had it. On the contrary the lungs have become so weakened that future attacks are more than liable to occur.

There are several varieties of acute pneumonia, which I will not enter into here, including double pneumonia, which is especially dangerous.

youngster, and very observant. His father, Arthur Hudson of Memphis, N. Y., is an American Agriculturist subscriber and his young son, they say, is well disciplined and never doubts the authority of his parents. Evidently Charles believes that an American Agriculturist subscriber must be right about everything.

82¢ Buys All the Wall Paper for An Entire Room

AMERICAN AGRICULTURIST

461 FOURTH AVE., NEW YORK CITY

Reviewing the Latest Eastern Markets and Prices

POTATO MARKET BETTER

DUE to cold weather, car shortage and bad roads in the country, there was a good market for potatoes last week. The demand began about Washington's Birthday and prices for States firmed up from \$2.00 per 150-lb. sack, delivered in carlots, to \$2.20, with quotations ranging from \$2.10 to \$2.40. Bulk, \$1.25 cwt. to \$1.35. Sales in the yards, depending on quality, were made from \$2.15 to \$2.50 per 150-lb. sack; a few quoted as high as \$2.65. Long Islands in light supply (there are only a few cars yet in the hands of growers) sold as high as \$5 per 180 lbs. bulk in some yards. At Pittsburgh March 1 State round whites brought \$2.75 per 150-lb. sack.

As long as present conditions prevail in the country and the New York City arrivals are light, the demand ought to continue.

Total carlot shipments in the country, including both old and new crops potatoes, are running several thousand ahead of last year at this time, although shipments of late crop potatoes are about 5,000 cars below last year. Shipments of Long Island potatoes are over 2,000 cars in excess of last year to date, but up-State New York is nearly 4,000 cars below last year. Maine is 7,000 cars behind last year. The United States Department of Agriculture estimates a much smaller acreage of early Irish Cobbles to be planted in Alabama, Florida, North Carolina, South Carolina, Texas and Virginia. It is possible that in spite of the heavy production of late crop potatoes last fall, the two factors of destruction of crop because of discouragement and neglect in the West and the shortage in new crop potatoes, may keep the market in the East from breaking as sharply as expected with warmer weather.

HIGH CABBAGE PRICES CONTINUE

Cabbage continues very scarce and good Danish white sold last week at \$50 to \$55 per ton in New York. Some New York buyers went up into the country and bought cabbage from growers at \$30 per ton by paying cash for it, while shipments sent to New York on consignment realized \$40 per ton net f. o. b. shipping point for the shippers. Southern new cabbage shipments so far this season amount to only 852 cars, compared with 2,730 cars up to February 25 last year. The market will probably hold up till new-crop shipments become heavier, but warmer weather will release a lot of late cabbage that cannot be shipped under present conditions. The Pittsburgh market has been higher than New York, and on March 1 white Danish was quoted there at \$70 to \$80 per ton, wholesale bulk.

APPLE RECEIPTS LIGHT

Owing to the light receipts last week, the market continued firm and active for fancy barreled apples of either red or green varieties. The f. o. b. market at Rochester for A grade 2½-inch Baldwins was \$4.75 to \$5 per bbl. and for Greenings \$4.50 to \$4.75.

Wholesale prices at New York on barreled apples March 1, per bbl., A grade, 2½-inch, were:

VARIETY	Best	Fancy	Ordinary
Baldwin...	\$5.25@5.50	\$5.75	\$5
Greening...	5.50@5.75	6	4.75@5
King.....	5 @5.25	5.50	4.50@4.75
N. Spy....	7 @8	9 @10	

EGGS COME DOWN GRADUALLY

The top quotation on extra fancy New Jersey eggs was down to 45c per dozen March 1, compared with 48c on the previous Friday. Receipts at New York are increasing, and exceed those of last year since January 1 by over 60,000 cases. Total receipts in the four largest markets of the country are also in excess of last year by over 20,000 cases. Reports from most sections of the country indicate increased numbers of laying hens. The storage reserve is now nearly exhausted. The temporary advance in eggs, due to extreme cold weather, however, seems to have reduced consumption somewhat.

The demand for fancy nearby eggs has been active, however, and stocks cleaned up fairly well last week. Fancy hennery brown eggs now bring almost as high a price as fancy whites, top

quotation being 44c on March 1. To get such a price, the eggs must be a good dark brown color and large size. Cream-colored eggs are not wanted.

Wholesale prices on March 1 were about 1c lower per dozen than on corresponding date last year.

SPECULATION AFFECTS BUTTER MARKET

Last week wholesale prices on fresh creamery extras went up to 52½c, and then dropped to 49c. Speculative buying in the Chicago market undoubtedly had a considerable effect on prices and kept the tone firm. The situation was very sensitive, however, and prices dropped very sharply on March 1. The consumption has held up remarkably well in the face of prevailing prices. Stocks on hand in the four largest national markets last week showed some reduction, and the present cold storage holdings are extremely light for the season. The production of new

caused objection from some of the laboratories where these animals were used for experimental purposes. The Health Department has stated that shipments of live animals destined for hospitals and universities would be under embargo until the laboratory actually received them. Dealers having orders from these laboratories can have the embargo on the animals lifted by communicating with the Department of Health.

The prohibition of the sale of live animals unless sent to licensed slaughter houses has cut off a large part of the receipts.

LIVE STOCK PRICES LOWER

The New York market on practically all live stock was lower last week owing to decreased demand. The supplies of cattle were heavy and there was a fair supply of calves. There were practically no lambs from nearby sections. Calves both of Jersey City and New

from 15 to 10c per lb, on an average. There were very few dressed hogs from nearby sections. The prices ranged from 5 to 30c, depending upon weights and quality. White-skinner roasting dressed pigs, 10 to 15 lbs. weight, sold at 25 to 30c per lb.; 16 to 40 lbs., 20 @ 23c; 40 to 100 lbs., 12 @ 16c, and 100 to 150 lbs., 10 @ 12c.

MAPLE PRODUCTS

The market for maple sugar and syrup is quiet, although supply of cake sugar is light. Wholesale prices 25 @ 30c per lb. for sugar and \$1.60 @ \$1.70 for syrup. The large buyers are fairly well supplied till new run of syrup will be available. Consumer demand is light. Opportune time for producers to interest the public in maple syrup and sugar, is during the coming sap drawing season. A campaign of publicity and advertising would at that time do a lot to increase consumption.

HAY SHORTAGE RELIEVED

The acute shortage of hay at New York terminals, due to difficulties of transportation, was somewhat relieved last week. Receipts continue light, however, and the market steady. The values of hay shipments were not clearly defined, and prices depended somewhat on willingness of dealers who had hay to take advantage of shortage. Most sales ranged from \$26 to \$30 per ton, with some at even higher prices.

With milder weather, country roads may be in such bad shape as to check shipping, and the market may continue good for some time. It would seem desirable to get hay to market as long as conditions remain as at present.

The railroad's system of issuing permits through New York dealers for shipment of hay has been repeatedly criticised in these columns. It has some arguments in its favor, of course, but, on the whole, it is a pernicious system. If permits are to be issued at all, they should go out through some public agency, such as the Department of Farms and Markets, or a committee in which shippers and receivers are represented. The whole machinery for handling hay shipments in the New York market creaks with antiquity.

FEED MARKET QUIET

Offerings of feed stuffs were liberal at Buffalo last week, but prices continued fairly firm. Bran and middlings were in greatest demand. Quotations on carlots f. o. b. Buffalo in 100-lb. sacks, March 1, were: Gluten feed, \$46.50; cottonseed meal, 36 per cent, \$47.75; cottonseed meal, 43 per cent, \$53; oil meal, 33 to 34 per cent, local billed, \$50; dried brewers' grains, \$49; standard spring bran, \$35; hard winter bran, \$35.75; standard spring middlings, \$35; choice flour middlings, \$37.00; white hominy, \$33.80. Feed grains f. o. b. Buffalo, per bu.: No. 2 yellow corn, 84c; No. 2 white oats, 53c.

CASH GRAINS AT NEW YORK

The following were cash grain prices at New York March 1: No. 2 hard winter, \$1.31; No. 2 mixed durum, \$1.22½; No. 2 yellow corn, 91c; No. 2 mixed corn, 90½c; No. 2 white oats, 56c; rye, 95½c; barley, 81@82c; buckwheat, \$1.95 @ 2.25. At Chicago—No. 2 hard wheat, \$1.18½ @ 1.20½; No. 2 yellow corn, 73½ @ 74½c; No. 2 white oats, 45½ @ 47c; rye, 83½ @ 84c; barley, 65 @ 73c.

TRADING IN BEANS LIGHT

The New York market on dry beans continued quiet. Trading was mostly of light jobbing character. Feeling fairly steady on most varieties. Quotations March 1 follow: Marrows, domestic, \$10 @ 10.75; per 100 lbs., pea beans, medium, \$8.25 @ 8.50; red kidneys, \$8.50; white kidneys, \$9 @ 10.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on March 2:

Eggs, Nearbys (cents per dozen)			
New Jersey hennery whites uncandled, extras...	43 @45	Buffalo	Phila.

Sheep, common to good ewes.....	3½ @ 5½	6 @ 8½
Hogs, Yorkers.....	9 @ 9¼	8¾

butter is still running considerably ahead of last year. Prices now are below the level of most of the foreign butter markets, and no further new shipments are being directed this way. Only a small shipment of 1,000 boxes of Argentine butter arrived last week. In spite of the decline on March 1, the prospect is for a continued firm market.

CHEESE MARKET STEADY

The production of cheese in the East has not increased materially. Only a few lots have come to New York and trading on these has been rather quiet, since the only large buyers have been the grinders. There has been some export inquiries for fresh cheese, English markets being high, but the prices bid have not yet been high enough to secure any stock here. In the West the making of fresh cheese is gradually increasing and is still running heavier than last year.

The wholesale market for cheese has been more active, however, and stocks of held cheese at all the Eastern markets have been reduced to an extremely low point for the season. Fancy, held, State flats which are in the hands of a few dealers are very firm and show a tendency to advance. Feeling is generally steady on fresh State flats, spot offerings of which are light. A good many of the fresh cheeses now being made are washed curds of which comparatively few are coming to this market. State whole milk flats, average run, white and colored were quoted March 1, at 28 @ 28½c for held and 26c for fresh.

NEW RULING ON LIVE ANIMALS

The recent ruling of the New York City Health Department prohibiting the sale of live animals unless first sent to the licensed meat slaughter houses has

York sold at 5 to 15c per lb., prime stock bringing 14 to 15c. Cattle ranged from 5½ to 10c per lb., bulls 5 to 6c, cows 2 to 5c and hogs mostly around 9c.

FIRST SPRING BROILERS ARRIVE

The first receipts of genuine spring broilers arrived last week and sold quickly at 85c each, 1 lb. weights. A few later sales were reported as high as 87c, the range going as low as 75c. There is a strong demand for these early spring broilers and additional shipments would move quickly. There is an over-supply of live fowls in the market and prices tend downward. The average run of live chickens received now are very staggy and little better than old roosters. Small chickens are in demand and selling at a wide range in prices depending upon size and quality. Express shipments of pigeons sold at 50 @ 55c per pair. Express shipments of live turkeys sold readily. Demand is largely for hens and on mixed lots 25c has been full price. Straight shipments of hens bring as high as 40c. The season for geese is rapidly waning, qualities are running poor and trading is slow with 20c as extreme price for the best.

HONEY MARKET STEADY.

Wholesale prices on honey have changed very little in several weeks but the feeling is a little better. White clover extracted per lb. sells wholesale at 9½ @ 10½c, in comb, \$3.50 @ \$4.50 per case; Buckwheat extracted, 8½ @ 10c, in comb, \$3 @ \$4.

DRESSED MEATS LOWER

Country dressed calves dropped from 25 to 16c per lb, on an average last week. Receipts were very heavy and market was weak. Dressed hot house lambs found a slow demand and dropped

The Modern Woman Writes the Modern Way

MOTHER is just as up-to-date as the rest of her family! When it comes to sending to the city for things her family needs she *types* her order quickly and clearly on the Underwood Portable, and her goods come through with never a mistake. She's sure of this, because she checks the goods against the carbon copy of her order.

The Underwood Portable saves time and work on all the writing done at home,—business and personal letters, recipes, extracts from

magazines, and orders for supplies from far away.

Young people at school who form the habit of typewriting lessons, essays, etc., are bound to win favorable attention from their instructors. What is more, in acquiring a knowledge of typewriting they have gained something that will be valuable to them for many years to come.

It is easy—in fact it's fun—to write on this compact, sturdy little typewriter. Typewriting is quickly learned on this machine—a few hours will make anyone reasonably proficient.

"I'll Tell The World"

The 67th Congress and the Farmer—By Chas. W. Holman

Maple Sirup Organization "Coming Back"

Producers Undaunted By Early Difficulties

By F. E. ROBERTSON

FROM the earliest times, those who have produced more maple sirup and sugar than they needed for their own use have followed the practice of selling their surplus to customers in local towns. In the more remote districts the farmers have sold their sirup and sugar in bulk, but nearly always these bulk sales have been gathered up by organized dealers who set their own prices and established their own grades.

This unsatisfactory situation naturally led the farmers to consider the problem of developing a marketing association of their own. It is not an easy matter for farmers to set up overnight and successfully operate a cooperative marketing association. For that very reason it is not at all strange that some of these movements have either failed or have not, out of hand, resulted in wonderful financial advantage to those who participate. It is a pity perhaps that cooperative movements cannot all become a success at once. On the other hand, few practical men will fail to understand the responsibility they are undertaking, and most of them fully appreciate that to develop successful cooperative marketing enterprises, whether with maple product or any other product, will take years of careful organization work, economical financing, and efficient management.

The Outgrowth of Local Effort

Growing out of numerous local attempts to pool and market sirup came the movement in the fall of 1921 to organize a more or less State-wide maple producers' association. After many conferences and a considerable amount of personal work and canvassing, a total of 974 producers were signed up on five-year contracts to market their product collectively through a central association known as the Maple Producers' Cooperative Association, Inc. This association then went ahead and equipped itself with the necessary machinery and supplies to handle the business. During its first season a total of over 149,000 gallons of sirup was consigned.

Unfortunately, the first year's experience has not given the financial returns that the producers were led to expect through the statements and promises made by irresponsible agents who helped to secure the contracts. As a result, therefore, of these empty and unwise statements, together with some inefficient management and questionable judgment in financing and marketing the crop, it became nearly impossible for the association to function on anything like an economical basis. Situations of this kind are readily seized upon by those opposed to co-operation among the farmers, and are used in the way of propaganda to weaken and break down the confidence of the members.

Much that is bad in the present situation of the Maple Producers' Association could have been avoided. That their first big endeavor could not have been highly successful may be their misfortune, but neither a bad situation nor a temporary failure should detract them from their goal which is to build up a marketing enterprise which will make it possible for the farmers to sell to better advantage the products of their labor.

When the maple producers were organized, the members were not required to assume any financial burden other than to pay a \$10 membership fee and to contribute 5 cents per gallon as a temporary

working fund. Regardless of the lack of capital, the management went ahead and purchased supplies and equipment to the value of nearly \$50,000. Nearly all of this money had to come from the sale of the sirup, and thus a charge which should have been spread over at least five years had all to be charged off against the first year's crop.

By a very crude plan of financing, so-called "trade acceptances" (notes payable) were

Covered buckets keep the sap free from twigs and other foreign matter

given the members when they delivered their sirup at the shipping point. These the members discounted at their local banks, in the main.

Apparently the supposition was that the sirup would be sold before these became due and they could thus be paid. But, as the sirup was not sold at the time of maturity, the trade acceptances had to be renewed for another period. The marketing was delayed, and again the acceptances began coming mature with no cash to pay them. Sirup had to be sold at a sacrifice in order to pay acceptances which could not be renewed. Many had to go to protest because of no cash to meet them. All of this caused confusion among the membership and some dissatisfaction. The association has been continually seeking an easy way out of these difficulties, but have not found any banks which could give them the kind of credit they needed.

Plan for Reorganization

As a last and final resort, the directors have now decided that unless the 974 members will themselves help to refinance the association through the purchase of the preferred stock in the amount of about \$50,000

the whole movement will be given up and the equipment scrapped. Had the members been required to purchase stock in amount sufficient to pay for the necessary equipment, they would have to-day an investment in their own enterprise, and there would be \$50,000 in the treasury of the association to pay up all of the outstanding trade acceptances (about \$42,000), and there would have been little dissatisfaction.

The farmers of New York State and elsewhere are now about to witness an attempt of some 974 farmers to save their association and safeguard their future in the matter of developing a satisfactory market for maple products.

If these men have not the necessary faith in the undertaking, or if they lack confidence in themselves, the association will be disbanded. The equipment will be scrapped for whatever it will fetch, and whatever loss is sustained in the dissolution will have to be distributed among the members. If this endeavor fails, many years will pass before they can again muster the courage to attempt another similar movement. But there is no reason why it should fail. If half of the 974 men will lend their credit to their own association by taking up the preferred stock as an investment, all of the obligations can be met, and they will have a going concern equipped to handle all of the sirup in New York State, and one year of valuable, if not entirely satisfactory, experience. The situation is a direct challenge to the sincerity and courage of these men. They, and they alone, can save the situation.

Sanitary Method for Better Maple Sirup

THE maple sirup placed upon our markets exhibits wide differences in quality. The consumer who is unfortunate enough to purchase the poorer grades may contend that the product has been adulterated. This might be true in some cases, but in others it is likely that an inferior product is the result of improper methods of collecting and caring for the sap used in its manufacture.

The best sirup is always secured from the early run of sap, which is secured during the first part of the season, while the nights are cold and freezing takes place at frequent intervals, and before any active growth in the tree begins. Sap produced late in the season contains micro-organisms, which have resulted from the development of the new buds and the reawakening of the life functions of the trees. These micro-organisms impart to the sap a disagreeable taste, which is commonly called "buddy." It is evident that changes which take place within the structure of the tree itself cannot be avoided, but there exist still other organisms which find their way into the sap after it has left the tree, whose action causes discoloration and degrade the sirup. These organisms include various forms of yeasts and bacteria.

The chemical composition of sap is such that it forms a satisfactory medium for the development of bacterial life if a suitable temperature for their growth exists. Thus, with the advance of the season, accompanied by rising temperatures, the growth and development of bacteria in the sap will increase accordingly.

A Doctor of the Old School

How Are Country Folks Going To Replace Men Like This?

AS Mr. Van Wagenen, in a recent issue of the American Agriculturist, told so pleasingly and well of the life of a country minister—"one who preaches"—let me tell a very little of the life of a country doctor I know—"one who practices."

The country doctor is fast passing away. The young doctors are locating in or near the city, so as to be handy to the hospitals, the libraries and lectures. Years ago all the small country towns, and even hamlets, had their doctors. Now where are they?

A young doctor, whom we will call Dr. Brown, settled over thirty years ago in a small village. In all these years, and in years to come, we hope his sturdy horse in winter and now, of course, his auto in summer travels over and over these same roads.

What a life his has been! He perhaps—ever busy—does not think it such a wonderful one, but in all these thirty years or more only twice has he turned back when he started on his trips. Once, in 1888, when a fearful storm blocked all the roads, and the other time, also in the winter, when he tipped over and smashed his cutter. Think what a record, going from Jerusalem to Jericho, and, no matter how cold the weather or bad the storm, never turning back.

I said to him one day: "Well, this has been a dreadful day, doctor."

"Has it?" he remarked absent-mindedly, measuring out medicine meanwhile. "I have to go out every day, and I've got so I never notice the weather."

Once in the winter time my husband was taken sick with a bad chill, was out of his head, etc. I sent for the doctor to come next morning. The roads were drifted full, with hardly a sign of a road to be seen. After an all-night vigil, I stood by the window looking out, my heart very heavy, for it did not look as though anyone could get through. Bells sounded up the road, and there was Dr. Brown, his horse wallowing through the drifts, the doctor plunging alongside, one hand on the reins, the other steadying the cutter. From zero my spirits rose to fever heat. The

By Mrs. R. M. ROBERTS

doctor put his horse in the barn and, brushing the snow from his feet, came in to warm his hands by the kitchen fire.

"Darned good roads you've got this way," was his only comment. Dr. Brown is possessed of an unfailing fund of good nature.

comes at once, and more than one young mother can tell you how Dr. Brown stayed by, and helped, and comforted, and encouraged her through her hour of trial, and was apparently as pleased as she when it was safely over.

Many strange, true stories he could tell if he wasn't such a busy man.

When John Smith was all torn and mussed up in a fearful accident, after Dr. Brown got there, did he try a few remedies and then say: "Hurry him to the hospital; I've done all I can," and so shift the responsibility? No, he thought of John Smith's family and of what he would say to his wife, and redoubled his energies and thought. For three long hours he could not feel one sign of a pulse, but he just shut his teeth and worked and kept on working, with the result that John Smith is on earth to-day just as good as ever. Was that all he did? Oh, no. He came the next day and helped fix a truck to put John's cot and John on it, and move him to his own home, and then, because there wasn't anyone to help John's wife get the clothes off him and his night shirt on, Dr. Brown went right to work and carefully cut away coat, shirt, and trousers and underwear, for John's wife was so fearful of

May His Number Increase in the Land

LAST summer we were visiting on a farm three miles from the nearest doctor. Little three-year old Bobby found and ate several green apples, which made him terribly ill and threw him into convulsions. Rushing to the telephone, we called the country doctor who, through the winter and summer storms of more than half a century, had been riding the hills and valleys of that countryside. Although he is an old man, in an almost incredibly short time he had crossed the range of hills and was coming down the road. As we saw him coming, and as we later watched his skillful fingers relieving the baby of the terrible pain, we thought of the many, many times he had brought similar relief and joy into hundreds of farm families, and we again had some appreciation of the feeling of love and gratitude of farm people toward their country doctor.

The splendid story of Dr. Brown, told so well on this page by a country woman, is the story of nearly all of the members of that great profession "who practice." Somehow or other, the grim demands and circumstances of their business, early weed out those of the profession who lack skill, courage or manliness, so that even though the doctor sees much of the seamy side of human nature and of life, he still is, almost without exception, an efficient workman, a jolly friend, a philosopher and "a very present help in the time of trouble." We are sorry that the number of country doctors is becoming less. What can we do to make it more attractive for him to stay with us? Any practical suggestions in the form of letters will be welcomed by American Agriculturist and paid for if we can use them.—The Editor.

You wonder after his visit whether he or his medicine helped you most.

When a young mother, trembling with terror of the unknown, dreading the birth of her first-born, telephones Dr. Brown, does he say carelessly: "Well, call me again when you think you need me." No, indeed, he

what might be found underneath she dared not do it alone.

Then there was the time they took Jay Wright's wife to the hospital in convulsions, and Dr. Brown went right along with her. After the doctors at the hospital had consulted together, they said: "Well, we can't operate now because of so and so, etc.; our professional reputation, you know, etc." Dr. Brown said promptly: "All right, then, I'll operate. I don't give a d— for mine," and operate he did, and as a result the mother and child are both living to-day.

I remember also the time he arrived on the scene just as Bessie Breen's baby was born and the distracted father was wringing his hands because there wasn't a woman on the place, and what should he do—go for her mother to dress the baby?

"Mercy, no," said Dr. Brown. "Don't wake the old lady up this time

(Continued on page 246)

Drifted roads and the darkest nights hold no terror for the country doctor. He manages to get through and make little or no fuss doing it. It is a part of the game

More Local Control in School Bill

WHEN the Committee of Twenty-one began its work three years ago it was agreed that any recommendations it might make for school improvement must be based upon the plain, common-sense educational needs of country people and their children. The committee went at its work determined to be guided by the facts and not by any prejudice or educational theories or "frills." To get the facts, hundreds of meetings were held where school patrons discussed pro and con the rural schools. Educational experts were employed by the committee and sent into nearly every rural county to learn firsthand what the problems of the local schools were, if any. All of the information obtained from this two-sided survey was reported back to the committee and from them certain conclusions, the more important of which we mention below, were drawn.

First—The district school has been a tremendous factor in American development. In some cases, however, rural people gave the school credit that should have gone to the country home instead.

Second—Rural schools as a whole have not kept up with progress with that made along other lines, so that country children are not getting in them an education in proportion to the cost of maintaining them.

Third—Because there are so many district schools rendering good work, and because of the difficulty of transporting children to larger schools in some sections, the committee recommends that district boundaries should be left as they are and that no consolidation should take place except by local vote. Under the present law, the State Department of Education and the local district superintendent can force consolidation.

Fourth—Because the administration of schools is essentially a local matter, the committee's suggestions provide for more local

control, but they make this local control more worth while and more effective by operating it through a community school board whose members shall be elected by the different districts in the community. The boundaries of each community are to be determined by a local commission.

Fifth—Because the committee found gross unfairness and inequalities in the tax rate of different districts having the same school facilities, it suggests that the tax unit be enlarged to the community instead of the local district, as it is at present. And it further suggests a larger financial aid for country schools from the State.

Sixth—The committee found many capable and self-sacrificing teachers at work in the country schools, but, on the whole, it also found that the country schools drew the poorer qualified teachers and that the better teachers gravitated toward the cities. Because of this the committee's suggestions provide for special courses in the normal schools for country teachers and for State aid for teachers who make a business of working in the country schools.

These suggestions are incorporated in the Education Bill which has been introduced in both Houses of the Legislature. The majority of the farm people who have attended the hundreds of meetings that have been held, and who have really made an effort to study these suggestions, have approved them.

Since the beginning of American history, the fundamental principle that farmers have insisted upon is an education for their children. The little log schoolhouse was as much a part of the rural community as was the church. The spelling matches, the debates, and the social affairs held in the community schoolhouse in the old days showed how the interest centered there.

The farm people of to-day are as alive as they ever were to the need of education. There are few farm parents who will make enough in the lifetime work on the old farm to leave their children very much money, but it is a rare parent indeed who does not want his child to have every right educational advantage and who does not wish to leave to his child something better than money, something that "moth nor rust cannot corrupt nor thieves break through nor steal."

Maple Producers Reorganizing

FOR some time there has been considerable dissatisfaction regarding the operations of the Maple Producers' Cooperative Association, which has its headquarters at Syracuse, N. Y. Because the success or failure of one cooperative organization more or less affects all the others, and because affairs of the association have been misrepresented by its enemies, we asked Mr. F. E. Robertson, who has just become manager of the association, to give us a full statement of the exact situation existing in the maple producers' organization. The absolutely frank and full discussion by Mr. Robertson on another page of this issue shows the determination of most cooperative leaders to take the members of their organizations entirely into their confidence.

Mr. Robertson is, by the way, also the manager of the New York State Sheep Growers' Cooperative Association, which is in many respects the most successful cooperative in the State.

Without question, the maple-sirup producers have considerable reason for being discouraged with cooperation. Still, when a man takes the wrong turn at the crossroads and learns his mistake, he returns to the base, takes the proper turn, and keeps right on going. So it must be with a member of a cooperative which has trouble. If he is wise, he will do his part to correct the

mistakes and start again; if he stops, he has lost the value of the experience and will make no progress in any direction.

It is inevitable that with the large number of cooperative organizations which have been established in the last few years that some of them will, because of overenthusiasm and a desire for too much speed, make bad mistakes. Cooperation in itself is not a cure-all for all the difficulties of marketing. If it is not founded and run upon good business principles, it will not help to establish better markets for farm products. On the other hand, the fundamental principle of cooperation is too firmly established to be open to argument. The maple producers are better off together than they are going it alone.

An opportunity is being presented to these producers to reorganize on better principles and especially to establish their market activities upon a sounder financial plan. This plan is being presented to the different members, and we are informed that a large majority of the members are in favor of it. To quote the words of Mr. Robertson: "The situation is a direct challenge to the sincerity and courage of these men"; and we might add that the way in which these members respond to a discouraging situation is a direct test as to the future of the whole cooperative movement.

Team Work

IN NEW YORK, the State Grange, State Federation of Farm Bureaus, State Horticultural Society and the Dairymen's League have worked together for a number of years on common problems in an informal organization known as the New York State Conference Board of Farm Organizations.

At its last meeting a significant step was taken when the New York State Federation of Home Bureaus was invited to become a member of the Conference Board. Much is due to the women for the success of the farmers' private and public business, and it is certainly right, therefore, when the importance of women's influence and work is recognized in asking her organization to join hands with the others for the good of the farm and the farm home.

There is also another conference group in the State, called the Cooperative Council. This is made up of commodity marketing organizations like the Apple Packing Association of Rochester, the Wool Growers', the G. L. F., the State Holstein Association and many other groups that are engaged in helping the farmer to solve his marketing problems. Both the Cooperative Council and the Conference Board hold frequent meetings to discuss measures and take needed action.

At the last meeting of the Conference Board, during Farmers' Week at Cornell, it was voted to ask the chairman and secretary of the Cooperative Council to represent the commodity organizations as voting members of the Conference Board and vice versa, it was suggested that the chairman and secretary of the Conference Board should represent the Board, in meetings of the council as voting members. This action ties up and brings together practically all of the organizations of the State into one great body, mobilizing the tremendous agricultural power of the whole State in one cooperative army to speak and work for the individual and collective interests of practically every person in the State interested in agriculture.

If any one speaks evil of you, live so that none will believe him.

The 67th Congress and the Farmer

A Review of Legislation Efforts to Aid Agriculture to Come Back

By CHARLES W. HOLMAN

THE Sixty-seventh Congress broke all records. It took four sessions, occupying more time than any other Congress in American history. More than 15,000 bills were introduced and several hundred passed.

As one reviews its activities it becomes apparent that farmers had more requests granted than any other group. They won many victories. Their efforts were frequently successful, both in the enactment of legislation and in killing bills antagonistic to their interests.

There were two reasons for this unusual congressional sensitiveness to farm opinion. The economic depression which was in full swing at the beginning of the Harding Administration forced the condition of the farmer upon political leaders. Like the ghost of Banquo, it insisted upon coming into the meeting. As long as the condition of the farmer was unalleviated, Western congressmen from the agricultural districts showed a marked lack of enthusiasm over passing any other type of bills.

The second reason is not hard to find. For several years the influence of farm organizations at the capital has been growing. Farmers have been learning to work together for national legislation. They have followed in the footsteps of organized business which years ago saw the wisdom of establishing offices with competent representatives and information-gathering experts to watch the Congress, lobby for their own measures, lobby against most everything else, and plead with the executive departments in matters involving policies or decisions.

Farmers began this modern method of legislative action when the United States entered the war. In 1917 a group of the old-line farm organizations and some of the commodity cooperatives formed the National Board of Farm Organizations. This agency did much valuable work and has continued as an important force in the life of the capital. A few months later the National Grange created a Washington office, and its representative has been active throughout the years. In 1920 the American Farm Bureau Federation opened a Washington office with a staff that devotes itself to the daily study of farm problems and fights for agricultural legislation. A more radical group, known as the Farmers' National Council, and representing the idea of effusion between farmers and labor, has also been at the capital for many years. Other farm organizations and live-stock associations from time to time maintained offices at the capital.

Several Organizations Represent the Farmer

One might think that the presence of several farm organization representatives would result in a duplication of effort, in conflicts, in needless expense. But the reverse is true in actual practice. The sum total of the farm staffs at Washington numbers less than any of the well-organized industries, like the American Manufacturers' Association, the National Canners' Association, or the American Association of Railway Executives. It requires almost the entire attention of one man to forward the interests of a single bill if he does his job efficiently, and with a number of measures pending that effected the agricultural interest, the Washington repre-

sentatives learned to work together and to coordinate in some measure their efforts to prevent duplication and still take care of all the bills. It was a division of labor, so to speak. And so, instead of confusion and irritation, farmers have benefited from a cumulation of effort.

Strength Not Appreciated at First

When the first farm office was established the congressmen really knew very little about farm organizations, their relative strength, their policies, and particularly the accuracy of their statements. Friendships had to be formed, alliances made. It was also necessary to educate the congressmen to the fact

The 67th Congress

PROBABLY never before in history, certainly not in many years, has agriculture and its problems had the discussion and the consideration in Congress that it received in the session just closed. As Mr. Holman so well points out in the article on this page, consideration of farming came first, because it was needed and second, because the farmers of America are organized as never before to bring their needs to the attention of the Government and the public.

A careful reading of this article will impress one with the large amount of legislation which was passed of vital importance to agriculture. There was for instance the Filled-Milk law, which farm organizations worked so hard and so long for, which will mean millions to the dairyman and much to the health of the general public. There was the credit legislation for farmers passed during closing hours, and again there is the Capper-Volstead Act, putting the seal of Government approval upon cooperative enterprise.

In spite of the great importance of these laws and the many others of almost equal importance, we cannot but again call the attention of our people to the fact that in general, evils cannot be legislated out of existence. Good laws will help and Congress has done about all that it could, but after all the real solution of the farmers' many and difficult problems lies with the farmers themselves.—The Editors.

that farm organizations are evolving a program of legislation based upon a sound national agricultural policy.

In time the combined efforts of farm-organization representatives produced some results. In both Houses were found groups of agriculturally-minded statesmen, but they were a lonely lot. But when they found that the organized farmers stood ready to back their efforts, these men got together into informal organizations which the press promptly dubbed "farm blocs." They were not, however, farm blocs in the sense that the men elected were farmers, for most of them were lawyers and bore to their farmer constituents only a friendly relationship.

These blocs were savagely attacked by the representatives of nonagricultural interests. They were enthusiastically defended by the farm organizations, and the publicity given them tended to cement their members into something resembling solidarity.

But the legislative record would not have been so satisfactory if the farm organizations had depended solely upon the so-called farm blocs for the enactment of certain types of legislation depends upon the utilization of modern methods of publicity and upon a coordination of effort which reaches back to the rural community itself. In other words, a machinery of expression had to be set up in connection with almost every bill. This machinery operated so that senators and representatives heard not only the views of the farm spokesmen, but the wishes of their constituents even from the remoter hamlets of the nation.

When the Harding Administration began its work with the calling of a special session

on March 4, 1921, a few important farm measures had been hanging over for several years and a number of pressing problems faced the legislators. President Wilson had just vetoed the bill reviving the War Finance Corporation, and the Congress had passed it over his veto. He had also vetoed the special Agricultural Emergency Tariff Bill, and passing this bill was one of the first definite acts of the new Congress.

Then followed in rapid succession the following bills:

1. The Packers' and Stockyards Control Act, setting up a special administration to supervise stockyards, meat-packing plants, and live-stock commission firms.

2. The Grain Exchange Control Act, prohibiting tax on certain types of grain speculative trading. This act was promptly contested by the Grain Exchange and a suit through the courts, and they succeeded in getting a part of the act declared unconstitutional. The authors of the act immediately introduced another bill for the purpose of curing the legal defects, and this bill was passed very speedily.

Farmers Authorized to Cooperate

3. The Capper-Volstead Cooperative Act. This act authorized agricultural associations, corporate or otherwise, to form under the laws of their respective States. It placed them under the initial jurisdiction of the Secretary of Agriculture, whose duty it is to hear complaints when cooperators are charged with enhancing prices. Should the secretary find that the evidence justifies complaints, he is authorized to proceed to prosecute under the terms of the Sherman Anti-Trust Act. This law has been declared

the "great charter" of cooperative liberty in America.

4. Two amendments to the Federal Farm Loan Act. While the Farm Loan Act was in litigation Senator Curtis of Kansas introduced a bill which provided for an advance to the Federal Land Banks of \$50,000,000, to be used by them as a revolving fund for loans on land mortgages under the act. The House cut this amount in half and the Senate accepted the amendment. Another bill authorized member banks of the Federal Farm Loan System temporarily to sell their bonds at 5½ per cent instead of 5 per cent, provided these banks did not charge farm loan borrowers an interest rate higher than 6 per cent.

5. The Federal Highway Act. By this law the Federal Government elaborated its policy of assistance to States in the building of good roads. It created a dual system known respectively as interstate and intercounty highways, three-sevenths of the money to be expended is on the interstate system and four-sevenths on the intercounty system. The thought behind the present act is that Federal aid shall automatically continue until 7 per cent of all complete highway projects in each State shall have received Federal aid.

6. Permanent Tariff Bill. Agricultural products received a general and higher protection in the permanent tariff act than ever before in history. Wool and dairy producers benefited especially from the act.

Dairymen Get Bills Through

7. Butter Standards Bill. Congress in its closing days passed a bill defining and establishing standards for butter. This bill

Tomorrow Is Another Day

Let's Forget Spilled Milk and Water Over the Dam

IT has seemed to me of late that we are spending altogether too much energy—and that is equivalent to time and money—in an effort to find out what is the matter with us; or, really, if there is anything at all the matter, and to imploring outside agencies, chiefly legislation and co-operation to bring things up to our ideal of what they should be.

H. E. COOK

The whole thing is nothing more or less than a type of gambling, which, further analyzed, is to get something without patient, steady, unadulterated hard work. Then some one asks me if I am opposed to present-day methods through the above-mentioned channels to help us. Not by any means. God speed the good work, but I am unalterably opposed to leaning upon them and letting up at home. The cold, hard facts are that those who have done their whole duty at home are living as well as, and most of them better than, ever before.

I don't mean to measure the successes and failures in periods of single years, but in half-decades, or, perhaps, in ten years. Few of us are fitted to fairly judge these things. I have days and longer periods when I am sure the trend of farm living in its fullest and broadest sense is going backward. And I can prove it by any number of cases. Then a turn comes in business at home and all seems to be reversed, and I can as surely demonstrate that agriculture is making wonderful strides.

I can see that applied science has taught us how to feed our cattle, and during my memory hollow horn, wolf in the tail, or horn distemper, have gone, and none of the younger generation will know what I am talking about. Wormy and scabby apples were common in that same early day. Now they are not salable for cider. During this same period animal heat and flavor have largely been eliminated from milk. I claim to be one of the original chocolate men, at any rate the froth on the milk pail had every appearance of being covered with something of a chocolate color. To-day we are producing milk so clean that a microscope almost loses its conceit when trying to find bacteria in it, and I have sold cheese in 1879 for one-third as much per pound as this milk brings per quart. In 1878 we hired a man for \$13 a month and his keep, in 1879 he worked for \$14, and in 1888 this same man received the munificent sum of \$15 a month, or \$180 for the year. Now our men average nearly six times as much.

Of course, the supplies are higher, too. But I feel quite sure that most farmers whose memory covers 50 years or more of business life will agree that our best bet for success is during periods of comparatively high-labor costs.

By H. E. COOK

We distribute a portion of our certified milk in nearby villages retailed from a market where customers take it home under their arm. In the manufacturing village of Carthage, 23 babies are at present being fed, and in 10 of these homes the father goes to work each morning with a dinner pail, and he pays 20 cents a quart just the same as the other 13 customers.

Good Wages for the Laborer

It is obvious that I am in favor of good wages for laboring men. I do not think it has any bearing on the case, but it may be interesting to know that four of the ten are Italians. I must confess when I pay bills for repair work from plumbers and iron workers, I have to draw upon a stored-up feeling that we have a proper adjustment. After the bill is paid, however, I realize that they only come occasionally, while I am selling milk 365 days in a year.

I hope we are not losing that old-time pioneer necessity of digging in harder and deeper, each one of us, when times appear to be against us. There is absolutely no other plan that will take the place of hard work. Now, hard work is not alone slaving on things we have done all of our lives. Nor is it necessarily doing a full day's work in the field and doing the chores before and after, which is measurably, and sometimes wholly, responsible for the exit of pretty nearly every laboring man from rural sections. Especially this is true where there is a family to care for.

Wasted Energy

THERE is a story of a man who started in the morning for his place of business feeling well and full of enthusiasm. Previously, several of his friends had agreed to try a practical joke on him. So, on this morning they met him, one by one and each made some different but plausible remark to the effect that he was not looking well or asking him if he was ill or telling him that he ought to be home in bed. The first remark of this kind dampened the man's enthusiasm a little; the second made him begin to wonder if he were really well and by the time his fifth friend had remarked on his ill health, he concluded that he was a sick man, returned home and went to bed.

Mr. Cook's article reminds us of this somewhat exaggerated story. More and more folks are coming to realize that mental attitude makes considerable difference with one's health and with one's business. Of course farmers have had and are having hard times. There is no doubt about it, but as Mr. Cook so well points out, there has been considerable energy wasted by farmers themselves and by their would-be friends trying to tell us how sick the farm business is or trying to get help from outside agencies. It seems sometimes that so much of this talk has a tendency to further discourage us and to make us look too much for help from the outside which will never come.—The Editors.

sort. I expect a good deal of the hard times in the West have come out of the high prices paid for farm lands. When land has a market value of from \$400 to \$600 an acre and actual sales are made at these prices, the impression goes out at once that boom times have come. These prices were nothing more or less than gambling to such an extent that when the bubble burst it would become a crisis for a good many people. If farmers expect prices of crops to be adjusted on these values, I am afraid they will be disappointed.

The great producing areas of the world are too large to permit, unless it be for crops for nearby city markets. New York has felt humbled, agriculturally speaking, because our farming lands had only a mild form of speculative advance. But now, when the squeeze is on, we feel thankful that we jagged along about as of yore. Every business has had about the same expe-

rience, and the only way out is to charge off the loss and begin over.

I received a letter recently from a Canton, N. Y., man who ships horses from Dakota and written from there. He says: "Conditions, I think, are a little better than last year. Can't say as prices are any better, or any more money in circulation, but they are getting used to closer times." What I am saying in no way disguises the fact that farm products prices, especially cereals, were officially kept down at the outset of the war, while many other products were allowed at a cost-plus plan. All that sort of trouble has gone, and the spilled-milk philosophy applies. Now we must charge up our losses, quit finding fault, go to work, back up our great national organizations and begin to dig into better farming and dairying than ever before, and we will soon pay up our losses as the French did the war indemnity following the Franco-Prussian war.

Maple Sirup Organization "Coming Back"

(Continued from page 238)

Therefore, in order to avoid inoculation of the sap during the latter part of the season, remedial measures in the way of sanitation are necessary if the quality of the sirup is to excel in all respects.

Sanitation as Essential as with Milk

The same methods of sanitation apply in the production of maple sirup as in the production of pure milk. All utensils used must be kept clean and free from dirt or other harboring places for bacteria. Metal buckets and gathering and storage tanks are superior to wooden ones. The development of bacteria can be checked by frequent collections of sap and immediate concentration by boiling.

Covered buckets keep out rain and snow, which may carry impurities from the air or from the branches and trunks of the trees. They also prevent broken twigs and bits of bark from falling into the sap, discoloring it and introducing bacteria which may be adhering to them. Bacteria may accumulate in considerable numbers in the tap hole, and the rimming out of the holes as the season advances may remove a great deal of contamination from this source.

Retapping in the Later Season

Another method of eliminating damage from this source is to retap the tree toward the latter part of the season. This gives a fresh run of sap free from bacteria, and if the spouts and buckets are cleansed at the same time, and the sap collected frequently and boiled immediately, may yield a product of quality equal to the sirup from the earlier runs of the season.

Sap which must be held in storage before boiling should be kept as cool as possible to prevent the increase of bacteria. For this reason the storage tanks should be outside the sugar house.

The observation of the above suggestions should not materially increase the cost of producing maple sirup, and, on the other hand, should prove of value to the maple-sugar industry by helping to maintain a marketable product of high standard quality.—BENSON H. PAUL.

Renting Systems Changing

An interesting development coming from the hard times which farmers in the Central West are having, is the change from a cash rent to a share basis that is taking place in operating farms. A recent survey made by the United States Department of Agriculture in Indiana shows that in one county 87 farmers were reported as renting for cash in 1920, but that this method of renting has practically disappeared since that time. In another county where there were 340 cash rented farms, more than half of them have changed to a share basis. Many farmers who contracted to pay large rents in 1920 and 1921 have lost everything. Cash rents ranging from \$7 to \$12 an acre in 1919, have been reduced \$7 to \$10 an acre. The landowners have suffered too, for after the tax and repair bills were paid there was not much left.

I never was more pleased with your paper than now.—Charles D. Rhodes, Hempstead, N. Y.

McCormick-Deering 15-30

A Three-Plow Tractor With Ball and Roller Bearings at 29 Points

In developing the McCormick-Deering 15-30, the Harvester Company has produced a tractor which gives maximum service and economy in operation. The features in design of this tractor are the result of field experience gained through 18 years of contact with tractor farming conditions. Ball and roller bearings have been used at the points of high speed or extreme strain, and all other parts have received the same consideration. The resultant smooth-running, modern tractor

meets the many power requirements of the present-day farm.

Practical design, ease of operation and handling, make the McCormick-Deering tractor an ideal three-plow power unit. It also develops a surplus of power to handle a great variety of belt jobs (threshing, silo filling, husking and shredding, feed grinding, etc.) and its smooth, flexible operation and increased speed make it a leader for all kinds of draw-bar work.

You will want to know more about this latest McCormick-Deering tractor. Ask the McCormick-Deering dealer for complete details or write for our new catalog.

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

The Technique of Plowing

And Spring Management of Early Vegetable Plants

THE management of
tillage operations

By **PAUL WORK**

presents delicate questions on any
farm. On the vegetable farm, the
stakes are larger and the effects of
small errors are recorded in time of
maturity and in quality as well as in

PAUL WORK

yield. The grower who seeks to
serve the early markets is oft-
times tempted to plow too soon at
the risk of bad physical condi-
tion which may take a season or
more to correct. Especially is this
true of the heavier soils. On the
other hand, delayed plowing, on
light as well as heavy soils, means
wasted moisture

and a less favorable opportunity for
the decay of green material or refuse
that may be turned under.
The technique of plowing means
much in vegetable production. A few
furrows badly turned will leave roots
and other plant remains near the sur-
face to trouble the cultivator through-
out the season, and, in addition, weed

seeds are close to
the surface and
ready for up-
hindered germi-
nation and vig-
orous growth.

Some of the
problems of
spring plowing
are solved by
doing the work
in the fall. For
early crops this
is especially de-
sirable, as green
material has
ample time for
decay, and there
need be no de-
lay in making
final prepara-
tion for plant-
ing. Fall plow-
ing also leaves
the soil in good
shape to take in
the water of
rains and melt-
ing snows. It
exposes the soil
to frost action,
disturbs many
an insect when he has just settled for
his winter nap, and it also helps in
adjusting the year's distribution of
labor.

Plows—beam, sulky, side-hill, disk
and one-horse; harrows—disk, spring-
tooth, spike-tooth, acme and meeker;
roller; plank-drag; clod-crusher; these
and more are to be found in implement
warehouses to tempt the buyer. Once
bought, the chosen ones stand in the
implement shed (we hope they do),
each raising the question as to which
shall be used for each tillage job. One
is foolish to buy all, and the selection
of a list must depend upon the soil, the
crops, the type of farming and the
man. Possibly as universal a combina-
tion as any would consist of plow,
spring-tooth, spike-tooth and plank-
drag, the latter home-made. The disk
harrow and the meeker are likely to be
early additions to the list. The former
is especially useful on fall-plowed land
and when land is to be prepared for a
second crop. It also finds usefulness
when green material or refuse, such as
corn stubble and asparagus tops, are
to be chopped up preparatory to turn-
ing under. The meeker is a wonder
when it comes to preparing a fine,
smooth, level seed-bed for small crops
to be sowed with the garden drill.

Hardening Early Plants

Early cabbage plants are set in the
field about as soon as the ground can
be gotten ready in the cooler parts
of the middle Atlantic States. This
means April 5 to 15 during most sea-
sons. As one approaches the coast or
goes south, the time is earlier. When

plants are put out thus
early, they must with-
stand severe frost and even freezing
weather, and they must undergo occa-
sional bad storms which whip the plants
about in anything but kindly fashion.
Nevertheless, a well-grown cabbage
plant will withstand these conditions
and will make immediate recovery and
rapid growth as soon as the weather
improves. This means that the plants
must be well hardened.

Hardening is accomplished by care-
ful control of the conditions from the
time of the first transplanting, perhaps
four or five weeks before the time of
field setting. It is well, even while the
seedlings are developing, to have the
greenhouse cool and to water sparingly.
Then they stand the shift well and can
be placed in cold frames immediately
after pricking out, thus releasing green-
house space for the starting of toma-
toes or other plants. Once in the cold
frame, the process of hardening in-
volves a gradual decrease in water
supply and temperature and a gradual
increase in ventilation. A week or 10
days before field setting, sash should
be left off all night unless a very severe
freeze is threatened.

No set of directions can tell a man
how to harden plants. The details must
be gained through experience. Cab-
bage is a good plant to practice on, as
it is naturally quite hardy. There need
be little difficulty in holding the
plants in the frame for 10
days after the
earliest prob-
able setting
date, provided
they have been
kept short and
stocky.

Good plowing is important. A few poorly-
turned furrows will make trouble for the
cultivator all season

Hardening of
tomato plants
is fully as im-
portant as the
hardening of
cabbage plants.
While tomatoes
are not expect-
ed to withstand
frost, they must
frequently face
severe storms
and cool nights.
If not properly
hardened, they
are checked in
growth so that
they recover
slowly and maturity is gravely delayed.
Also, if they are overhardened, they
will be slow in "getting away." The
task is somewhat more delicate with
the tomato than with cabbage, but the
principles are much the same.

Sowing Field Beans

Dr. E. V. Hardenburg at Cornell
Farmers' Week recommended shallow
planting for beans. "Come-up" is one
of the great limiting factors. Shallow
planting makes for quick results. Also,
seed corn maggot is worst when seed
is planted deep in heavy soil in a cool,
wet season. These are all factors that
make for slow come-up.

Another point was in favor of heavier
sowing of pea beans. Experiments give
heaviest yield at six pecks, but this is
too costly for economy. Usual practice
is about three pecks and four pecks is
recommended. Kidney beans do not
seem to respond so well to heavier
sowing.

Treat the seed oats for smut.

Corrosive Sublimate

applied with my maggot gun or watering can is the quickest
and most efficient way to fight maggots on the roots of
cabbage, radishes and other plants; pays for itself in a
few hours; been tried and made good; directions given.

Can You Afford to Buy Fertilizer on Credit?

BY W. I. MEYERS

IN an effort to reduce the amount of credit business, fertilizer companies are offering more liberal discounts for cash this year than ever before. This offers the business farmer an unusual opportunity to reduce the cost of his fertilizer. The base price for fertilizer this year is for payment October 1. From this base price a discount of 5 per cent is allowed for payment July 1. If payment is made before July 1, an additional one-half per cent discount is given for each month before July 1 that payment is made.

If cash is paid for fertilizer with order or at time of delivery (sight draft), an extra discount of 2 per cent is allowed, in addition to the other discounts. If you buy fertilizer for delivery between March 15 and April 1, the discounts for cash would be as follows:

	Per cent
Discounts for payment on or before July 1.....	5
Additional discount of one-half per cent per month if payment is made April 1 (3 months).....	1½
Extra discount of 2 per cent for cash with order or on delivery 2	
Total discount for cash payment on or before April 1.....	8½

This 8½ per cent discount is given for paying six months ahead of the credit payment date, October 1, and therefore is at the rate of 17 per cent per year. Looking at it the other way, the man who buys fertilizer on credit is paying at the rate of 17 per cent per year for his credit. Can you afford to do it?

Good Credit Standing an Asset

The fact that money is scarce at this time of year need not prevent anyone from paying cash for his fertilizer if he has good credit standing at his bank and is able to borrow the money there. If the money is borrowed at the bank, the interest cost for six months would be 3 per cent, leaving a discount of 5½ per cent above interest. The cash discounts for other times of delivery are proportional and can easily be determined. For fertilizer to be delivered after April 1, but before May 1, the cash discount would be 8 per cent, and for delivery after May 1, but before June 1, 7½ per cent. These discounts are for less than six months, and the rate per year is therefore even higher than 17 per cent.

The fertilizer companies cannot be criticized justly for charging high rates for credit. The business of the fertilizer company is to sell fertilizer, and it can do that efficiently. It is not the business of the fertilizer company to extend credit to thousands of farmers scattered over several states.

The Best Place to Get Money

The best and cheapest place to borrow money is usually at the local bank. The banker, who has personal knowledge of farmers in the surrounding region, can lend them money with less loss and at less cost than any outside commercial organization. It is doubtless good business for the fertilizer companies to offer generous discounts for cash. It is certainly good business for the business farmer to accept them and to borrow at the local bank, if necessary, in order to do so.

New York farmers spent \$15,000,000 for fertilizers in 1919. With lower prices, they will doubtless spend at least \$10,000,000 for plant food in 1923. If every farmer paid cash for his fertilizer, the saving above bank interest would be about 5 per cent on this amount, or \$500,000. Arrange to pay cash on delivery for your fertilizer and save your share of this amount.

I have been a reader of your paper for 30 years and like it very much. I think it is the leading all-round farm paper. I make it a point to read it all through. I particularly admire Dean Cook's and also Van Wagenen's articles, and think Editor Eastman has been a great help to the old reliable American Agriculturist. I have faith that you will do all in your power to help us poor farmers.—G. H. Swaze, Otselic, N. Y.

AMERICAN AGRICULTURIST

461 FOURTH AVE., NEW YORK CITY

Every Poultry Raiser wants these 4 Results

—now you can get them!

Higher fertility and stronger germs—larger hatches with fewer chicks dying in the shell—greater vitality—quicker gains. These are the four things you want in your flock. And now a remarkable new development in feeding is making them possible.

Increases fertility

The fertility of eggs depends on the potency and activity of the parent birds. The vital elements contained in yeast have a direct influence on the reproductive organs of fowl. Feed Fleischmann's Pure Dry Yeast to your hens and cockerels and you will have more fertile eggs in your incubators.

Increases hatchability

Hatchability is possible only to strong embryo chicks. If they have inherited the strength of a yeast-fed hen, they will break through and there will be less dying in the shell.

Increases vitality

Greater vitality and less loss are found in the young chicks fed early on a mash containing Fleischmann's Pure Dry Yeast. Leg weakness and white diarrhea are prevented.

Increases rate of growth

Growth—normal and better than normal—is the result of feeding yeast. Two-pound broilers in 2 months when Fleischmann's Pure Dry Yeast is added to the mash.

Fleischmann's Pure Dry Yeast comes in 2½ pound cans, containing 117 tablespoonfuls, or enough to last 10 hens or 50 chicks for 4 months. With each can is a booklet of complete instructions for the care and feeding of chicks and mature birds. Mail the coupon today for a big 2½ pound can by prepaid parcel post.

Costs less than 2c a tablespoonful. 117 tablespoonfuls to the can—enough to last 10 hens or 50 chicks for 4 months.

The Fleischmann Company
Dept. D-13
701 Washington St., New York City

Committee Studies TB Work—News from Albany

THE New York State Farm Bureau Federation recently appointed a committee composed of H. E. Babcock, E. R. Zimmer, M. E. Buckley and L. A. Toan to make a thorough study of the tuberculosis eradication work that is being done in New York State, and to make recommendations as to what the State policy covering this work should be. J. Coryell is secretary of the committee. At its first meeting the following resolution was passed:

WHEREAS, The failure of the State of New York to provide for the prompt payment of indemnities on condemned cattle is requiring the expenditure by the State of a large amount of money for interest, and is causing financial embarrassment to cattle owners; therefore; be it

Resolved, That it is the sense of this committee that all appropriations should be made by the Legislature of the State of New York to cover indemnities incurred to date; and further be it

Resolved, That it is our opinion that an adequate appropriation should be made to finance future work.

FARM NEWS FROM ALBANY

Bills have been introduced in the Legislature to require an examination for licensing horse-shoeing. The examination fee and license would cost \$5. To be eligible for this examination, one would have to be an apprentice in the trade for three years.

Assemblyman Kahon has introduced a bill which would require every auto owner to have an automatic governor, approved by the State Tax Commission, on his car which would prevent a speed of more than 30 miles an hour.

The Lockwood House bills are causing much discussion. They are very sweeping and broad in their powers regarding labor unions and business in general. If passed, they would create a trade commission to regulate business, prohibiting stock and mutual companies from taking compensation, and provide for prevention of fraud in the distribution of securities. They also provide for licensing stock and bond dealers, limiting investments of fire insurance companies, and provide that these companies dispose of certain securities which they now hold. Cooperative leaders of the State are giving considerable attention to certain features of the Lockwood bills which would, in their opinion, if passed, restrict the work of farmers' organizations.

A bill before the Legislature would restore the printing of the Session Laws in county papers. A previous law providing for such printing was repealed in 1921.

Assemblyman C. P. Miller introduced a resolution to investigate the wages, hours and working conditions of women and children, committee to submit report to succeeding session. An investigation of this kind seemed necessary after the apparent division among the women themselves as to what they would recommend at this time for their own welfare.

Chairman McGinnies of the Assembly Ways and Means Committee introduced in the Legislature to-day a bill appropriating \$150,000 for the use of the Conservation Commission in combating the gypsy moth. It was explained that the insect pest had worked much harm in New England, and that it was desirable to prevent it getting a foothold in New York.

LEAGUE CANCELLATIONS TOTAL 10,768

The Dairymen's League Co-Operative Association reports a total cancellation of 10,768 contracts. Of this number of producers who served notice of withdrawal on their Association, 5,000 were selling milk in Classes 1 and 2, and 4,000 in Classes 3 and 4. The balance were producers whose contracts

with their association were inactive because they were no longer producing or lived in localities where it was impossible for the league to pool their milk.

The organization reports that of the 5,000 producers in Classes 1 and 2 who withdrew, there were a considerable number who had already violated their contracts and were selling to other dealers. Except in a few places the association's own plants were not effected much by the cancellations. There were very few withdrawals from the more important plants owned by the organization.

The cancellation was especially large in the so-called "cheese territory." The total cancellation in Lewis and Jefferson, where there are many cheese factories, were 1,096 and there was 957 withdrawals in St. Lawrence County.

A Doctor of the Old School

(Continued from page 239)

of night. I will wash and dress the baby, which he did with all tenderness, then cared for the mother, made her comfortable, and went his way.

And there was the poor Polish woman who came running begging him: "Queeck, queeck, my baby die!" When Dr. Brown got there he found the child in a bad way indeed, having fallen and cut himself about the head so badly he needed the care of a surgeon; so, hurrying the child with its father and mother into a car, Dr. Brown took them to the hospital. On arriving he called the Polish doctor, and they attended to the baby, but the child had lost so much blood they saw he was not going to come out from under the anesthetic. The Polish doctor said: "Well, it's no use; only transfusion will save him, and you can't get any blood." "I can't!" said Dr. Brown. "You see." And, going to the room where the father and mother sat, he explained quickly to them and said: "Unless you give some of your blood at once to your child, he will die."

Although she understood but little English, the Polish mother rose to her feet and with the mother love of all true mothers shining in her eyes, said: "I go, I give." What a text for a sermon! What a sermon in itself! She may have thought it was her life they wanted. She lay beside her boy and gave him of her life blood. After a short time color began to come back into the child's face; then his eyes opened and he said: "Mum, mum!" That was reward enough for Dr. Brown.

I know of more doctors like Dr. Brown, but fail to see younger doctors coming on to take their places, and so for what these old country doctors have done and are doing yet for us country folks, I write this and say with George Turner:

"If with pleasure you are viewing any work a man is doing,
If you like or if you love him, tell him now;
Don't withhold your approbation 'til the parson makes oration
As he lies with snowy lilies o'er his brow;
For, no matter how you shout it, he won't really care about it;
He won't know how many teardrops you have shed;
If you think some praise is due him, now's the time to slip it to him,
For he cannot read his tombstone when he's dead.

"More than fame and more than money is the commend kind and sunny,
And the hearty, warm approval of a friend;
For it gives to life a savor, and it makes you stronger, braver,
And it gives you heart and spirit to the end.
If he earns your praise, bestow it;
If you like him, let him know it;
Let the words of true encouragement be said;
Do not wait 'till life is over and he's underneath the clover,
For he cannot read his tombstone when he's dead."

Sciences Discovery Routs Chicken Lice

Mineralized Water Gets Rid of Dusting or Spraying—Birds Delouse Themselves. Fine for Baby Chicks and All Poultry.

A recent discovery promises to revolutionize all the commonly accepted methods for keeping poultry free from lice and mites. This wonderful product keeps the poultry always lice-free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Hick's Lice-Go, which is the name of this remarkable lice remedy, is dropped in the chicken's drinking water. Taken into the system of the bird, it comes out through the oil glands of the skin and every louse or mite leaves the body. It is guaranteed to help the hatchability of the eggs and cannot injure the flavor of the eggs or meat; is harmless to chicks and does not affect the plumage. A few days' treatment at the start and then a little added to the drinking water each month is all that is necessary.

Send No Money—just your name and address to Chas. M. Hick & Company, Dept. 442, 1018 So. Wabash Ave., Chicago, Ill. A card will do. Mr. Hick is so confident that Hick's Lice-Go will get rid of every louse or mite that he will send you two large double strength \$1.00 packages for the price of one. When they arrive, pay postman only \$1.00 and postage. Sell one to your neighbor and get yours free. If you are not absolutely satisfied after 30 days' trial, your money will be refunded. This offer is guaranteed by two big Chicago banks, who say that Mr. Hick will do exactly as he agrees without question or argument. Write today before this remarkable trial offer is withdrawn.

Water Is Cheap Feed!

Milk is 87% water, two-thirds of which must be taken into the cow's system as water. No matter how much high-priced feed you give your cows, they cannot produce their maximum flow of milk on only two drinks of water a day—especially when turned out in winter weather to a tank of ice-cold water. A constant supply of fresh water, tempered, always before the cow, means more milk in the pail—more profit for you. Many dairymen have increased their milk yield from 25% to 40% by the installation of

LOUDEN Detachable Water Bowls

Not only increase the milk yield, but save all the time of watering the herd. Quickly detached and cleaned. Have the famous strainer-in-the-valve feature—will not overflow and flood the barn. Valve seat, valve stem and strainer are brass—proof against rusting, sticking and trouble which insure long years of satisfactory service. Water cannot flow from one bowl to another—prevents spreading of disease through water. Easily installed in any barn with any kind of stalls. You can do the work yourself.

Get These Two Helpful Books

224-Page Loudon Catalog. Describes Loudon Water Bowls and 100 other labor-savers for the barn that will save half the time and labor of doing chores and barn work. Many Farm Sales in New Jersey

W. H. BULLOCK

FARM sales have been the order of the day in the last few weeks throughout New Jersey, and the height of the season for spring disposal of farm property, live stock and equipment is at hand. Considerable interest has been shown in the sale of horses at these sales, and teams have been sold all the way from \$135 to \$375 per pair, the latter figure being high at the sales and only for sound animals well broken into the work. A number of cars of horses from Illinois and other parts of the Middle West have recently been received at several points in New Jersey, local dealers selling them to their regular customers.

At some of the public sales, good grade cows have sold at \$90 to \$95 apiece, a few high producing animals occasionally going as high as \$175. Hay has been sold at the farm at \$15 to \$22 per ton, while good timothy offered through dealers at local points in the southern part of the State, has brought around \$25.

Scarcity of Farm Labor

Farm labor is reported scarce through many sections of the State. At such points as Allentown and Hightstown, N. J., buses full of laboring men go daily into such towns as Trenton and New Brunswick, the same men previously being available for farm work. A large grower in the vicinity of Allentown said that 30 men daily commute to the city for work, whereas 25 of these same men previously were available for work on the farms in his vicinity.

Fruit Buds Reported Healthy

The consistent cold weather of February and March was favorable for the protection of peach buds generally throughout New Jersey, despite a temporary rise of temperature during the first few days of March. The cold weather and snow have maintained the trees in a dormant state and have prevented too rapid development of the buds. Although too early in the season to give a definite estimate on the condition of peach buds throughout the State, scattering reports now available indicate a healthy condition and the promise for a good bloom, all other conditions being equal between now and May. Orchardists also report that the cold weather has been effective in controlling some of the orchard pests. It has also made wild deer more bold in Atlantic, Ocean and Cumberland counties, bringing the animals nearer to the farm houses, with considerable damage reported to young trees.

The county agents of Southeastern New Jersey, in conjunction with the State Experiment Station and the New Jersey State Bureau of Markets, recently conferred for the purpose of urging more attention to the standardization of sweet potatoes. It was felt that the U. S. grades should be adopted and that the growers should acquaint consumers with the merits of such standardization so that sweet potatoes might be more generally consumed next year and at a price nearer to the cost of production. The growers are asking New Jersey consumers to order definitely according to grade. The grades selected are: N. J. U. S. Fancy No. 1, No. 2, and Jumbo. The No. 1, which is the general commercial pack, runs 1 1/4 to 3 inches in diameter with a length between 4 and 8 inches. However, the length may be less than 4 inches if the diameter is 2 inches or more. To qualify for the grade, the sweet potatoes must be sound and practically free from dirt, disease and other injury.

Notes from the Counties

Hunterdon Co.—At the recent meeting of the Flemington Fair Association, the fair dates for next summer were set as August 21 to 25. Officers for the coming year are: E. B. Allen, President; F. R. Williamson, Vice President; A. S. Case, Treasurer; Dr. C. S. Harris, Secretary, Horace P. Murphy, Race Secretary. The Flemington Fair is annually one of the best racing classics among the smaller associations. The general fair attractions are also splendid and plans are being made for an even better event this coming season.

HARDER SILO

Don't Hatch Too Early

Avoid Early Moulting Troubles

DO not make the mistake of incubating your eggs too early. I have had chickens that were taken off the nest the last of February that moulted just as the old hens did, and many other persons have told me that they had the same thing happen to their pullets that were hatched very early.

This moulting of the pullets is especially undesirable and unprofitable. A pullet that moults is immature and will be permanently stunted. She is in a weak physical state, and is open to attacks of cold and other poultry ills. This was especially true last fall. I saw some flocks of moulting pullets that fell an easy prey to the chicken-pox which was prevalent throughout the entire State of Pennsylvania. Other pullets that were hatched in May did not moult and were healthy and started laying by Thanksgiving. Every chicken owner expects to realize profit on his investment. Few of us can afford to be in the business for pleasure only. Therefore, if we keep chickens for eggs, we must study and observe our flocks and be ready to profit from our observations.

Lay When Eggs are Scarce

Pullets that start to lay in November, when eggs are high and scarce, will pay. If they start to lay earlier, they may moult, and in all probability will not have their new feathers and be in shape until eggs are beginning to drop in price, which is during February. If chicks are hatched too late, they likewise will not start to lay until toward spring, when eggs are dropping.

For the latitude of Philadelphia, Leghorn chicks for laying need not be hatched until about the first of May. Heavier breeds, such as the Rhode Island Reds and Rocks, can be hatched about one month earlier and Brahmas still earlier. These chicks will start to lay in fall, and will keep on laying all winter when eggs are highest and they are not going to moult.

Of course, if the chicks are to be sold as spring chickens or broilers and roasters, then the earlier they can be hatched the better. Early spring chickens fetch double what those fetch that are not ready until five weeks later. The law of supply and demand governs the price of spring chickens, and very early in the year the supply is light and prices high.

By R. D. WEIGLEY

chines provide for giving more ventilation when keeping the machines in rooms well and evenly heated like furnace-heated living rooms.

One of the best means of securing a suitable atmosphere is to open up all doors and windows possible for a short time every day. This will change the air in the room entirely and will equalize the moisture content. Usually the outside air will be about right for the incubators as they are made to operate. If they are kept in caves or cellars good air must be assured, and it is best to have some heat in the room that will keep the temperature even and not so low as to require forcing the incubator.

TURKEY EGGS IN SMALL INCUBATOR

Is it advisable to set 100 turkey eggs in an incubator? What should be the temperature? Would it be better to set the turkey eggs under hens?—D. W. Blaisdell, New York.

Some farmers use incubators quite satisfactorily, and large incubators are employed on commercial plants where turkeys are raised on a large scale. On the farm, however, the general custom is to use turkey hens and chicken hens. Since the turkey eggs are larger than hens' eggs, the approximate turkey-egg capacity of the incubator is three-fourths that of the chicken-egg capacity. The incubation period of turkey eggs is 28 days, the first egg in the incubator usually being pipped on the 27th day, and in some cases all of the poults are not hatched until the 29th day.

The temperature for turkey eggs during incubation are approximately the same as for hens' eggs, and the machines should be run at the temperature recommended by the manufacturer of that make of machine. The hatch is brought off in the same way as when handling chicks. Unless the incubator is supplied with moisture pans or some other arrangement, the eggs must be moistened during incubation. They are aired and turned, as is the case with hens' eggs. The turkey eggs are tested for fertility and dead germs on the 10th and 20th days.

Although an incubator would be much the easier practice, with as many as 100 eggs hens could be used. A long row of nests could be constructed on the ground, separated by partitions. The hens of the general purpose breeds will not satisfactorily cover more than eight or ten eggs, while the mother turkey hen will cover 15 to 18, and in some cases a few more. The chicken hens are handled in the same way as when incubating their own eggs, while the mother turkey must be watched, as she is a persistent sitter and may remain so long on the nest without water and food that she may die.

RAISING POULTS IN BROODER

Will you kindly tell me how to raise turkeys hatched in an incubator? What kind of house should they be kept in? What food do they require and at what age should they be allowed to run at large?—Mrs. J. H. Girts, Chautauqua County, N. Y.

Rearing turkey poults is about the same as handling baby chicks when hatched and brooded artificially. I judge from your letter that you contemplate brooding artificially. Some folks experience considerable difficulty in getting young turkeys to eat as they seem to go about with their heads up in the air. It has often been found a good plan to put a baby chick or two with the

Raise all the Chicks You Hatch

Raise them the PAN-A-CE-A way.

Start them right—keep them growing right along without any backset.

PAN-A-CE-A gives chicks good appetite and good digestion—helps them develop rapidly—gives them vigor to resist disease.

PAN-A-CE-A prevents fermentation of the food; fermentation is where most of the bowel troubles start.

PAN-A-CE-A is a gentle tonic to all the little-chick organs—keeps the system in order.

PAN-A-CE-A contains the Salts of Iron, so essential to early chick life, and during the rapid growth of feathers.

PAN-A-CE-A prevents and cures gapes, indigestion, diarrhea and leg weakness.

PAN-A-CE-A your chicks and then watch them feather! A Pan-a-ce-a chick will out-feather a non-Pan-a-ce-a chick every time.

Tell your dealer how many hens you have. There's a right-size package for every flock. 100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail 500 hens, the 100-lb. drum For fewer hens, there is a smaller package.

poults as they serve, by example, to teach the turkeys where to find the food.

Where artificial methods are employed there is too often over-eagerness on the part of the turkey raiser to get the poults to eat too early. They should not have anything until they are two days old. At first turkeys are fed four times a day, being started on a moist mixture of equal parts of chick grain and chick mash, in which there has been mixed a considerable quantity of finely chopped green food. After a few weeks the feedings are reduced to three times a day. At about five weeks of age grain is fed morning and night with a feeding of moist mash, and finely cut green food. Buttermilk is considered by successful poultry raisers as a most essential part of the ration, supplying all of this material the birds will drink. Naturally a good range where the birds will be able to catch grasshoppers and other insects as well as procure a supply of green food is a great asset. However, care must be taken that they do not range far and become lost.

The general management of poults in the brooder is the same as that for baby chicks. A hover large enough for fifty chicks will accommodate twenty-five poults. In some cases hovers are not quite high enough for the young turkeys, with the result that they are inclined to develop leg weakness due to the fact that their backs are too close to the source of heat. The common coal stove brooders with hovers which may be raised are adapted to raising turkey poults artificially to very good advantage. The temperature at first should be at least 90 degrees. It is gradually reduced so that in three weeks' time the temperature is down to 70 degrees. As a rule, poults 6 or 8 weeks old need no artificial heat.

HATCH GOOSE EGGS IN INCUBATOR

I am a subscriber to your valuable paper. I wish to know where I can get some geese eggs hatched this spring. I lost 97 eggs last spring by having to hold them too long before having a setting hen or goose available to hatch them. Can they be hatched in an incubator?—T. W., New York.

Goose eggs can be successfully hatched in an incubator in substantially the same way as hens' eggs. The period of incubation is from 28 to 32 days, with an average of close to 30 days, whereas the ordinary hen's egg requires an even three weeks. (This means a little more skill in the handling of the incubator, so that the temperature conditions are maintained for the full period of four weeks. The temperatures are gradually increased each week, so that the hatch is brought off at 102 to 103 degrees. Attention must be given also to the supplying of moisture. This is particularly important, as the period of incubation is longer than with hens' eggs.

If you do not have an incubator, it would hardly pay you to buy one for your goose eggs alone. Why not go to one of your neighbors who has an incubator and make a business arrangement for the incubating of your goose eggs on a custom-hatching basis? The fair charge in this case would be for you to pay him 5c for each egg put into his incubator and 5c additional for each gosling which hatches and lives for a period of 24 hours. In return for this charge, the man who runs the incubator is to give his best attention. He is paid for his trouble and the cost of operating the machine and the 5c for each gosling which he hatches successfully is an additional bonus to induce him to give his best efforts and attention to the operation of the machine.

If you have no immediate neighbor, a small advertisement in the local weekly newspaper should bring you in touch with someone within reasonable distance of your home.

Caring For the Winter Layers.—As the birds have been accustomed to open air conditions, it is necessary that proper ventilation be given. Care should be taken to keep the front of the house open. Green feed should be in no way restricted. It is of great importance at any time of the year, but during the winter period it is absolutely necessary.

Thousands of De Laval Separator Users Have Received 20 to 30 Years of Efficient Service.

As a result of the Oldest De Laval Separator contest in which it was announced \$25 would be given to the owner of the oldest De Laval in each state, thousands of letters have been received, which prove beyond all question of doubt that 20 to 30 years of satisfactory service from a De Laval Separator is not unusual, and with reasonable care, to be expected.

\$25 for the Oldest De Laval

This contest will be open until April 7th and other users of Old De Laval who have not entered the contest, still have time to do so. Simply write us, giving the date of purchase, length of service, serial number, and a statement concerning its service. Even though your De Laval may not be as old as some mentioned here, enter it anyway, as it must be kept in mind that this contest covers every state; and in some sections separators have not been used so long as in others. Winners will be announced May 1st.

Following are a few of the many letters from old De Laval users, which are typical:

30 Years

"Our De Laval Separator was purchased July 12th, 1893. It has taken care of all the milk produced on this farm from 1893 until November, 1917, and we were milking over 30 cows at times. Since November, 1917, I have shipped the whole milk. The last time I tested the skim-milk it showed 2/100 of 1% fat."—Henry Petersen.

Send for free book "Molasses a Feed"

More Milk

Molasses adds materially to the palatability of the ration fed to dairy cows. And that means the cows enjoy their food more—get more nourishment out of it—and that results naturally in more milk. And for horses, hogs and sheep molasses is just as palatable, just as valuable. The price of good molasses is very low now.

29 Years

"I have a De Laval Separator bought in May or June, 1894, which has been run twice each day ever since, but one day. It has many a day separated 2,000 lbs. of milk and is still in first-class condition."—Fred G. Palmer.

20 Years

"We have a De Laval Separator that we bought in the fall of 1903. It has been used twice a day nearly every day, separating on an average of 83,579 lbs. of milk per year, and is still in good repair and doing its work well. The last time that the skim-milk was tested by the testing association it was skimming to 1/100 of 1% fat. If this separator ever wears out we shall want another De Laval."—A. B. and J. M. Bicknell.

22 Years

"I purchased my De Laval on December 21, 1901, and it is still in very good working condition. My neighbor has worn out two other makes already and has the third. Mine still skims cleaner than his and I hope to use it about ten years yet. It is not to be worn out."—George P. Leibold.

25 Years

"My De Laval Separator was bought in the spring of 1898. We have used no other. This summer we had our skim-milk tested at the creamery and it tested 2/100 of 1%. It will be good for years yet."—Mrs. Tena Larson.

24 Years

"My De Laval Separator was purchased in 1899 and has been in service every year. This machine has separated about 18,000 gallons of milk annually. It has given me excellent service and skims cold milk perfectly. My sister purchased a new De Laval last spring and has saved nearly enough to buy a good milch cow."—Emil S. Shubert.

Four to Five Times' More Use

Evidence such as this from thousands of users proves that a De Laval will last from four to five times as long as the average separator, and do better work all the time. It proves conclusively that the De Laval is the best and cheapest separator. The De Laval you buy today is the best cream separator ever built. With reasonable care it will last you a lifetime, and will pay for itself within a year. Sold on easy terms. See your De Laval agent or write us for full information.

GLOBE Silo

cheapest per ton capacity

MORE silage can be stored in a GLOBE Silo with the patented GLOBE extension roof, per diameter and height, than any other similar size silo. Adjustable door-frames and patent locking doors that prevent spoilage, door fasteners that become rungs of the ladder, adjustable hoops that correct swelling or shrinking, are exclusive features only found in GLOBE Silo.

Only carefully inspected Canadian spruce and Oregon fir are used. Metal parts are made of finest steel and malleable iron. Rugged, perfect service is assured in a GLOBE Silo.

Prices: \$3.00 per ton capacity up, according to size. Write TO-DAY for catalog and agency proposition.

GLOBE SILO CO., Box 105, Unadilla, N. Y.

SWEET WHITE BLOSSOM CLOVER

\$285 Bu. Dept. 915 Chicago, Ill.

UNADILLA SILOS

No Other Silo Like It

SILOS may look alike from the rear, but a Unadilla Silo has its unusual character on its front. To judge a man, you "look him in the face". Judge silos the same way.

Silos are made to use, twice a day, for 6 or 7 months. Climbing in and getting out is a chore—but not with a Unadilla. An ever-ready, safety ladder formed by the door-front ladder makes it easy and safe. Here, too, you tighten or loosen hoops when necessary—and preserve the life of the silo.

In a Unadilla you *push* silage out at the door level, because these doors can't stick or freeze tight. Silage is removed on a level and not pitched overhead. You don't *jump* into a Unadilla, you *step* into it.

There is no other silo like Unadilla in convenience, safety and labor saving that its front affords.

Send for the big, new catalog illustrating all Unadilla features.

UNADILLA SILO CO., Box B, Unadilla, N. Y.

CRAINE TRIPLE WALL SILOS

For More Protection

Craine 3-Wall Silos offer more protection to your silage; greater protection for your silo investment.

With their giant strength is combined a handsome, smooth, upright exterior that is unmarred by bothersome hoops and ugly lugs.

Three walls reinforce every square inch of surface against tremendous strain of tons of weight inside and violent weather from without.

Men who know silos from experience with others or through investigation choose Craine Triple-Wall Silos.

You can rebuild an old stave, iron-hooped silo into a permanent, beautiful Craine 3-Wall structure at about half the cost of a new one.

Write for Illustrated Catalog. Early orders earn extra discount.

CRAINE SILO CO., Inc.
Box 120, Norwich, N. Y.

He Always Told The Truth

The Deacon Sold the Dominie a Cow, But—!

THE Rev. Winfield Babington Kelsey By C. F. ROGERS

had just located his family in a new parish. At the rear of the manse was a small barn and a beautiful little stretch of pasture land. He was happy indeed to be out in the fresh country air again after having spent ten years in the city. "If I had a cow to crop some of the grass that is going to waste in that pasture it would give me a little exercise in caring for her, and would afford my family all the milk, butter and cottage cheese that they could consume," thought the minister.

That very afternoon he started out to purchase a milk producer. Meeting a farmer on the road, he asked if he knew where he could buy a good cow. "Be you the new minister?" queried the farmer. "I am," answered Rev. Mr. Kelsey. "Wal, then, that man who lives in yonder yellow house always has cows for sale or trade." Thanking the man, the prospective buyer went on

"Is this cow a good one?" inquired the prospective buyer as he pointed to a big, square, typey, white individual. A lump began to rise in the milker's throat. Maybe this man wasn't as big a fool as he tries to make out. He had spotted the best cow in the herd the very first thing. That's isn't a cow that you would want; I couldn't conscientiously sell you that cow," answered the owner. When the farmer finished milking the cow, he appeared to walk aimlessly down the alley mentioning the good points of one cow after another, while all the time he was moving as fast as possible toward the cow which he wished most to sell. As he reached the third animal from the end of the row, he stopped and remarked, "There is a cow that I would sell easy."

The eye of the would-be purchaser rested on the little black cow with evident satisfaction. Because of her sleek, slippery condition, she did not appear

"All I told you," said the Deacon, "was that her mouth was just as good as mine, and that was the truth, 'cause I haven't got a tooth in my head"

his way. "Come, Tips," commanded the farmer as his big black was a little slow in getting under motion, "ef Deacon Bartley trims his own preacher es bad es he skinned me on our last trade, I shouldn't wonder but what folks will be lookin' for another preacher before fall," chuckled the farmer.

Deacon Bartley's big, powerful hands were extracting two large streams of milk from one of his best producers as a small, neat-looking man walked down the alley behind the cattle. "Can you tell me who has a good cow for sale?" he asked of the tall, thin man on the milk stool. "Amos Bartley has got good cows. He don't keep any other kind, and anything or everything he has in the barn is for sale or trade." "Who is Mr. Bartley," asked the little man. "I am Amos Bartley," replied the milker. "Now you just go ahead, pick out any cow that suits you, ask any questions you care to about her, and I will promise to answer them truthfully."

In fairness to the Deacon, let it be said that he supported his family well, helped his neighbors when they were in trouble, intended to go to church regularly, prayed with fervent devotion at the prayer meetings and had a splendid Christian character. But, like all human beings, Deacon Bartley had a weakness, a time when the lower, worldly man conquered the higher, spiritual man, and that one time was when a cow deal was on. The man knew his weakness, but always tried to soothe his conscience by repeating to himself the fact that he always told the truth. However, he never could bring himself to say that he told all the truth.

When Deacon Bartley was not cow-trading, his countenance was kind, meek, and pious, but when the winds of barter were in the air his gray-blue eyes assumed a keen, steel-like glance and his mouth curled in a half leer and a half smile which was known throughout the country-side as Deacon Bartley's smirk.

like a thirteen-year-old, and her large, meaty udder evidenced a heavy producer, in the estimation of the minister. "How much does she give?" asked the preacher. "Right to-day she gives more milk than any cow in this end of the row," responded the owner. "Has she any teeth?" was the next question. "She's got more teeth than I have," was the prompt rejoinder. "Does she kick when she is milked?" asked the minister. "No, she does not kick when she is milked," answered the farmer. "Would she make a good family cow?" was the last question. "With that good cow in his possession a man would be sure to have peace in the home. If you want that cow for (Deacon Bartley now looked indescribably wise) fifty dollars she is yours." The minister pulled out five ten-spots, borrowed a rope and led his prize home.

"You've been cow tradin'; that self-satisfied smirk gives you dead away," demanded Mrs. Bartley that evening at the supper table. "Yes, I sold a cow that I'd been trying to dispose of for the last seven years, and, by the way, Carlotta, we've got to get out to church Sunday; Brother Bowers tells me that the new Elder is the Godliest man who ever stood in our pulpit. To think of them getting such a preacher as that without a word of counsel from me is unbelievable."

Two evenings after the deal, the minister, rope in hand, entered the stable. In an angry voice he shouted: "You said that cow was a big milker, had a good mouth, was a non-kicker, and would make an ideal 'family cow!' Deacon Bartley's face was so meek, so kind, that the speaker felt almost sorry for the man as the latter began to defend himself in a mild, passionless voice. "I didn't say the cow was a big milker; I said that she gave more milk yesterday than any cow in this end of the row. All the other cows in this end of the row are dry."

"I said that she had more teeth than I've got, but that didn't mean that she

had a good mouth, for I haven't a tooth in my head. You asked whether she kicked when she was milked, and she doesn't, for she's all through kicking then. It's when she is being milked that she makes things lively. I didn't say that she was an ideal cow, but I did think she ought to keep peace because, where there is nothing worth quarreling over, there is usually peace."

"That's all right," said the little man, "we will have to make the best of it. I just wish to say, Deacon Bartley, that I am the new minister, and that next Sunday being communion, I would like very much to have all the deacons present."

The 67th Congress and the Farmer

(Continued from page 241)

provided that "butter" shall be understood to mean the food product usually known as butter, and which is made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter, and containing not less than 80 per cent by weight of milk fat, all tolerances having been allowed for."

8. The Anti-filled Milk Act. One of the most dramatic struggles was that which resulted in the passage of a federal Anti-filled Milk Act. This act became a law on March 3, but no prosecutions for penalties are to be enforced for any violation until 30 days after it became a law. The act forbids the manufacture and sale within the District of Columbia and the territories and possessions of the United States, and the shipment in interstate or foreign commerce of milk compounds containing as an ingredient any fat other than milk fat.

Reforming Farm Finance

Farmers resented very much the restriction of farm credit during the closing year of the Wilson and the first year of the Harding administrations. They thought that something was fundamentally wrong with the policies of the Federal Reserve System, and demanded that a farmer representative be placed upon the Board. A bill was introduced to this effect and became a law. The President then appointed Milo D. Campbell of Coldwater, Mich., to this position. Mr. Campbell was the President of the National Milk Producers' Federation until he accepted the appointment.

Farmers also asked for a complete reorganization of the whole scheme of farm finance. Many bills were introduced, and Congress finally passed a composite credit act. This act does not, however, make any drastic changes in the existing credit machinery of the country. Its purpose was rather to loosen up at the top the flow of credit by providing a wider investment market for agricultural paper. The act in brief does this:

1. It makes more readily available the commercial credit facilities of the country by lengthening the rediscount privileges on agricultural paper to say from six months to nine months.

2. It authorizes the formation of a new series of agricultural banking corporations, formed with private capital whose purpose is to lend money mainly to growers and fatteners of live stock.

3. It extends the life of the War Finance Corporation to February 29, 1924.

4. It sets up twelve regional governmental banks attached to the offices of the twelve Federal Farm Land Banks. These banks, known as intermediate credit banks, are authorized to purchase agricultural paper running from six months to three years in maturity and to make direct loans to agricultural cooperative marketing associations on the security of warehouse receipts or bills of lading. The cooperative association may borrow money for either processing or the storing of commodities.

Each of these banks is to start with \$5,000,000 capital.

Bills that Failed

Among the bills that farmers wanted that failed to pass were:

Measures for the disposal of the Government property at Muscle Shoals, Ala.; the Truth in Fabric Bill; the Standard Containers Act; amendments to the Transportation Act of 1921; a bill to purchase nitrate.

Helps Cows Make More Milk

Sugared Schumacher Feed helps cows to make more milk by providing them with a variety of wholesome body building grains, ample sustenance for bodily maintenance, so that they do not have to draw on any of the protein concentrates for their physical needs, but can convert ALL of the protein, part of the ration you feed them, into milk.

It's sweet — cows like it — they eat it with relish and it keeps their appetite keen — they don't get "off their feed." It keeps them healthy — full of vim, vigor and vitality — that's why

SUGARED

SCHUMACHER FEED

Is Noted for Its LONG TIME Milk Production

The World's Greatest Carbohydrate Ration—it is composed of Wheat, Oats, Corn and Barley, combined with Oil Meal and Salt. This mixture is properly balanced, kiln dried and made sweet with the addition of a liberal amount of dried Cane Molasses. Feed it with any protein concentrate you prefer and notice how quickly the general health condition of your herd will improve and milk yields increase. Sugared Schumacher will prove its right to the name of an udder feed—the milk pail tells the tale. Your dealer can supply you.

IF YOU SAY:

"I saw your ad in the *American Agriculturist*" when ordering from our advertisers, you will benefit by our guarantee to refund the price of goods purchased by any subscriber from any advertiser who fails to make good if the article purchased is found not to be as advertised.

No trouble, that. And you insure yourself from trouble.

Live Stock Offerings

either for sale or purchase. Can best be reached through a live medium. Classified advertisements in the *AMERICAN AGRICULTURIST* bring substantial results from both near and far.

New Way to Rid Poultry of Lice

Amazing Discovery Keeps Hens and Chicks Free From All Vermin

Few Drops in Drinking Water Does It—No Dusting, Spraying Or Greasing

Sickly, lice-infested Hens cannot lay or have good hatches. Vermin sap the very life and strength of hens and baby chicks.

Lice, Mites, Ticks and other pests positively will not stay on fowls where Imperial Lice and Mite Remedy is used occasionally in drinking water. Guaranteed not to affect eggs or flesh of fowls in any way. Also a splendid tonic and blood purifier. Costs but a trifle, on money-back guarantee of satisfaction.

White Diarrhea Remedy Free

At last a sure treatment for this dread disease. No muss. No fuss. Comes in condensed tablet form to be dropped occasionally in chicks' drinking water. Raise every chick hatched. Economical to use. Be prepared. These remedies should always be on hand.
SEND NO MONEY. Just your name and address to Imperial Laboratories, Dept. 3580, Kansas City, Mo., for one regular, full size \$1.00 bottle of Imperial Lice and Mite Remedy (double strength), and they will include free of cost, a regular \$1.00 box of Imperial White Diarrhea Remedy. Pay postman only \$1.00 and few cents postage on arrival. Your \$1.00 refunded any time in 30 days if not satisfied.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

The Valley of the Giants—By Peter B. Kyne

"BUCK, you're a wonder."
"Not at all. I've merely been through all this before and have profited by my experience. Now, then, will the city council grant you a franchise to enter the city and jump Pennington's tracks?"

"I'm sure I don't know, Buck. You'll have to ask them—sound them out. The city council meets Saturday morning."

"They'll meet this evening—in the private dining room of the Hotel Sequoia," Buck Ogilvy declared emphatically. "I'm going to have them all up for dinner and talk the matter over. I'm not exactly aged, Bryce, but I've handled about fifteen city councils and county boards of supervisors, not to mention Mexican and Central American governors and presidents, in my day, and I know the breed. Following a preliminary conference, I'll let you know whether you're going to get that franchise without difficulty or whether somebody's itchy palm will have to be crossed with silver first."

"Two of the five councilmen are for sale; two are honest men—and one is an uncertain quantity. The mayor is a politician. I've known them all since boyhood, and if I dared come out in the open, I think that even the crooks have sentiment enough for the Cardigans to decline to hold me up."

"Then why not come out in the open and save trouble and expense?"

"I am not ready to have a lot of notes called on me," Bryce replied dryly. "Neither am I desirous of having the Laguna Grande Lumber Company start a riot cutting prices. Neither do I desire to have trees felled across the right of way of Pennington's road after his trainloads of logs have gone through and before mine have started. I don't want my log-landings jammed until I can't move, and I don't want Pennington's engineer to take a curve in such a hurry that he'll whip my loaded logging-trucks off into a canon and leave me hung up for lack of rolling-stock."

"Hum-m-m! Slimy old beggar, isn't he? I dare say he wouldn't hesitate to buy the city council to block you, would he?"

"I know he'll lie and steal. I dare say he'd corrupt a public official."

Buck Ogilvy rose and stretched himself. "I've got my work cut out for me, haven't I?" he declared with a yawn.

Bryce pressed the buzzer on his desk, and a moment later Moira entered. "Permit me, Moira, to present Mr. Ogilvy. Mr. Ogilvy, Miss McTavish." The introduction having been acknowledged, Bryce continued: "Mr. Ogilvy will have frequent need to interview me at this office, Moira, but it is our joint desire that his visits here shall remain a profound secret. To that end he will hereafter call at night. You have an extra key to the office, Moira. I wish you would give it to Mr. Ogilvy."

The girl nodded. "Mr. Ogilvy will have to take pains to avoid our watchman," she suggested.

"That is a point well taken, Moira. Buck, when you call, arrive here promptly on the hour. The watchman will be down in the mill then, punching the time-clock."

AGAIN Moira inclined her dark head and withdrew. Mr. Buck Ogilvy groaned. "God speed the day when I'll be permitted to call during office hours," he murmured. He picked up his hat and withdrew. Half an hour later, Bryce looked out and saw him draped over the counter, engaged in animated conversation with Moira McTavish. Before Ogilvy left, he had managed to impress Moira with a sense of the disadvantage under which he labored through being forced, to abandon all hope of seeing her at the office—at least for some time to come. Then he spoke feelingly of the unmitigated horror of being a stranger in a strange town, forced to sit around hotel lobbies with drummers and other lost souls, and drew from Moira the assurance that it wasn't more distressing than having to sit around a boarding-house night after night watching old women tat and tattle.

This was the opening Buck Ogilvy had sparred for. Fixing Moira with his bright blue eyes, he grinned boldly and said: "Suppose, Miss McTavish, we start a league for the dispersion of gloom. You be the president, and I'll be the financial secretary."

"How would the league operate?" Moira demanded cautiously.

"Well, it might begin by giving a dinner to all the members, followed by a little motor-trip into the country next Saturday afternoon," Buck suggested.

Moira's Madonna glance appraised him steadily. "I haven't known you very long, Mr. Ogilvy," she reminded him.

"Oh. I'm easy to get acquainted with," he retorted lightly. He pondered for a moment. Then: "I'll tell you what, Miss McTavish. Suppose we put it up to Bryce Cardigan. If he says it's all right we'll pull off the party. If he says it's all wrong, I'll go out and drown myself—and fairer words than them has no man spoke."

"I'll think it over," said Moira. "By all means. Never decide such an important matter in a hurry. Just tell me your home telephone-number, and I'll ring up at seven this evening for your decision."

MOIRA gave him the number. She was not at all prejudiced against this carroty stranger—in fact, she had a suspicion that he was a sure cure for the blues, an ailment which she suffered from all too frequently; and, moreover, his voice, his manner, his alert eyes, and his wonderful clothing were all rather alluring. Womanlike, she was flattered at being noticed—particularly by a man like Ogilvy, who was vastly superior to any male in Sequoia, with the sole exception of Bryce Cardigan. The flutter of a great adventure was in Moira's heart, and the flush of a thousand roses in her cheeks when, Buck Ogilvy having at length departed, she went into Bryce's private office to get his opinion as to the propriety of accepting the invitation.

"By all means, accept," he counselled her. "Buck Ogilvy is one of the finest gentlemen you'll ever meet. You'll find him vastly amusing, Moira, and he does know how to order a dinner."

"Don't you think I ought to have a chaperon?"

"Well, it isn't necessary, although it's good form in a small town like Sequoia, where everybody knows everybody else."

"I thought so," Moira murmured thoughtfully. "I'll ask Miss Sumner to come with us. Mr. Ogilvy won't mind the extra expense, I'm sure."

"He'll be delighted," Bryce assured her maliciously. "Ask Miss Sumner, by all means."

When Moira had left him, Bryce sighed. "Gosh!" he murmured. "I wish I could go, too."

He was roused presently by the ringing of the telephone. To his amazement Shirley Sumner was calling him!

"You're a wee bit surprised, aren't you, Mr. Cardigan?" she said teasingly.

"I am," he answered honestly.

"I suppose you're wondering why I have telephoned to you?"

"No, I haven't had time. Why did you ring up?"

"I wanted some advice. Suppose you wanted very, very much to know what two people were talking about, but couldn't eavesdrop. What would you do?"

"I wouldn't eavesdrop," he told her severely. "That isn't a nice thing to do, and I didn't think you would contemplate anything that isn't nice."

"I wouldn't ordinarily. But I have every moral, ethical, and financial right to be a party to that conversation, only—well—"

"With you present there would be no conversation—is that it?"

"Exactly, Mr. Cardigan."

"Yes."

"And you do not intend to use your knowledge of this conversation, when gained, for an illegal or unethical purpose?"

"I do not. On the contrary, if I am aware of what is being planned, I can

prevent others from doing something illegal and unethical."

"In that event, Shirley, I should say you are quite justified in eavesdropping."

"But how? I can't hide in a closet and listen."

"Buy a dictograph and have it hidden in the room where the conversation takes place."

"Where can I buy one?"

"In San Francisco."

"Will you telephone to your San Francisco office and have them buy one for me and ship it to you, together with directions for using? George Sea Otter can bring it over to me when it arrives."

"Shirley, this is most extraordinary."

"I quite realize that. May I depend upon you?"

"Certainly. But why pick on me, of all persons?"

"I can trust you to forget about it."

"Thank you. I think you may safely trust me. And I shall attend to the matter immediately."

"You are very kind, Mr. Cardigan. How is your dear old father? Moira told me sometime ago that he was ill."

"He's quite well again, thank you. By the way, Moira doesn't know that you and I have ever met. Why don't you tell her?"

"I can't answer that question—now. Perhaps some day I may be in a position to do so."

"It's too bad the circumstances are such that we see so little of each other, Shirley."

"Indeed, it is. However, it's all your fault. I have told you once how you can obviate that distressing situation. But you're so stubborn, Mr. Cardigan."

"I haven't got to the point where I like crawling on my hands and knees," he flared back at her. "Even for your sake, I decline to simulate friendship or tolerance for your uncle; hence I must be content to let matters stand as they are between us."

She laughed lightly. "So you are still uncompromisingly belligerent—still after Uncle Seth's scalp?"

"Yes; and I think I'm going to get it. At any rate, he isn't going to get mine."

"Don't you think you're rather unjust to make me suffer for the sins of my relative, Bryce?" she demanded.

She had called him by his first name. He thrilled. "I'm lost in a quagmire of debts—I'm helpless now," he murmured. "I'm not fighting for myself alone, but for a thousand dependents—for a principle—for an ancient sentiment that was my father's and is now mine. You do not understand."

"I understand more than you give me credit for, and some day you'll realize it. I understand what even my uncle doesn't suspect, and that is that you're the directing genius of the Northern California Oregon Railroad and hiding behind your friend Ogilvy. Now, listen to me, Bryce Cardigan: You're never going to build that road. Do you understand?"

THE suddenness of her attack so amazed him that he did not take the trouble to contradict her. Instead he blurted out defiantly: "I'll build that road if it costs me my life—if it costs me you. I'm in this fight to win."

"You will not build that road," she reiterated.

"Why?"

"Because I shall not permit you to. I have some financial interest in the Laguna Grande Lumber Company, and it is not to that financial interest that you should build the N.C.O."

"How did you find out I was behind Ogilvy?"

"Intuition. Then I accused you of it, and you admitted it."

"I suppose you're going to tell your uncle now," he retorted witheringly.

"On the contrary, I am not. I greatly fear I was born with a touch of sporting blood, Mr. Cardigan, so I'm going to let you two fight. You can save money by surrendering now."

"I prefer to fight. With your permission this bout will go to a knock-out."

"I'm not so certain I do not like you all the more for that decision. And if it will comfort you the least bit, you have my word of honor that I shall not reveal to my uncle the identity of the man behind the N. C. O. I'm not a tattletale, you know, and moreover I have a great curiosity to get to the end of the story."

"Can you remain fair and impartial?"

"I think I can—even up to the point of deciding whether or not you are going to build that road."

"Shirley," he told her earnestly, "listen carefully to what I am about to say: I love you. I've loved you from the day I first met you. I shall always love you; and when I get around to it, I'm going to ask you to marry me. At present, however, that is a right I do not possess. However, the day I acquire the right I shall exercise it."

"And when will that day be?" Very softly, in awesome tones!

"The day I drive the last spike in the N. C. O."

Fell a silence. Then: "I'm glad, Bryce Cardigan, you're not a quitter. Good-bye, good luck—and don't forget my errand." She hung up and sat at the telephone for a moment, dimpled chin in dimpled hand, her glance wandering through the window and far away across the roofs of the town to where the smokestack of Cardigan's mill cut the sky-line. "How I'd hate you if I could handle you!" she murmured.

FOLLOWING the conversation, Bryce Cardigan was a distressed and badly worried man.

For an hour he sat slouched in his chair, the while he viewed every angle of the situation. He found it impossible, however, to dissociate the business from the personal aspects of his relations with Shirley, and he recalled that she had the very best of reasons for placing their relations on a business basis rather than a sentimental one.

It was all a profound and disturbing mystery, and after an hour of futile concentration there came the old childish impulse to go to his father with his troubles.

"He will be able to think without having his thoughts blotted out by a woman's face," Bryce soliloquized.

Straightway Bryce left the office and went home to the old house on the knoll. John Cardigan was sitting on the veranda, and from a stand beside him George Sea Otter entertained him with a phonograph selection. As the gate clicked, John raised his head; then he rose and stood with one hand outstretched. He knew his son's step.

"What is it, son?" he demanded gently as Bryce came up the low steps.

"George, choke that contraption off."

Bryce took his father's hand. "I'm in trouble, John Cardigan," he said simply, "and I'm not big enough to handle it alone."

The leonine old man smiled, and his smile had all the sweetness of a benediction. His boy was in trouble and

(Continued on page 255)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

WHEN Buck Ogilvy struck Sequoia, things began to hum. He was Bryce Cardigan's old college friend, but because Buck came to push a railroad which Bryce was secretly backing they had to seem unacquainted.

Old Cardigan had been beaten at every turn by the unscrupulous Colonel Pennington, but his son sensed a way to make the Cardigan timber accessible and defeat the Colonel's plan to starve them out. Things were complicated, however, by the fact that Bryce had fallen in love with the Colonel's niece, Shirley, who unknown to him had bought the Cardigan's Valley of the Giants, checkmating her uncle and giving Bryce the necessary funds to wage his fight.

The Vacuum Tube

A Vital Part of the Radio Receiving Set

VACUUM tubes will be used almost exclusively by farmers in their radio receiving sets because of their incomparable superiority over the simple crystal as a detector of radio waves. Nor are they complicated in their operation. The radio enthusiast should become acquainted with them and understand how to conserve and get the best service from them.

All tubes are essentially the same in principle, although they may differ somewhat in appearance, in current consumed, and in price. What is a tube, anyway? A glass bulb with practically all of the air removed having three important elements enclosed within it. One of these, which usually occupies a position right in the center of the bulb, is the filament, and it is the same in construction and in operation as the filament of any electric light bulb.

The filaments of tubes sold for radio use are lighted by batteries whose voltage varies from 1½ to 6. The amount of current used runs between ½ ampere and 1 ampere. What is the purpose of the filament? In any metallic substance there are an infinite number of "electrons" or minute negative charges of electricity shooting back and forth within its boundaries. Now, if that piece of metal be heated, some of the electrons will pierce the surface and escape. The hotter the metal becomes, the more electrons are going to escape.

The Electron Activity

There are millions of electrons in the filament of a vacuum tube. The current from the battery passing through the filament, heats the metal and speeds up the electronic activity until many of them dart right out. What happens to them? Surrounding the filament may be seen a spiral coil of wire, the second element of the tube, known as the "grid." For the present, let us assume the grid coil not connected at all, and the electrons passing through its wires. The third element of the tube is a cylindrical or flattened sheet of metal, usually of nickel, which encompasses the other two elements. This is called the "plate," and is connected to a battery of 22½ volts or more, with the positive end of the battery to the plate.

As we noted before, the electrons are negative charges of electricity, and since unlike electrical charges attract each other, the positively charged plate draws the negative electrons from the filament to it in a steady stream. The number of electrons passing over in this way depends upon the brilliancy of the filament and upon the voltage of the plate or "B" battery.

Let us remember now that between the plate and the filament is interposed this spiral coil of wire called the grid. Suppose the grid is connected to the tuning coil of a receiving set. The radio waves striking the aerial, set up a current rapidly changing its direction, as we have seen with our crystal set. This means that the electrical charge impressed upon the grid from the tuning coil will alternate from negative to positive as the current in the coil changes its direction.

With the grid charged with positive electricity, the flow of electrons from the filament will be slightly enhanced, since there will be even a greater positive attraction from them, represented by the positive grid and positive plate combined. But when the aerial current changes, and the grid is charged with negative electricity. What happens then? Like electrical charges, repel each other. Therefore the negative charge on the grid opposes the flow of electrons from the filament, since it completely surrounds it. Of course it cannot completely throttle the flow of electrons, but it reduces the flow in accordance with the strength of the negative charge.

Cutting off the passage of electrons to the plate will naturally cut down proportionately the amount of current flowing in the telephone receivers, and produces a fluctuation of the telephone current in sympathy with the fluctua-

tion of the charge on the grid coil. The vacuum tube may be seen to have a "trigger" action, since a small variation in the charge on the grid controls a much larger amount of current through the receivers. The operation may be likened to that of a simple hand valve on a large supply line, where a great volume of water may be controlled by an easy movement of the valve. In fact, vacuum tubes in England are called "valves" because of that analogy.

Get Good Tubes

Little can be said about the value of a certain tube just from its appearance, and for this reason the radio purchaser should always insist upon a tube manufactured by a manufacturer of national repute. There is a critical value of the amount of air removed, and the amount of gas present in a tube, which can scarcely be attained in manufacture except where the process is carried on in a large well-equipped factory.

The WD-11 tube, which operates on a single dry battery, is unusually scarce at present, but a new tube will soon appear on the market, which is the same in construction and in operation, but which fits the standard tube socket. It will be known as the WD-12. Another new tube which is now available, is the UV-201 A tube, which is similar though superior to the old familiar UV-201. The UV-201 A requires but one quarter of an ampere filament current, and may be lighted from four dry cells connected in series or from the regular 6-volt storage battery. This is quite an advantage over the 201 tube, which requires four times as much current. However, the 201 A is not quite as satisfactory for detection purposes as the 200, and will be used more extensively for amplification.

Several types of Navy tubes are available. The VT-1 operates well as detector or amplifier, and the VT-2 being especially suited for amplification where there is considerable volume to be taken care of. Both these tubes require a storage battery for satisfactory operation. It may be stated as a general rule that no tube should be illuminated more brilliantly than necessary for good volume or good regeneration, for fear of shortening its life or burning it out by excessive current. The 1½-volt tubes should be treated with exceptional care in this respect, and their filaments should display nothing more than a very faint red glow when they are operated properly.

The Valley of the Giants

(Continued from page 254)

had come to him. "Sit down, son, and tell the old man all about it."

Bryce obeyed, and for the first time John Cardigan learned of his son's acquaintance with Shirley Sumner and the fact that she had been present in Pennington's woods the day Bryce had gone there to settle the score with Jules Rondeau. In the wonderful first flush of his love a sense of embarrassment had decided Bryce not to mention the matter to John Cardigan until the *entente cordiale* between Pennington and his father could be reestablished, for Bryce had entertained for a few days a thought that he could bring about this desirable condition of affairs. The discovery that he could not, together with his renunciation of his love until he should succeed in protecting his heritage, had further operated to render unnecessary any discussion of the girl with the old man.

With the patience and gentleness of a confessor John Cardigan heard the story now, and though Bryce gave no hint in words that his affections were involved in the fight for the Cardigan acres, yet did his father know it. And his heart went out in sympathy for his boy.

"I understand, sonny, I understand. This young lady is only one additional reason why you must win, for of course you understand she is not indifferent to you."

Dickie, The Pet Raccoon

A Story for the Children—More Pin Money Hints

OF all the pets I've ever had, none gave me more fun than my clever little raccoon "Dickie." Dickie was perfectly tame, very smart and most affectionate.

In their wild state, of course, raccoons will fight and bite viciously, also scratch and dig with their hind feet, all four feet having long, sharp claws or nails. When full size, they weigh from twelve to fourteen pounds. They have two sets of fur, something like the angora cat, only heavier. The under or short fur is very thick and fine, and varies in color, some I have owned being dark brown, while others were quite light. The outside hair is long and grey, slightly brown-tipped. Their tails are round and fluffy and striped alternately brown and grey. When wild, they catch mice, birds and dig certain roots; climb for all kinds of nuts; steal the farmer's corn if they are near a farm; are mischief-makers, for they will pull down a great deal more than they eat or carry away; are great for stealing poultry, which they invariably carry to their nest. They have sharp, quite pointed black noses, and black bead-like eyes.

When tame, these eyes just shine with fun and mischief. They are terribly curious, wanting to handle and examine everything they see. Their velvety front paws are like little black hands, thumb and all. If you get them young, they are the most affectionate and intelligent animals. They love those who love them, and learn to obey and are as clean as a well-trained cat or dog. They do not enjoy being washed off all over very much, but love to play in water with their hands. I think

I have the thimble to-day. He would take everything out of your pockets and put them back, and even hairpins out of your hair, unless you said, "Don't do that, Dickie."

Coons have to be watched constantly, for they are so curious and mischievous. One day I hurried into another room, leaving a pail of skimmed milk on the floor, and also some ashes in the coal scuttle. When I came back, he was so still I stopped to see what he was "up to." He would wet his little paws in the milk, then pat them in the ashes, and he had the pantry door plastered all over as high as he could reach.

Raccoons are wonderful pets if one has time and patience to care for them. Ours never bit or hurt us. They and the kittens played together. They and the good dog were friendly, yet they did not seem to like to be left alone with him. They have a fear, a natural one, of dogs, I guess.

I sold Dickie finally to a professor at Ithaca. About six months later I went to see him, and he just fell into my arms and couldn't kiss me enough. I took along his little apron and bread and milk and a spoon and fed him. He had forgotten nothing. I hope the story of Dickie will give some who know nothing of coons an idea of what really intelligent little woods-people they are.—MRS. IDA A. BROWN.

COTTAGE CHEESE IS PROFITABLE

Some "pin-money pointers" which farm women might appreciate were given me recently by Mrs. Lints, a neighbor who has done wonders with

A SONG FOR WINTER

NANCY BUCKLEY

Oh! the little flakes are falling, falling white and fair,
Like a host of butterflies, swift-darting through the air;
And the little winds are calling, calling soft and low,
As amid the friendly pines they wander to and fro.

Oh! the little stars are singing, singing in the sky,
Listening to the silver waves that beat a clear reply;
And my little dreams are bringing, bringing back to me
Days of joy and sweetness, happy days that used to be.

their fur is so thick that after a bath they feel cold before they are dry, but they love to have their face and hands washed and wiped. They walk and sit up like a bear.

Some of Dickie's Tricks

Dickie would put his arms around my neck and hug and kiss me, and I had a little bibbed apron with armholes which I would hold up before him, and he would stand up and put his arms through the holes. Then I would take him up and feed him bread and milk with a spoon just as you do children. He had a low basin which I would fill with water, and he would sit there and wash marbles hour after hour. Once he washed his cookie, which he loved, and it went to mush, and he just whined.

When I sat down to sew, he sat up on the sofa and played with a string of buttons, or rattle box, or a thimble. That thimble was always a curiosity to him, some way. He would hold it with one hand against his stomach and look right up at the wall overhead, and feel inside the thimble. Then he would bite on it, until he bit tiny holes through it.

her sale of cottage cheese. Her account of it is as follows:

"Are there opportunities for farm women to earn money? Why, yes, of course, there are. I've earned money off and on all my life, but the easiest that came was my cottage cheese money."

"One winter we milked five Jerseys from which we made butter, delivering to our customers once a week. Preceding the delivery, I turned two days' skimmed, or separated milk into cheese. This we delivered with the butter. Some would be ordered, and the remainder sold readily. People seem to be crazy for good cottage cheese."

"This was about all clear gain, deducting a trifle for the bit of cream I used. The whey I fed to our pigs. I made the cheese into balls wrapped in oiled paper; the selling price figured at 20 cents a pound. Those winter months I earned \$55."

This reminded me of a family at C— who are making a great success of cottage cheese. They go so far as to buy outside milk. They make pimento also, which is a great seller. This is made by adding to ordinary cottage cheese and canned pimento peppers. An 18-cent can will flavor quite an amount; this sells for one cent more a ball. On regular days these people send to the surrounding towns boys who peddle it from door to door. Friday night is cheese-supper night in this town.

At some plants more skimmed milk is produced than is taken by the farmers, and it is dumped out. Why do not some ambitious women buy or beg that milk and turn it into profit? Surely, there are many ways of earning pin-money, but making cottage cheese is one of the best, because people really want it.—ELIZABETH HOAG.

Stove for a Dime

A handy, sheet steel folding stove. Folds flat. Weighs 8 ounces. Great for cooking, heating water, warming baby's milk, etc. Hundreds of uses.

Killed 200 Rats At One Baiting

Dog, Ferret and Traps Failed—Amazing Virus Quickly Killed Them All. Not a Poison

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Was discouraged. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

"The year previous Rats killed 200 out of 300 baby chicks. Last year saved them all. Will send for 10 bottles for neighbors, and we will clean up the whole neighborhood."

Rats, Mice, Gophers, in fact all Rodents, greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside hunting air and water. Harmless to humans, poultry, pets, stock, etc. Economical to use. Indorsed by Farm Bureau Experts and large, nationally known institutions everywhere.

You Can Get Yours Free

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 1003, Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay postman only \$1.00 and few cents postage on arrival. Use one yourself and sell the other to a neighbor, thus getting yours free. Readers risk no money, as Imperial Laboratories are fully responsible and will refund your \$1.00 on request any time within 30 days.

SPECIAL 1/2 PRICE OFFER

We have just imported a quantity of these fine little French Opera and Field glasses at a very low price, and are selling them very little above cost. They are well made of black metal, leatherette covered with leatherette carrying case. Good clear lenses. Adjustable, and nicely finished. They won't last long at this price. SEND TODAY. Well worth \$2.00. Postpaid to any address \$1.25; or TWO for \$2.00. DUPLUX MFG. CO. Dept. R2 Detroit, Mich.

Some Interesting Recipes

And an Extra Number of Patterns for Early Spring

TWO recipes for cakes which are especially appropriate just now because of their use of molasses have been contributed by Mrs. Ida A. Brown of Elmira, N. Y. One has no name; she simply calls it a Brown Cake, and some of our readers may recognize it from the description and know it by some other name. The other is called Apple Sauce Cake, and the recipes follow:

A Brown Cake

One well-beaten egg, $\frac{3}{4}$ cup brown sugar, 1 full cup molasses, $\frac{1}{2}$ cup sour cream or milk, $\frac{1}{2}$ cup hot coffee, 1 teaspoon soda, 2 teaspoons baking powder, sift in 2 cups of flour.

This needs chocolate icing and filling, and the following is excellent: Two large tablespoonfuls soft butter, $1\frac{1}{4}$ cups confectionary sugar, 2 tablespoonfuls hot coffee, 2 tablespoonfuls melted chocolate. Beat all together until creamy.

Apple Sauce Cake

One cup of sugar, $\frac{1}{2}$ cup molasses, $1\frac{1}{2}$ cups apple sauce (cold), 2 cups flour, 2 teaspoonfuls soda stirred into apple sauce, $\frac{1}{2}$ teaspoon cinnamon and $\frac{1}{2}$ teaspoon cloves, 1 cup raisins or currants, or both.

This should be a soft cake, and is better as it stands, like most fruit cake.

Mrs. Brown also says that graham flour pudding is popular in her part of the country. As a recipe for using graham flour for pudding is rather unusual, we are glad to pass it along as well.

Graham Pudding

Two cups graham flour, 1 cup molasses, 1 cup sweet milk, 1 cup chopped

raisins, 1 beaten egg, pinch of salt, 2 teaspoonfuls soda (dissolved in little warm water).

Steam two hours. It may need a little more flour, depending on the size of the cups used as measures. It should be as thick as cake dough.

WAYS OF FIGHTING ANTS

"How can I get rid of ants which have infested my kitchen?"

Here are two suggestions which other housekeepers have found helpful.—Follow the train to its origin. Saturate a cloth with oil of sassafras and apply thoroughly over every portion of their track. If they come through a crack, saturate the edges of the crack with the oil. One ounce will probably be enough. If this does not work at once, repeat the treatment, but be sure you have covered every place through which the ants may gain access to your kitchen.

It is said that if a few drops of paregoric are put in water in a shallow dish the ants will fall in during the night. Red pepper is also said to be efficacious in exterminating them. Perhaps some of our readers may be able to suggest other methods of fighting the pests.

How to decorate a ceiling is sometimes a puzzle. The first rule of the professional is: "Use a color of the same character as that of the wall and floor coverings but lighter in tone." A high ceiling is made to seem lower by means of a border by extending the ceiling cover down the upper wall, or by using a paper with a distinct figure.

Every Day I Send Checks To Women Who Want Money

A Simple Way To Add To Your Regular Income. Interesting Home Work That Pays Well—and That You Can Do In Spare Time

EVERY day about 4 o'clock a bunch of checks is brought to my desk to be signed.

Most of these checks are made out to women. A few are sent to men.

They are all in payment for interesting spare-time work done at home. Work that can be done entirely at one's

own convenience—started and stopped just when one finds the time or feels in the mood for it. It's a profitable and dignified kind of work that needn't interfere a particle with other duties.

The checks I am daily sending out to our spare-time home workers range all the way from around \$3 to \$5 up to around \$10, and occasionally as high as \$15 or \$20 or more.

Some of our home-workers get a check every week. Some perhaps only once a month. How often each worker receives a check and the amount of the check of course depends on the amount of time given to the work. Each worker is free to do as much or as little each day and each week as he or she chooses. Therefore, the amount earned from week to week is in each worker's own hands.

For All Who Want To Have More Money

Some of the many spare-time home-workers who are getting checks every week or so are busy housewives—perhaps with only a few hours a week that they can use for this purpose. Some are school teachers—using their free time after school and holidays. Some are young women who choose to earn money at home instead of taking a place in an office or factory. And some are men.

A few give all their time to this work—finding it more profitable than anything else they can do.

Some live on farms, some in small towns, some in large cities—where one happens to live makes no difference, whatever.

Some have taken up this spare-time work so they can have more clothes, or new furniture, or live better. Some to help pay for a home. Some to get out of debt. Some to help send a son or daughter to college. Some to build up their bank accounts. Some to buy books. Some to provide for long-awaited trips. Some to have more amusement. One woman uses the money she earns this way to help keep a maid—says it is easier and more interesting to knit socks on the Home Profit Knitter than to do the housework herself. Another woman earns money this way so she can afford to send her washing out instead of doing it herself. No matter what the money may be wanted for, here is a pleasant way to earn it.

The Rate of Pay is Guaranteed

One doesn't have to know a single thing about knitting to take up this work. Complete instructions that make everything plain and clear come with the Knitter. With practice, anyone who follows directions—anyone who really wants to learn money instead of merely wishing for it, anyone who is willing to make a little effort and do her part—can soon be turning out perfect socks—and he will be paid for every pair.

The pay is sure. The Home Profit Hosiery Company guarantees to take every pair of socks you knit on a Home Profit Knitter in accordance with our simple instructions, and guarantees to pay you a fixed price for each pair as fast as you finish them and send them in. There is a big and steady year-around demand for genuine home-knit wool socks, and the Home Profit Hosiery Company wants all it can get. But if preferred, you have the privilege of selling part or all of the socks you knit direct to friends or neighbors or local stores at your own price, instead of sending the socks to us.

Extra Money for Any Purpose You Wish

Whether large or small, every one of these home-worker's checks is earned in free time—time that might otherwise

be frittered away with nothing to show for it. Thus each check means just that much extra for the person receiving it—extra money for more clothes; extra money for the savings bank, or to pay debts, or to help pay for a home; extra money to help out in any way one wishes.

The way these people earn their checks is by knitting wool socks on our famous Home Profit Knitter—a simple yet amazingly skillful little knitting machine for home use that is many times faster than hand-knitting. That's why this work pays so well.

Fast or slow,

The Master Knitter

The Home Profit Knitter contains many features and improvements never before seen in any home knitting machine. We guarantee that after a little practice you can do perfect work on it, simply by following our plain and clear instructions.

The Home Profit Knitter has a portable stand, and can be picked up and carried from room to room and used anywhere in the house. It is the Master Machine of all knitters.

I Want to Start More Home Workers

Right now the Home Profit Hosiery Company wants at least a thousand more home workers. If you have been wishing you had more money coming in—if you want money for any purpose—then here is your chance. All you need is a Home Profit Knitter and a little spare time—and the willingness to use it. How much you earn will be in direct proportion to how much time and effort you give the work. You can spend as much or as little time at it each day and each week as you choose. You are always "your own boss." Moreover, other members of the family can take turns with you and help you along—for with practice almost anyone can knit socks on the Home Profit Knitter. And whether you knit a dozen or more pairs every day or only a dozen in a week or month, you can be sure of good pay for all the finished work you send us.

In fairness to yourself and your pocketbook, at least let me send you full information about this spare-time home work plan that is bringing in extra money for so many others. That won't cost you anything. Yet it can easily make a vast difference in your life—it can easily mean hundreds of dollars a year to you. Simply fill out and mail the coupon at the bottom of this page—and it's a good idea to do it now—before you forget about it.

Home Profit Hosiery Co., Inc.

Dept. 49, 872 Hudson Avenue Rochester, N. Y.

HOME PROFIT HOSIERY CO., Inc.

PRETTY SPRING STYLES FOR ALL THE FAMILY

No. 9902 shows a dress for the tiny girl. It has a quaint fichu collar, lace-edged, and tying with a bow in back. Dotted swiss or dimity launder easily and look very sweet. No. 9902 comes in sizes 2, 4, 6 and 8 years. Size 4 takes $1\frac{1}{2}$ yards, 30 inch, with $\frac{1}{2}$ yard for fichu and 2 yards ruffling. Price 12c.

Separate blouses are back in style. Slip-overs are favorites, in Egyptian, oriental and peasant fabrics, for surely Joseph's coat was never so gay as the new spring blouses. No. 1640 cuts in sizes 34, 36, 38, 40, 42 and 44 bust. Size 36 requires 2 $\frac{1}{2}$ yards 36-inch material, 2 $\frac{1}{2}$ yards binding. Send 12c in stamps for this clever new pattern.

A slip-on dress with pleated side panels is No. 1677. The sleeves can be made long or short and the collar and cuffs of self—or contrasting material. Gingham, linen or jersey are good materials. No. 1677 comes in sizes 8, 10, 12 and 14 years. Size 8 requires 2 $\frac{3}{4}$ yards 36-inch material. The dress could be made in gingham for about 75c. Price of pattern, 12c.

Made with kimono sleeves and with closing at left side front is this smart little junior frock. The odd long collar, belt arranged in panel style and long sleeve attachment if desired, all make this frock unusually smart for school or Sunday wear. No. 1715 cuts in 8, 10, 12 and 14 years. Size 8 requires 2 $\frac{3}{4}$ yards 36-inch with $\frac{5}{8}$ yard contrasting. Price 12c.

Slenderizing lines are sought by every woman with an ample figure, and No. 1611 has unusually good features. The collar is becoming, the side panels continue the line, and then the uneven edge also carries the eye down. Either fitted or loose sleeves may be worn. No. 1611 comes in sizes 36, 38, 40, 42, 44, 46, 48 and 50-bust measure. Size 36 requires 5 $\frac{1}{2}$ yards 40-inch material with 12 yards braid. Pattern, 12c.

Simple and inexpensive to make is this indoor dress. The three-piece skirt gathers at the back and is attached to the waist. The dress has a front closing, long or short sleeves and large patch pockets.

No. 1636 comes in sizes 34, 36, 38, 40, 42 and 44-bust measure. Size 36 requires 3 $\frac{1}{2}$ yards 36-inch material with $\frac{1}{2}$ yard contrasting. Price 12c.

To order, enclose correct amount (preferably in stamps). Write name, address and numbers clearly, and send to Fashion Department, American Agriculturist 461-4th Ave., New York City.

If you want our big new spring catalogue, enclose 10c more.

Reviewing the Latest Eastern Markets

MARKET AWAITS WOOL CLIP

WITH the domestic wool-clip shortly to come into the market, it is not surprising to see the general tone of the raw-wool market somewhat unsettled. Active consumption of wool in this country and abroad has stimulated the market for weeks, although the large turnover of stocks recently has weakened prices on foreign markets. The general view, however, is one of potential demand, and trade gossip on a large American clip now at hand does not indicate that prices should ease off except temporarily during the spring season. Country-point information, particularly from the West, states that contrasting on this season's fleeces is widespread, but only upon a small proportion of the production in most of the wool-producing sections. In mid-March, the feeling was generally one of quiet optimism on the 1923 clip.

POTATO MARKET ACTIVE

An excited potato market developed due to car-shortage, bad roads and light stocks in the city markets. Prices jumped from \$2.25 per 150-lb. sack de-

high as 45 to 47c. It has been many years since brown eggs sold for more than whites on the New York market, as they did last week.

At this time last year the egg market was very weak, and extra fancy nearby whites were quoted at only 33 to 36c, with fancy hennerly browns at 26 to 27c.

DRESSED POULTRY OUTLOOK

From January 1 up to March 7 receipts of dressed poultry in the four largest markets were 69,973,874 lbs., compared with 40,504,094 lbs. in the same period last year. The amount of dressed poultry on hand in the four largest markets on March 7 was over 17,000,000 lbs. in excess of the quantity on hand at the same time last year. It is reported that the quantity of poultry on farms this year is much larger than a year ago, which will probably result in larger shipments of fresh poultry. The peak of the storage holdings was reached last year about the middle of January, but this year stocks continued to pile up in storage until February 10, when the peak was reached.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on March 9:

livered New York City to \$2.50. Some shippers quoted as high as \$2.90 in carlots.

In the yards, States sold from \$2.50 to \$3 per 150-lb. sack, depending upon quality and condition. Arrivals were light. It is the general opinion that if the car shortage continues and the hauling is bad, prices will hold steady.

APPLES HOLD STEADY

At this time last year best A grade Baldwins were selling wholesale at \$7.50 to \$7.75, compared with \$5.25 per bbl. last week. Greenings, best, A grade, last year at this time brought \$11 to \$11.50, compared with \$5 to \$5.25 now. Carlot shipments of barreled apples in entire country to March 3 were 57,605, compared with 29,020 last year to that date.

EGG MARKET UNSETTLED

Cold weather and storms delayed the normal seasonal increase of shipments of eggs last week, and receipts at New York were actually lower than the previous week. This resulted in holding prices up, and for several days Western brown and mixed-color eggs were so scarce that many sales of them were made above quotations. Because of the heavier shipments now in transit, the break will undoubtedly come before you read this page. Many in the market believe that prices will hold up fairly well till after April 1, however, because of the early Easter and the Jewish Passover demand.

Nearby white eggs showed some increase in volume, but moved fairly well. Most State eggs sold around 41 to 43 1/2c, but finest Jerseys went as

Since February 10 the withdrawals have not been sufficient to reduce the excess over last year.

It is encouraging, however, that the consumption of poultry seems to have considerably increased, and there is some demand for our poultry in British markets.

Live broilers have been arriving in small lots from Long Island, Pennsylvania, Boston and Virginia.

BUTTER OUTLOOK GOOD

Owing to heavier receipts, prices declined last week, but on March 8 the market closed firmer owing to information that new arrivals were falling off as increased buying on the part of chain stores and other large organizations.

At this time last year, creamery extras sold wholesale at 37 to 37 1/2c, compared with 47c per lb. on March 8 this year.

CASH GRAIN QUOTATIONS

The following were cash grain prices at New York March 9:

No. 2 hard winter, \$1.32 1/2; No. 2 mixed durum, \$1.23 1/2; No. 2 yellow corn, 91 1/2c; No. 2 mixed corn, 91 1/2c; No. 2 white oats, 56c; rye, 93 1/2c; barley, 81 @ 82c; buckwheat, \$1.92 @ 2.10. At Chicago: No. 2 hard wheat, \$1.19 @ 1.19 1/2; No. 2 yellow corn, 74 1/4 @ 74 1/2c; No. 2 white oats, 45 3/4 @ 46 1/2; rye, 81 1/2c; barley, 68 @ 71c.

CHOICE DRESSED CALVES SCARCE

Supplies of country-dressed calves increased last week, and double receipts are expected from now on. Fresh, choice calves are scarce and in demand, but trade for ordinary grades is only moderate. Stall calves sold at irregular prices. On March 8 fresh

receipts per lb., choice, sold at 18c; prime, 16 @ 17c; good, 14 @ 15c; medium, 11 @ 13c; small or common, 6 @ 10c; hind saddles, with skins, 16 @ 20c; without skins, 18 @ 22c.

FEED PRICES CHANGE SLIGHTLY

The Buffalo feed market was dull last week, with slight declines in a number of commodities. Prices on carlots f. o. b. Buffalo in 100-lb. sacks March 7, were:

Gluten feed, \$46.55; cottonseed meal, 36 per cent, \$47.25; oil meal, 33 to 34 per cent, \$49; standard spring bran, \$34.75; hard winter bran, \$35.75; standard spring middlings, \$34.75; choice flour middlings, \$36.25.

LOWER GRADE HAY DECLINES

Receipts of hay considerably increased last week, but most of the shipments from New York State were under grade. Prices declined to a moderate extent on these undergrades, but top grades are still comparatively scarce.

Railroads have issued more permits, and unless weather conditions in the country hold up the movement, the New York market will be well supplied within the next two weeks.

MINERALIZED WATER ROUTS CHICKEN LICE

**Tablets Dropped Into Drinking Fountains
Banish Vermin, Make Fowls Grow
Faster and Increase Egg Yield**

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water,

all lice and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big \$1 packages for only \$1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 889, 1100 Coca Cola Bldg., Kansas City, Mo., and the two \$1 packages, enough for 100 gallons of water, will be mailed. Pay the postman \$1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.

There are big days, and happy days when your family and your friends sit down to your fine big dinners. Picture your pleasure in having for such occasions a Dinner Set like this: pure, gleaming, flawless white, edged with a smooth, bright, shining gold line, gold handles, and a dainty lower band of colorful orange. Then think of the added satisfaction of this distinctive feature: **Your Own Initial on Each and Every Piece.** Each initial set in an artistic wreath which is backed by a charming scroll of roses in beautiful colors. This illustration does not begin to do it justice.

Martha Washington Colonial Shape Initial Dinner Set

No picture, no description can do justice to this exceedingly beautiful dinner set. I want you to see it on your own table. I want you to know the Attractiveness of its Aristocratic Martha Washington Colonial Shape, the Beauty of its Gold Border. I want you to see with your own eyes how the big, wide, gorgeously brilliant gold handles enliven, enrich and beautify the set. Then I want you to know the Pride of Possessing a big, fine, high-class dinner set that has your initial on each and every piece. So, I will gladly send you the entire set, 110 Pieces, on 30 days' Free Trial. The picture above shows, in reduced size, the attractive initial design. This design is in 6 harmoniously blended colors.

SUPREME QUALITY. Only the very best materials are used in the manufacture of these dishes. Extreme care is taken in all of the different operations. Everything that high class materials, manufacturing skill, art and design can do, has been done to make this beautiful Dinnerware a Remarkable Bargain. All of the decorations; the initial, the wreath, the scroll of roses in natural colors, the gold edge, and the inner line of orange, are absolutely put on to stay. We guarantee against breakage in shipment. Each piece is wrapped separately in tissue paper.

30 Days' Free Trial—Easy Monthly Payments

**"I Will Trust
You Gladly"**

Spear
of Pittsburgh

Only a short time ago this dinner set sold for \$44.75 and without the Free Table Cloth and Napkins. You would have been satisfied to pay this price for the High Quality and Exquisite Design alone. To these points of excellence I have added these additional attractive features: The exclusiveness of your own initial on every piece; the glorious, cheerful, lavish beauty of Six colors and Gold in the decorations; the outstanding and distinctively handsome big, wide, bright, gold handles. I have also added a daintily colored floral spray which is opposite the initial design on each and every piece. I want to send you the complete set, 110 pieces, on 30 Days' Free Trial. I want you to use the dinnerware as if it were your own. If your satisfaction is not complete, return the set. I will refund your first payment and all freight charges. The trial will not cost you a penny. Be careful to state the initial you desire. Order No. PA2940. Terms: \$1.00 with order, \$2.50 Monthly. Total Price, \$29.95.

5 CENTS A WEEK

Some Doctor!

The Relation of Lime to Farm Prosperity—By J. C. Conway

To more than four million homes
this book brings a saving

This book is saving millions of dollars for the American people

Are you using this Book? Is it saving money for *you and your family*?

Are you taking full advantage of the opportunity for saving it brings into your home?

Do you consult this Book—this price guide—*every week* to find the lowest price for everything you buy?

It will save you many dollars on your needs, on your family's needs, if you *use it*. It will give you the lowest price on goods of standard quality—*always*.

Millions Buy from this Book on Faith in the Name Montgomery Ward

For Fifty Years, Montgomery Ward has been selling only goods of Standard, Serviceable quality. The American people have learned by fifty years' experience that they can trust Ward's and that Ward's prices are as low as *absolutely reliable goods can be bought*.

For Fifty Years, we have kept faith

with the public. We never sacrifice quality to make a *seemingly* low price. We make no price baits by offering goods of inferior quality. We quote the lowest possible prices—but always on the kind of merchandise that stands *examination and use*.

Buy from this Book— Use it Every Week

This Book is of value to you only if you get the habit of using it every week. It will save you money *only if*

Your Orders Shipped Within 48 hours

Our new system of filling orders is now six months old. Six months' successful operation enables us to say—Your Order will be shipped promptly; certainly in less than 48 hours.

As a matter of fact, most orders are now being shipped the same day they are received.

With the lowest market prices, goods always of Ward Quality, and the most prompt and accurate service, it is true indeed that: "Montgomery Ward & Co., the Oldest Mail Order House is Today the Most Progressive."

you use it. And, then it will bring into your home a great satisfaction and a large saving.

It will bring you the advantage of always getting dependable goods. It will insure your getting prompt, courteous service. It will insure your always buying at the lowest price.

Montgomery Ward & Co. is the oldest mail order house—the originator of selling goods by mail. Yet, never in our Fifty Years' history has this organization been so capable of serving you well, so filled with the spirit of youth, of progress and so alert to give you satisfactory service and lower and lower prices.

Buy from this Book. Fill all your needs from this Book—everything for the Family, the Home and the Farm. Consult it daily to find the right price; the lowest price for dependable goods of standard quality.

The Relation of Lime to Farm Prosperity

A Story of a Professor Who Would Talk Lime But Not Sell It

IN the spring of 1911, I was able, by an unusual stroke of luck, to sell my farm, located in a hilly township of Northeastern Pennsylvania. Moving to the village I bought the stock and good will of a dealer in fertilizers and general farm supplies, and entered on what I had previously supposed to be the unobstructed career of a profiteering middleman. The stock on hand at the time of my purchase of the business was not of any great account, consisting mainly of a few shop-worn farm tools and perhaps five tons of commercial fertilizers of various mixtures and conditions of bag-rot and ossification. I soon found, also, that the good will of the trade was not to be seriously depended on, and although in the course of the eight years that followed I made a moderate success, it was done at the cost of as stubborn a struggle as was ever carried on with a mortgage-encumbered farm.

The Retailers Problem Hits Home

The experience has given me an understanding of the problems and the economic value of the retail merchant which differs from the notions I entertained previous to engaging in this enterprise. I will say that I honestly believe Credit to be the great curse of rural business. I am strongly of the opinion that it would be best for all concerned if it were made impossible for any man to buy a load of feed or a ton of fertilizer on any other terms than cash on the spot.

In my first season at the work I was considerably interested in the fertilizer trade, and soon discovered that my business in this line could only be increased by actual farm-to-farm canvassing and the securing of signed orders. In connection with this I could, if I had the ability, write a long and interesting book on the various schemes and complicated tactics employed in persuading the farmer to actually sign his John Hancock at the bottom of an order sheet. His attitude in regard to the matter was one of extreme procrastination. He would "drop in and see me later," or promise to "come down in a few days," when he had figured out just what he wanted.

Promises Mean Nothing

Very early in the game I learned to discount these promises heavily, because as a matter of fact if I went away without closing a deal I would not, in 90 cases out of a 100, ever hear from my friend again in regard to the subject. This was not because the average farm-

By J. C. CONWAY

er's word was of little value. It was simply a part of an interesting and entirely legitimate game, entitled "getting rid of an agent."

There was one agent-routing argument that I found especially hard to get around. "No, I don't want any phosphate," said the farmer, "but if you would come along selling

Easier Than by Hand, and More Uniform

lime I'd have an order for you. Lime is what we need." This statement blocked my path again and again, and being of an accommodating and adaptive turn of mind I resolved that if they wanted lime, lime I would sell them. Accordingly I began an exhaustive correspondence—at least it was exhaustive to me—with lime-producing companies, agricultural colleges and experiment stations, in a search for the true Philosopher's Stone of soil-sweetening. These literary efforts were carried on intermittently through a period of several years, and supplemented by personal observation of the effects of various kinds of lime on the soils of my section, and eventu-

ally I came to consider myself something of an expert. When I sold out in 1919, I had built up a trade averaging better than 100 carloads per year, shipped into my own and three or four nearby stations, and consisting almost exclusively of ground limestone.

I think it was in the second season of my canvassing that a lime company with which I had corresponded, sent to my assistance an expert agronomist. This old gentleman was, as a matter of fact, an agricultural college professor whom they had engaged during his summer vacation to talk lime to the farmers. The old agronomist was not much of a salesman; in fact I think he had stipulated with the company that his mission was to be only that of an educator, but he certainly was the ablest assistant I ever traveled with.

A Salesman of a Different School

In his little lectures he removed the subject entirely from the plane of commercialism, and elevated it to that of soil improvement and farm prosperity. He rode with me from early morning to late evening for three days, and in that time I took orders for better than twenty carloads of lime for subsequent delivery.

Professor Jones, as we will call him, did the talking, and when he had finished I was right on hand with the order book. I will attempt to give a conversation between him and a farmer, touching upon the most-discussed points of the lime question:

"Good morning," I used to say. "This is Professor Jones, who works for the so- and-so lime company."

"What kind of lime are you selling?" asked the farmer.

"Not any kind," replied the professor. "I am merely explaining its value. However if you wish to purchase some, Mr. Conway will, I believe, take your order for whatever you wish. Have you used any?"

"Yes, I put half a ton on two acres of seeding last year. It didn't show much results."

"Lime is Not Fertilizer"

"Many farmers," said the professor, "make the mistake of thinking that lime is a fertilizer, and should be used in amounts approximating those of a fertilizer application. It is a soil element, and where deficient should be returned to the soil at the rate of one to two tons per acre, in the ground limestone or carbonate form, or quantities of equal lime value in the burnt or oxide form. On lands as badly soured down

Lime Did It

An Eastern Apple Show

PLANS are being made to hold a great Eastern Apple Exposition and Fruit Show at the Grand Central Palace, New York City, from November 3 to 10, 1923. The Show will be representative of the fruit products of all of the Eastern States, southward to North Carolina, and will have the backing of fruit producers and their organizations, of the State Agricultural Departments, and of fruit handlers. All of those, in fact, interested in growing, transporting and marketing the products of one of agriculture's greatest industries are expected to help make a really great exhibit.

Such a show will do much to advertise the fine quality of Eastern grown apples and other fruit products. Although Western producers' fruit is of no better quality, and although they are much farther from the great markets, yet they have been able because of better advertising and marketing to outsell the Eastern producers who have the best markets near at hand. Therefore, we think this exposition is a step in the right direction, and we hope that it will receive full and unqualified support from everybody concerned.

Lime Is Fundamental

WE once put in several weary days one summer mowing clover with a scythe in a field that was so filled with stumps and stones that a mowing machine could not be used. Never before, or since, have we seen clover that grew as rank and as high as it did on that piece of virgin soil. Yet to-day, twenty years afterwards, we will wager that there is no clover growing there, for such has been the history of nearly all hill lands of the East that were not underlaid with limestone.

Our forefathers in these Eastern States grew stands of clover almost without effort.

The fertility of the land had not been exhausted and most of it had a little trace of limestone in it. But later our fathers found that for some reason which they did not understand, it was very difficult to get and maintain a stand of clover on the hill, or even the valley, farms of the East.

How clovers have been brought back to stay by using lime is well told in the feature story by Mr. Conway in this issue. Don't miss it.

Many times it is lime and not fertilizer that the soil needs, and many times the fertilizer is much more effective if the soil has had its proper feeding of lime. Limestone is the wizard of agriculture. We believe the practice of applying it is fundamental to our Eastern farming, for with it old soils have been made to renew their youth and blossom again like a rose, and with it a new agriculture can be built with the clover and other legumes grown again as our forefathers grew them when the soil was young.

Committee To Find TB Control Plan

THIS paper announced last week the appointment by the New York State Farm Bureau Federation of a competent committee to make a study of different methods for handling tuberculosis among dairy cattle and to make recommendations for more rapid eradication of the great scourge.

The committee has already begun its work, and one of the first things it did was to draft a resolution calling upon the Legislature for adequate appropriations to finance future eradication work. We were particularly pleased to see this resolution because American Agriculturist had already taken the position that appropriations for eradication work should be made in advance and not come dragging along months after the obligations by the State had been incurred.

Although a tremendous amount of work has been done toward controlling tuberculosis in dairy cattle, yet a start toward the great task has only been made, and there is much difference of opinion as to just what is the best method of procedure.

The committee appointed is made up of men of long practical and first hand experience with the tuberculosis problem. They have a big job cut out for them, but if they can outline a plan, and we think they can, that will hasten the control of this dreaded disease, dairymen will be rendered an immeasurable service.

The Spring Light

IF farming does not pay why do farmers stay at it? There are many answers to this question so often asked by city folks. The basis of the question is wrong in the first place, because the great trend of population from country to city in the last few years shows that farmers are not staying in the business. But the chief reason why many farm people do stay on year after year and from generation to generation in the hard business of getting an existence from the soil is the compensations that come to country people that money cannot buy. It is possible to make a home on the land, the like of which cannot be maintained in the city. A farm is the best place in the world to grow children. Then, there are rewards hard to describe and not often talked about, but nevertheless enjoyed, that those who live in the country constantly get from nature and the passing seasons.

There is for instance that feeling of coming spring that only a farmer can appreciate which comes when the days begin to grow longer in the winter time. To be sure it is true that "when the days begin to lengthen the cold begins to strengthen," but even so the lengthening days arouses that intangible

something in every countryman, which makes "hope spring eternal in the human heart" and makes us all impatient to get busy with the spring work in the hope that in spite of experiences of past years, *this year* is going to be the year of years when things are going to be different and better.

So, along about February or March the wind howls across the bleak hills, piling the snow in drifts so large that it would seem they will never melt. The trees are leafless and apparently dead. The brooks are frozen and the birds are gone. But all the same at the close of day there comes a few moments of promise when the "spring light" shows in the western sky, telling us that the sun is on its way, that the snow will soon be gone and that the miracle of the annual resurrection is soon to come, transforming a cheerless countryside into a blooming paradise.

Immigration and Our Increase

THE New York "Sun" says that the day is coming when humanity will be as crowded for elbow room in America as it now is in Europe. In 1920 the population of continental United States was 105 million. Three years later it was 110 million. "The elimination of famine, the conquest of disease, the increase of health measures, and the other victories of medicine mean benefits to this generation, but may become old men of the sea a generation from to-day.

Without doubt the "Sun" is right. Yet, in spite of these facts, there are many who insist on throwing the immigration gates wide open, thereby hastening the day when the further progress of the country will be greatly impeded by overpopulation.

A Home or a Place to Stay

A CORRESPONDENT writes that in a trip of some length through farming sections he is impressed with the bleak and barren surroundings of many farmhouses. He says further that a little time and attention given to the planting of trees, to the proper placing of some quick-growing shrubbery, and to a good lawn would make the difference between just a place to stay and a real home. In speaking on the same subject, another farmer recently stated that farmers would like to do such things, but they did not have time because they were too busy trying to make a living.

There is, of course, still much opportunity for improving and beautifying the farmstead, but when we look back over twenty-five years and notice the changes that have taken place we think that farmers have come along this way pretty fast. We remember one valley twenty-five years ago where a mowed lawn, a cared-for bush or shrub or a pretty flower bed was something of a curiosity. To-day there is hardly a farm in that valley that does not have a pretty lawn, with prettily arranged flowers and shrubbery, and well-painted buildings.

On the other hand, as one gets back a little from the main-traveled roads, many, if not a majority, of the farmsteads are bleak and cheerless. There are also fairly prosperous farm communities where little attention has been given to improving appearances. It seems to be something where good example is especially powerful for two or three farmers in a neighborhood who start to improve their surroundings are soon followed by most of their neighbors.

As to getting the time for work of this kind, it does not take much, and it greatly increases the value of the property. Besides, we think most farmers would be better off if they took just a little less time from working to crowd a surplus market to the limit and just a little more time to do some of the things that would make life more pleasant.

Those Were the Good Old Days

But It Is About Time Some of the Younger Generation Spoke Up

AFTER reading the article in the February 3 issue, by Alexander Legge, "Eighty Years With Farm Machinery," I have been prompted to write an article very closely related, and yet along a different line.

I wish I could take the reader back to the rural home of 75 to 100 years ago. The majority of your readers will hardly believe that there has been the change in 75 years that has actually come to pass. I can write with authority because I can remember a grandmother who was born in 1785 and died in 1876. We have living close beside us, a lady who was 83 years old last October, who has told us much about the home of her childhood days.

I will not dare try to mention more than a few changes, for it would make too long an article.

The lady I have mentioned can remember well when the first cook stove came into their community. Neighbors went for miles to see that cook stove and soon another and then another bought a cook stove. I wonder how many would be able to get along without the match, and yet that is what our grandmothers and some of our mothers yet living had to do. The fire on the hearth had to be carefully banked and, if in spite of care, the coals all burned out, it required either a trip to a neighbor to get one of his coals, or else resort to the steel and flint.

A few of your readers may remember the flint-lock gun, and some may remember seeing old smokers who lit their pipes with the steel and flint and punk. Punk was rather slow in getting a blaze, so many would use gun powder.

Like the Oil Stove of To-day

And right here I must mention again the lady I have already mentioned. When a small baby, her mother placed her on the floor, took the powder horn and poured a little powder on the floor, laid the powder horn down, not far enough away, placed paper beside the little pile of powder and struck her steel against the flint so as to throw a spark into the gun powder. The fire spit out to the powder horn, which flew against the side of the room and bounded from there to the baby, covering her with fire. The mother had her arms badly burned in putting out the fire and the baby was not expected to live. Even after getting better, it was thought she would be blind; but though she carries marks of the burning, her eyes were not injured.

Though no one ever thought of, or even heard of, buying ready-made clothing, there was no sewing machine in the home of that period. And furthermore, not much of the cloth for clothes was bought, but flax was sowed and, when ripe, was pulled and bunched. When dry enough, the seed was flailed off and the bunches then spread out to be watered by the rains, or if rains were not plentiful enough, water had to be carried on to it until the boon or core became brittle, when it had to be broken up into little bits over the breakers.

These bits of stem had to be skutched and hackled out of the fiber, which had to be hackled and hackled until the finest, known as tow, was spun by the mother into fine thread on the spinning wheel, which was found in nearly every home. This was then taken to some one who had a loom and woven into cloth for dresses, shirts, pants, bedding, etc. The coarser fiber was spun into coarser thread and used in coarser cloth and carpet fillings, etc. This, of course, did not supply all the cloth. Sheep were raised and flannels, stocking yarn and carpet chain made from the wool. Almost every housewife,

with her daughters, when she had any, made all the stockings for the family. And this just reminds me that my father made all the shoes for his family for many years.

I have had to omit many details in the foregoing, but I have written enough to show the reader that there were no idle days for the home makers of 75 or 100 years ago. Do you wonder that among such a busy population, there was not found the flagrant evils that exist to-day? True, none of us wish to go back to the inconveniences of those years, but oh, how we do long for the pure Christian home so typical of those simple busy folk. Of all the needs of a trouble-racked world, there is none so great as the need of true Christian homes.—D. P. HECKMAN, Newville, Pa.

Ministers of Bygone Days

OWING to the scarcity of labor, and the vast amount of work to be done at every farm home, I find less time to read than in former years. Consequently, I have thought it best to discontinue some of my papers. Never have I entertained a similar thought in regard to your paper. Its pages are filled with interesting matter, written by those who know what to say and how to say it. Therefore, I can only say: "Let 'er come!"

The article, "Where Have Men Like This Gone", by Jared Van Wagenen, Jr., was very interesting. He is certainly one of the best of writers. We shall not soon forget the earnestness, the consecrated devotion, and untiring efforts of the many ministers of bygone days. How they toiled and plodded through deep snows and freezing weather to the little school house miles away among the hills. Here, revivals were held, night after night, with good results which will never be forgotten.

We who have already lived the three score years, well remember that half a century ago, in most families there were from four to eight children. These children, early in life, learned to share not only the joys, but all their sorrows and troubles with each other. The discipline was good. The care which came to them early in life helped to give them strength of character and thoughtfulness for one another. Then there were boys for the ministry, boys for lawyers, some for doctors, and some for blacksmiths. When mother was sick and unable to care for her large family, if no girls of suitable age were there, one large boy could drive over to the home of another farmer and bring in a strong girl, who was willing to come and help out with the housework for a time, for a fair wage per week.

American people have sadly neglected the child crop for many years. As an example: My grandparents raised thirteen children. My parents raised six. Wife and I have raised three. The next generation has one or none at all. Is it any wonder that there is no one to fill the useful positions in life any longer?

Other Good Preachers of Bygone Days

One good old pastor, the Rev. L. R. Swinney, of De Ruyter, N. Y., had gone to bed one very cold night, but he kept thinking of a poor family living at some distance. So he dressed and went to the home of this family, taking a bed quilt for them that he might know that they were comfortable. Another good preacher, the Rev. J. M. Todd, preached for our people at Brookfield for 30 years. He finally said he was not weary of the work, but was weary in it. His was a life of kindness and thoughtfulness for others, being entirely free from hatred and sarcasm.

Mighty good man I remember was the Rev. W. C. Byrer of Unadilla Forks. He used to come over the hill and preach to us sometimes. As an example of how we should live, he said: "There were two farmers who were brothers, living side by side. Both were poor men. There came a year when crops were very poor. One man was thinking of his brother and his large family and wondering how he would get through the coming winter. So he said to himself, 'Now to-night I'll go down to the wheat field and put some of my shocks of grain over the fence in my brother's field, then when he comes to draw home his grain, he will have a little more.' At the same time, the other farmer was thinking of his brother in the same way. So these two men met down in the field, just at dusk, each trying to put some of his wheat over the fence in his brother's field. In grateful memory of these beloved and consecrated men of God, who have long since gone to a just reward, let us reverently say:

Tenderly, tearfully lay them away,
To them comes no anguish,
No cold bitter day.

No hatred, no envy,
No strife and no sin,
Their present condition
We all, yet, must win.

For the friends we once had
Who have passed from our view,
For the deeds they have done
For the lessons they knew.

We will ever give thanks,
And while here humbly bow,
Trusting all will be clear
That we question just now.

—L. P. BURDICK, Brookfield, N. Y.

A Boost For Wayne County

I THINK that the records show that Wayne County is the banner county for long term subscribers of any county in the State, also for winning the first prize at the New York State Fair for the best display of fruit of any county in the State in 1922, which I think was through the efforts of L. J. Sweezey, President, and E. R. Wagner, Manager, of the Wayne County Farm Bureau, which looked after the spraying, sending out letters to all of the members what to use and when to spray to get the best results. Farmers are busy at present who have timber lots, getting bolts cut for crates. Celery takes a great many crates each year as they are never used but once, and most of the crate factories are kept busy making crates for the muck farmers as most of them use a great many crates.

Years ago before there was so much under cultivation, Wayne County grew and distilled about all of the peppermint oil in the United States or the world, and it was all sold to two buyers at Lyons and shipped all over the world. In those days a farmer used to work all summer, and in the fall draw away all that he raised for a money crop which was mint oil in a democrat wagon at one load to Lyons and bring back several hundred dollars. Since the days of license when barley was used for malting, some farmers grew barley for a money crop, but barley is not raised now much and only for feed. Red beans are now raised mostly by all the farmers on grain farms as a money crop and the town of Marion is said by all of the buyers to produce the best beans raised in Wayne County.

Marion is an inland town and all of the produce bought years ago was beans and dried apples. They were then drawn by

(Continued on page 273)

WHY YOU SHOULD PLANT DIBBLE'S FARM SEEDS

1. **Because** Dibble's Seeds are better Seeds for less money.
2. **Every member** of the Dibble Company is a practical farmer, one of them with over a third century's experience in Seed-growing.
3. **There are over 1,000 acres in the Dibble Seed Farms**, comprising some of the choicest farming lands in the far-famed Genesee Valley, **and they ship from their Farms to yours.**
4. **The Warehouses, Elevator and Storage Houses**, 400 feet in length, with a capacity of around 100,000 bushels, located on private switches, are owned and paid for. Seed Houses of similar capacity located in our leading cities on the best business streets would rent for at least \$50,000 yearly. You save this enormous rental charge in buying direct.
5. **The Dibble Farm Seed Business** is established in the little village of Honeoye Falls, right **in the heart of the best seed-growing district of the Empire State.** This means, as nearly as possible, eliminating middlemen, cutting out heavy freight charges, no drayage or cartage expense, and saving **you** money every time.
6. **Dibble's Farm Seeds are tested in our own laboratory** by a graduate seed analyst who is a member of our firm, and every bag of Alfalfa, Clover, Timothy, Corn, Oats, Barley, etc., is tagged, showing our purity and germination test, also the month in which the test was made. We were pioneers in giving this service to our customers, long before the state seed laws made it compulsory.
7. **In buying Dibble's Farm Seeds, you are assured of getting the highest grade obtainable.** Take Alfalfa, Clover and Grass Seed for instance. There are five grades of these seeds, each above 97 per cent purity which will conform to the New York laws. Dibble never buys nor handles but just one quality—the best money will buy.
8. **Dibble's Farm Seeds are northern grown, full of vitality, hardy and vigorous, and adapted to the northern and eastern states.** We do not handle cheap southern or foreign seeds that are not adapted to our climate. Southern or foreign-grown Alfalfa seed is offered at several dollars less per bushel than we pay for our Northern D. B. Brand, but it will not stand our northern winters. Southern Seed Corn looks nice, grows well, but will not produce **ears** in our northern states. Hundreds of our customers have written us that **Dibble's Northern-grown Seed Potatoes have doubled their crops.**
9. **Dibble's prices are usually lower than the same quality of seed can be purchased for elsewhere,** as we have no overhead expenses, own our own Seed Farms, Warehouses, etc., have no rent to pay, and are satisfied with a just and reasonable profit.
10. In addition to surrounding our customers with every possible protection against poor seeds by buying only the highest grade obtainable and testing every lot in our own Seed Laboratory, **we sell Dibble's Farm Seeds on a ten-days' money-back-if-you-want-it guarantee,** subject to any test any customer may make or wish to have made within ten days after the seeds come into his possession.

FREIGHT PREPAID

11. If you buy 300 lbs. or more of seeds to be shipped at one time, for use on your own farm or in a neighborhood club order, we prepay the freight. Complete explanation given on page 30 of our Catalog.

BUY DIRECT—SAVE MONEY

I Visit Two Unusual Farms

Two Ways in Livestock Management in the East

DURING Farmers' Week at Ithaca, By J. VAN WAGENEN, JR. the line of irregularity in breeding and calves late one cold, blustery afternoon, I made a little visit to the farm and herd of H. E. Babcock, located in the Inlet Valley, three miles south of Ithaca. I remember calling upon his father a number of years ago, when he was a dairyman and Guernsey breeder in Chenango County. Since then the son has held a good many jobs, and made good in all of them, including Farm Bureau Manager, State Leader of Farm Bureaus, Professor of Farm Management at the New York State College of Agriculture, and now the head of the G. L. E. Exchange. But after all, I am inclined to believe that his farming is his most noteworthy achievement. By the way, it is surprising how many of the Professors in our State College are owning and working land as well. They will tell you that they are doing "a little farming on the side." Possibly some of them are farming as a business and "Professing" on the side. In any case it ought to be a source of satisfaction to us that where you find a teacher of agriculture running a farm he is usually doing a pretty good job at it. Around Ithaca the woods are full of these Farmer-Professors.

J. VAN WAGENEN, JR.

No "One Best Breed" Policy
MR. BABCOCK is surely not hide-bound or narrow-minded in his choice of a breed. In one barn where were 18 "black-and-whites" that were skillfully cared for and doing splendid work, while in another barn were a string of fawn-and-white registered Guernsey beauties that in average daily production were exceeding any stable of Channel Island cattle that I ever saw.

Remember that this farm does high-pressure dairying, and the condition of the cattle and the records being made demonstrate that there is being exercised care and skill that leave almost nothing to be desired. In the old days this farm grew tobacco—an unusual crop in our State which is now confined to two limited areas—and part of one of the tobacco barns has been utilized as a big, roomy yard for the young stock, where they run loose together. Now, I do not mean that they were "roughing it" in the usual sense.

A Sound Policy

AS a matter of fact, they had plenty of good alfalfa hay with a liberal grain ration and abundance of bedding, and they were bright-eyed and full of pep. But the building made no pretense of being tight or warm. It seemed to me so much better than standing in stanchions in a close, stuffy stable. Cattle seem to adapt themselves pretty quickly to their environment, and the yearling running half in the open thrives and grows thick-haired and lusty. But she will not look as slick as the same animal confined in a barn where it never freezes.

I believe that this idea of giving calves and yearlings their freedom just as long as possible is sound. Our grandfathers (and some few men even yet) thought that the open barnyard was the best place for a cow during at least the daylight hours. Of recent years some of us, half as a matter of better care and half as a measure of convenience, have swung to the opposite extreme, and it is at least debateable if the results have been wholly good. We have a line of cows at Hillside Farm that stand in the same stalls from November to May. Probably it is true that every time you let a cow loose you lose a little milk. On the other hand, I sometimes get a bit afraid that in the long run there may be danger in this continuous stabling, especially along

that are not as strong at birth as we could wish. This much at least is true. The cow which is tied in a stanchion for six months at a stretch is making or being compelled to make a most violent change from her ancestral habit.

Cornell students whose memory goes back to Prof. Roberts and the old red barn which stood on the ground now occupied by Bailey Auditorium will remember the covered barnyard, with the big water trough in the center where the milking herd took their ease during the daytime. The system was rather expensive for two reasons. The cost of a roof to shelter a good-sized herd is a big item in construction expense, and it certainly did require a tremendous amount of bedding to keep it dry and clean. This last fact would limit its use to those farms where a large surplus of straw was produced. On the other hand, it was a perfectly ideal method so far as the saving of manure was concerned, and it did give the cows a chance to take exercise and comfort without the shivers. I think there was no one thing which Roberts did which was so distinctive and of which he was as proud as his "covered barnyard," and Babcock is using the same system for his young stuff.

Another interesting point that I noted is this: that in the feeding of those splendidly productive animals, silage does not have the overshadowing place that it does on many farms. It is true that the farm has silos, but if I understand the owner correctly, he does not deem silage an absolute essential for successful dairying. Silage seems to be one of the minor rather than the major constituent of his roughage ration. I think I quote him correctly in saying that if he did not have the silos on hand with the capital already invested in them, he hardly thinks he would now build them. This is somewhat unorthodox, not to say revolutionary doctrine, but I have been leaning that way a little myself, so I feel more comfortable and less like a heretic after hearing him say it.

A Noteworthy Feeding Practice

AN acre of ground in good silage corn has possibilities of cattle food production unapproached by any crop known to our State's agriculture unless it be alfalfa under the most favorable conditions; but, on the other hand, silage costs a lot of labor and real money from the time we begin to plow the sod until it is safely blown into the silo. The labor costs of producing and harvesting a crop of hay are relatively insignificant. I believe that Dr. Warren—the commanding figure in Farm Management at Cornell—says that in a general way it will cost twice as much to produce a unit of nutriment in silage, as in hay. Hay, then, is a cheaper, even if not as good a source of food supply. Then, too, do we know that early cut legume hay is not fully the equal of the best silage, even in palatability!

If these conclusions are sound, then there was never a better time than now—with rising labor costs and unsatisfactory farm prices—to lay a little more emphasis on the clover meadows and let up a bit on the corn areas. I ought to add that the Babcock farm grows alfalfa rather easily. If he was located in a river valley like some I know, where corn grows very easily but alfalfa is not at home, he would probably revise his statements.

A Very Different Farm Scheme

AND on another evening, with that fine, free-handed farm hospitality which I have so often enjoyed, a Cayuga County farmer insisted that we go home with him to supper, and later he would drive us to catch the train back to Auburn.

Cayuga County, by the way, with the single exception of Herkimer County, which has it beaten, is the queerest and worst-shaped county in the State. On the north it has a little stretch of the clean sand-and-pebble beach of big Lake Ontario, and it extends south 55 miles to Summer Hill, more than half

way to the Pennsylvania line. In shape it suggests the barn planned by the city agriculturist, which was to be a half a mile long, but deciding that his finances were insufficient, he concluded to retain the original plan as to length, but to make it only ten feet wide. The county also takes in part of the Montezuma Marshes, the State's biggest swamp, famous for cat-tails and bull-heads. Some of the county, especially the southern end, is just "fair" land, but around the city of Auburn is a large area which it seems to me compares favorably with the best of the beautiful "Finger Lake Region," and it was in this fat section that our genial host lived.

Now, I do not propose to describe this farm, for the winter twilight was already advancing out of the east when the heavy farm team drove into the yard. The fertility of a region is measured to a great extent by the size of the houses because rich land ultimately blossoms into big, imposing farm homes. This particular section has many big farm houses, and this was one of the biggest. In fact, the Madam was bewailing its size and the amount of work necessary to care for it. Much of Western New York had a sunburst of prosperity almost a hundred years ago, when the Erie Canal (opened throughout its length in 1825) meant what was then deemed swift and cheap transportation to tidewater. Moreover, there was no Mississippi Valley at that time to flood the markets of the world.

A Corn-Belt Farm in New York
This particular farm has wonderfully good land—gently rolling—most of us Hill Farmers would call it very level. I notice that whether land is level or hilly depends in a great measure upon where you have been brought up. It was land where it was little trouble to grow wheat, and corn, and clover, and alfalfa, and where any normal year filled the great barns and made towering stacks of straw outside. Certainly it was notable in one respect because it was really a Corn Belt farm in New York State.

There were the great barns—bigger, probably, than the westerner would have built. There was a tremendous stack of wheat straw in the barnyard. There were the shotes and brood-sows—47 of them, he told me—not cooped up in tiny pens after our foolish eastern custom, but wandering around the barnyard among the cattle. There were draft horses in the stalls, and, most distinctive of all, there was a herd of Polled Angus cattle, fellowshipping with the hogs and burrowing into the strawstack—every one of them as black as a crow, and, except to the eyes of the master who cared for them, as alike as two peas from the same pod. O yes, I almost forgot to say that there were two or three Holstein cows, too—a sort of left-over from a one-time somewhat numerous herd. The owner told me that these black-and-whites were the best-fed animals on the farm. They were in just nice condition—nothing more—but all the Angus to the eyes of a dairyman were "hog fat," but probably they did not appear that way to a man accustomed to handling beef cattle and to seeing animals that were really fleshy, according to show-ring standards. It is surely true that in their ability to make and retain fat easily, the beef breeds and the dairy breeds are very far apart.

Beef Worth Raising
It happened that a "baby-beef"—the real article, not a skinny grasser calf—had been killed the day before, and the carcass still hung in the barn to chill. I went out and took a look at it. Now, I am accustomed to seeing farm-butch-ered dairy cows, but I am not accustomed to seeing meat like that. The light did not shine through it, even on the skirt and flank. It was an Angus steer, something more than 400 days old, that had never been hungry, and its dressed weight was quite a little more than a pound for every day of its life. I have no doubt that the folks who got the steaks from that carcass were able to cut them with a fork without trouble. It represents about the last word in tender, juicy beef. It was sold to an Auburn butcher for 15 cents per pound, a very good price as the farmer thinks of beef, and yet less than it was worth as compared with the
(Continued on page 275)

Why Worry at Hay Time?

Haying comes at the busiest season and the weather can't be controlled. For this reason haying is always a rush job. Old, out-of-date haying machinery causes a lot of worry and often means a big loss in hay spoiled.

E-B Hay Tools take all worry out of hay time. They enable you to put up your hay in the shortest possible time and with the least work. E-B Standard and Osborne Mowers and Side Delivery Rakes, Tedders, Hay Loaders and Presses have proven their value by many years of profitable work on thousands of farms.

All E-B Hay Tools fully sustain our 70-year reputation for quality products. Now is the time to look over your old machinery to decide what you will need. Don't put it off. Order early so you will be sure to be ready for hay time.

Get our **FREE BOOKLETS** on making hay the E-B way. Write us today or see your E-B dealer.

Emerson-Brantingham Implement Co.
INCORPORATED
Business Founded 1852 ROCKFORD, ILLINOIS

Controlled Cultivation Planet Jr.

A steady horse and a balanced hoe-harrow mean fast, clean work for the man between the handles. The Planet Jr. No. 8 makes cultivating a pleasure. It is the most highly developed one-horse implement you can get. The width and depth of work are always under perfect control, to be changed instantly by convenient levers within easy reach. No. 8 is a strong, stiff implement, specially braced, easy to run without having to press towards the row. The fast, thorough work it does and its strength and endurance, make it the tool for every man who knows the cash value of rapid, clean cultivation.

Other types of Planet Jr. cultivators (hand, horse, riding and tractor) and the famous Planet Jr. seeders, are detailed in the Planet Jr. catalog. Send for a copy, and name of nearest Planet Jr. agency.

How Much Shall We Apply?

A Review of the New Jersey Potato Fertilizer Tests

NEW JERSEY is now using close to \$5,000,000 worth of commercial fertilizers annually. Probably about one-half of this is spent for potato fertilizers. With the potato industry of the State demoralized as it is to-day, farmers are examining every phase of the question in a way that they have never done before. This keen interest on the part of the farmer makes the results of fertilizer tests, which have been continued for a period of years, of unusual importance. If they have been using too much fertilizer they want to know it, so that they may make a reduction in the amount and thus help to put the bank account on the right side of the balance sheet. If they have not been using enough they are equally anxious to know how much they should increase their treatments.

The experiment referred to was the outcome of a request, addressed to the Director of the Experiment Station early in 1917, from growers in the vicinity of Elmer and Woodstown, for more definite information as to the best sources of nitrogen for potato fertilizers.

Located on Typical Potato Soil

After careful consideration the experiment was located on the farm of J. Harry Kandle, about 4 miles south of Elmer. The soil is a typical Sassafras loam of good quality, and is thus representative of much of the potato land of the State. The plots were laid out and the first crop—cobblers—grown in 1917. Potatoes have been grown each season since, on the same plots, and for a given plot the fertilizer treatment has remained the same. In this way it has been possible to observe the residual as well as the initial effects of the fertilizers.

In addition to a study of the question with reference to the best sources of nitrogen, the experiment includes a trial of different amounts of a standard fertilizer—4-8-3—ranging from 800 to 2,800 pounds per acre, in 400-pound steps; a comparison of 1,600 pounds per acre of a 4-8-0, 4-8-3, 4-8-6, 4-8-10, and a 4-8-0 with an initial application of greensand and marl at the rate of 2½ tons to the acre. Four check plots (no fertilizer) and 5 check rows were distributed over the block. One plot receives 1,600 pounds of a 4-8-0 with an initial application of ground limestone at the rate of two tons per acre and one plot an initial application of ground limestone only.

The plots are 1/100 acre in size and the treatments are repeated, that is, plots 1 to 24 constitute one section and plots 25 to 48 another on which the fertilizer treatment is repeated. Fertilizers are applied annually at the time of planting potatoes. After the potatoes are dug, a green manure crop is seeded, usually wheat.

Source of Nitrogen Important

In the standard fertilizer one-fourth of the nitrogen is taken from nitrate of soda, one-fourth from ammonium sulfate and one-half from tankage. Acid phosphate is used as a source of phosphoric acid and muriate for the potash.

Certain plots receive the standard amount (1,600 pounds) of the 4-8-3 mixture with all the nitrogen obtained from (a) nitrate of soda (b) ammonium sulfate (c) fish and (d) tankage. Other plots receive the standard amount with one-half the nitrogen taken from nitrate of soda and the other half from one of the three other materials mentioned. Two plots receive a mixture like the standard with the exception that fish replaces the tankage.

The potatoes were graded into "primes" and "seconds," but total yields only are recorded in this report.

By A. W. BLAIR

Referring first to the results with different sources of nitrogen the six-year averages—1917-1922 inclusive—show the following yields per acre:

4-8-3	Bushels
1,600 lbs., all N from nitrate.....	249
1,600 lbs., all N from ammonium sulfate..	214
1,600 lbs., all N from fish.....	246
1,600 lbs., all N from tankage.....	244

From these figures it will be noted that when all the nitrogen is taken from one source, the highest yield was with the nitrate of soda and the lowest with ammonium sulfate. However, in fairness to ammonium sulfate, it must be stated that the potatoes from these plots have been freer from scab, and thus of a higher marketable value per acre, than those from the nitrate of soda plots. The difference between the yield with fish and tankage is so slight as to leave the matter of choice with the individual.

When Everything Is Going In

When nitrogen was taken from two or more sources the average yields were as follows:

4-8-3	Bushels
1,600 lbs., half N from nitrate and half from ammonium sulfate.....	257
1,600 lbs., half N from nitrate and half from fish.....	259
1,600 lbs., half N from nitrate and half from tankage.....	259
1,600 lbs., one-fourth N from nitrate, one-fourth from ammonium sulfate and one-half from fish..	244
1,600 lbs., one-fourth N from nitrate, one-fourth from ammonium sulfate and one-half from tankage (standard).....	247

These figures indicate very clearly that it is a distinct advantage to have nitrogen from at least two sources. When ammonium sulfate is used in combination with nitrate of soda, the yield is 43 bushels in excess of the yield with all nitrogen from ammonium sulfate. The yields from a combination of nitrate and fish and nitrate and tankage give further proof of the equal value of the two organic materials. When the nitrate nitrogen is reduced to one-fourth of the total, the yields are distinctly less than when the nitrate supplies one-half of the total nitrogen.

The average yields per acre for the different amounts of the standard mixture, as compared with the check, were as follows:

Check	Bushels
800 lbs. 4-8-3.....	166
1,200 lbs. 4-8-3.....	214
1,600 lbs. 4-8-3 (standard amount).....	247
2,000 lbs. 4-8-3.....	259
2,400 lbs. 4-8-3.....	274
2,800 lbs. 4-8-3.....	276

In the light of these results, it does not take very much figuring to prove that fertilizers pay, as witness 48 bushels for 800 pounds of the 4-8-3 and 72 bushels for 1,200 pounds. It would require an economist, however, to arrive at the point of diminishing returns. This will be determined by the cost of labor, seed and fertilizer, and the selling price of the potatoes. Under some conditions it would undoubtedly pay to raise the application to 2,000 pounds, while under other conditions it would be most economical to stop at 1,200 to 1,600 pounds per acre. The increase in yield obtained by increasing the application from 2,400 to 2,800 pounds per acre is certainly not justified.

The Effect of Potash

The tests with the standard fertilizer modified to include different percentages of potash gave the following acre yields:

Check	Bushels
1,600 lbs. 4-8-0.....	211
1,600 lbs. 4-8-3.....	247
1,600 lbs. 4-8-6.....	253
1,600 lbs. 4-8-10.....	259
1,600 lbs. 4-8-0 and marl.....	233

With 3 per cent of potash giving a six-year average increase of 36 bushels per acre over no potash, there is little

difficulty in arriving at the conclusion that potash pays. The eight-bushel increase gained by increasing the potash to 6 per cent would probably more than pay for the increase in cost under normal conditions. The point of diminishing returns probably lies close to 6 per cent. Certainly the four bushels gained by increasing the percentage from 6 to 10 would hardly pay for the trouble and expense even with potash at the present low price level.

The yields with marl have been good, although none has been applied since 1917. It should be pointed out, however, that a large percentage of the potatoes on the marled plots have been so scabby as to be unsaleable.

It is not entirely safe to draw general conclusions from a local experiment, but since this soil is typical of much of the potato soil found in this and other Coastal Plain sections, it seems safe to suggest that in a large majority of cases, with similar soil and climatic conditions, 1,200 to 2,000 pounds of a fertilizer analyzing 4 per cent nitrogen, 8 per cent phosphoric acid and 3 to 6 per cent potash, with the nitrogen derived from at least two sources, will come about as near giving the maximum returns for the investment as any that can be offered.

The work makes it quite clear that there is little need for using organic materials beyond the amounts required to give a good mechanical mixture, if nitrogen in this form is to continue to cost more than nitrogen in the form of nitrate of soda and sulfate of ammonia.

The Relation of Lime to Farm Prosperity

(Continued from page 263)

as I imagine those of this locality to be, two tons of ground rock will pay if you are able to buy it."

"I have read that half a ton of the burnt lime is equal to a ton of ground rock. Is that so?"

"In theory, yes, or approximately so. In practice, rarely, if ever. We will take, for example, 100 pounds of raw limerock, analyzing in theory an absolutely pure carbonate of lime, and burn it in a kiln. On removing the product from the furnace, we find that in passing through the process of burning it has thrown off weight to the amount of 44 pounds, leaving 56 pounds of calcium oxide, or, in plain English, burnt lime. The 44 pounds weight that has been lost consists not of moisture, as you might suppose, but of an elemental gas called carbon dioxide.

"Now, when our 56 pounds of burnt lime is removed from the furnace, it immediately begins to seek this affinity it has lost, and in passing through the processes of slackening it recovers every ounce of the lost element and becomes once more 100 pounds of calcium carbonate, or raw lime. It is only when it has returned to this carbonate form that it becomes available for soil sweetening.

"Where we err in assuming that 56 pounds of burnt lime equal 100 pounds of raw lime is that we do not take into consideration the fact that the burnt product begins to seek its affinity; to take back lost weight, the moment it leaves the kiln. If it could be tightly confined in barrels, there would be no great action in a considerable period, but shipped loosely in box-cars, it is possible that the 56 pounds may become 60 or 70, or even more, by the time the farmer receives it as weighed out by the local dealer. Also, we must consider the possibility that quantities of the stone may not be well burned, and in too large chunks to be available as raw lime."

Which Form of Lime Is Best?

"Then you think the raw rock is best?"

"I would not make that statement. Either form is excellent when properly applied, and the whole of lime science as bearing on the right kind to use resolves itself into a simple question of where you can buy the most calcium carbonate, that is, available lime element, for the least money, taking into consideration the difficulties of hauling and spreading. If you are in a section where burnt lime is cheap and cheaply handled, use that form. If the mill price and freight rates on the ground rock are much lower than the other,

(Continued on page 270)

A "Jim-Dandy" Truck

Model K-16, One Ton

\$1295

Chassis only—at the factory

The Best Truck for the Farm

For general farm use, on hard roads or in rough fields, the Model K-16 one ton GMC provides more pulling power, more speed, and more economy than other trucks of the same capacity.

Moreover, this "Jim-Dandy" truck is built from truck parts exclusively—no passenger car parts used. Consequently it has the sturdiness and enduring performance that is demanded for hauling over all kinds of roads and in all kinds of weather.

The exclusive features of GMC construction, developed from more than ten years of successful truck building, have provided this truck with more continuous performance and lower operating and maintenance costs. Due to its advanced design there is not a single wearing part in this truck that cannot be replaced. Such refinements as Removable Cylinder Walls, Removable Valve Lifter Assemblies, Pressure Lubrication, and Instantaneous Governor action all give to this truck the dependability that is so vital in farm trucking.

In every detail of construction the Model K-16 has been built according to the most approved and most advanced practices.

Magneto ignition, electric lights and starter with conduit wiring entirely separate from the ignition wiring, radius rods, thermosyphon cooling, oversized brake drums, interchangeable brake rods, complete instrument board, pressure chassis lubrication, cord tires—

All these are universally accepted as the best for motor truck use—all these are standard in this GMC.

Measured by any standard this one ton truck has no superiors—and its cost, considering its quality, is much lower.

Write for an illustrated booklet, "Motor Trucks on the Farm."

February Pool Price \$2.38

THE Dairymen's League Cooperative Association announces \$2.38 a hundred as its gross pool price for the month of February. From this 7 cents per 100 lbs. are deducted by the Association for expenses of administration, and 10 cents a hundred are borrowed on Certificates of Indebtedness. This leaves a cash price to farmers for January milk of \$2.21. This is the base price for milk containing 3 per cent butterfat in the 201-210-mile freight zone from New York City. The net price of \$2.31 for February is 34c above the net price for February last year.

Prominent New York County Agents Resign

Charles Wille, manager of the Sullivan County Farm Bureau; Fred R. Walkley, county agent in Madison County, and H. F. Keyes, manager of the Schenectady County Farm Bureau, have resigned their positions to enter other fields of work. Mr. Walkley is going farming, Mr. Keyes is going into the real estate business, and Mr. Wille has accepted the management of the Karha Farms, near Parksville.

Mr. Wille is one of the most popular Farm Bureau men in the State, receiving widespread recognition for his work. In 1923 he was president of the New York State County Agents' Association, better known as the "Sod Busters." Mr. Wille planned and conducted the first blacksmith school ever held in New York State, and, perhaps, the entire country. The school was located in Liberty.

The Relation of Lime to Farm Prosperity

(Continued from page 269)

use ground rock. In general, limestone can be ground at less expense than it can be burned, but a long freight haul sometimes nullifies this gain. Try out an experiment of comparative cost and results on your own ground by using ground limestone on one plot, hydrate on a second and run-of-the-kiln burn lime on a third."

"What is the hydrate?" asked the farmer.

"It is a good grade of burnt lime which has passed through the process of water-slackening, coming theoretically from the 56 pounds weight of the fresh-burnt form up to 74 pounds of calcium hydrate. It has largely lost its caustic properties, and may be stored for some time in paper sacks. I believe that in its commercial form it has been hydrated by forcing steam through it. It is largely used by masons, but, most unfortunately, its cost places it beyond the possibilities of any great use in agriculture."

Fineness Is a Factor

"What about this argument over fineness of grinding the raw rock?" inquired the farmer. "A fellow was along the other day selling ground limestone that was about as fine and white as flour. Asked a tremendous price for it, though."

"Fineness of grinding is a desirable quality," answered the professor, "but not so much of one as to admit of any great advance in the cost. I think we may say that limestone as now put out by the regular trade is ground sufficiently fine as to be available for all ordinary needs. As to the light color of the product shown you, it perhaps came from quarries of dolomitic limestone, so-called, which is not in practical use at all superior to our common blue limerock."

"What's the best way to apply lime?"

"Any way to get it on evenly, the proposition being to bring as many particles of lime into contact with as many particles of soil as possible. No spreading by hand equals the use of a limesower. As to the time of application, put it on as long in advance of the crop which is to benefit by it as circumstances will allow."

"Well," said the farmer, "that's a pretty good lecture, and you talk like a man who believes in what he says. What do you ask for lime, John?"

Whereupon I gave him prices on the different varieties, secured his order for a ton, or a carload, as his circumstances might dictate, and journeyed on with the old professor.

Fight Daylight Saving

THE daylight saving bugaboo is not dead in New Jersey, and the issue will again be up in another few weeks. The intention of cities in the northern part of the State to go into the new time schedule, promises the same inconvenience and loss experienced in recent years, to those who use the markets of New York City and New Jersey cities in the Metropolitan area. Philadelphia will go upon daylight saving on April 29, unless the present ordinance to that effect is repealed in the coming month.

The organized farm groups of South Jersey are planning active opposition to the change from standard time, which greatly interferes with their working conditions. The New Jersey Federation of County Boards of Agriculture has the ultimate abolition of daylight saving as one of its planks, which the New Jersey State Grange has continually voiced its disapproval. There was no controversy over daylight saving during the current session of the New Jersey Legislature. Pressure of the dairymen in northern counties of the State has brought about a certain reciprocity with the railroads, and the milk producers now understand that some of the milk trains will be run on schedules which allow collection of milk according to sun-time.

Here and There in the Counties

The warm days of early March were improved by South Jersey farmers, who started plowing on such land as was not too wet. The snows and rains which immediately followed, put a stop to the field work, although mid-March held better promise for early outside work. Throughout most of New Jersey, however, the ground is still heavy with moisture and frost, the latter penetrating farther than in recent winters.

In Salem County, onion growers are preparing for their usual acreage, according to early estimates. Onion sets are being received in quantity, particularly around Cedarville, N. J., which is in the heart of the biggest onion producing center in New Jersey. It is the practice of growers in this territory to purchase practically all of their sets, except on the occasional farms where irrigation has been installed. Experience shows that the weather is usually too dry in this section at the time when the sets should be fit for transplanting, and home growing of the onion sets is seldom accomplished successfully. The Salem County growers market their crop immediately after harvest, few onions being stored for the late fall and winter markets.

From a survey of the hay situation in Burlington County, the County Agent's office found that 202 farmers in that county had 2,629 tons of hay for sale and that 474 tons were needed for feeding purposes. This indicated 200 cars of hay to be disposed of outside of the county. County Agent, Clarke W. Clemmer, used the survey to inform those in need of hay as to the location, amounts and kinds of hay available in their communities. This service of the County Board illustrates the practical way in which the farmers may be brought into touch with each other on products which they need to buy or sell. The farmers reach their own agreement upon terms of sale, using published market reports as the basis of prices and values.

Monmouth Co.—The Monmouth County Board of Agriculture through its county agent, Ellwood Douglass, reports several satisfactory strains of corn as the result of community corn variety demonstrations in the past few years. These demonstrations have been running on 25 farms. They show that the yellow dent corn, grown by J. P. Hulsart of Manasquan, is an all-round sort; good stalk, good depth of kernel, medium to small cob and heavy yielder. It is adapted to most corn soils in the county. D. D. Solomon of Freehold, has a white, smooth corn adapted to questionable land as well as good corn ground. For white cap yellow dent, the W. H. Reid corn stands out as one of the highest in these community tests. It does well on a variety of soils, especially on the best corn land. Further tests will be conducted on the white corn grown by E. W. Winson, the yellow corn grown by J. W. Dobbins, Long's Champion Yellow and the yellow of I. B. VanDer-veer.

SOCONY MOTOR OIL for TRACTOR LUBRICATION

You Spent Good Money for Your Tractor Keep It in Good Condition

Only correct lubrication can keep your tractor engine free from destructive wear—full-powered for every purpose. It needs an oil that retains its lubricating qualities at the high operating heat of tractor engines.

Socony Motor Oil keeps pistons, cylinders, valve mechanism and bearings continuously cushioned with a wear-preventing film of pure lubricant. Maintains full compression and gets from the fuel every usable ounce of power. Means small bills for repairs.

The Socony Motor Oil chart will tell you the correct grade for your tractor. Ask your dealer to show you, or write us direct.

The Cause of White Diarrhea

White Diarrhea is caused by the bacillus Bacterium Pullorum transmitted through the yolk. There is scarcely a hatch without some infected chicks. The germs multiply very rapidly and one infected chick may infect the entire brood. The germs can be killed by the use of preventives. Intestinal Antiseptics to kill the germs should be given as soon as the chicks are out of the shell. It is much easier to prevent than it is to cure.

How to Prevent White Diarrhea

Dear Sir: Last spring my first incubator chicks when but a few days old began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged. Finally, I sent 50c to the Walker Remedy Co., Dept. 433, Waterloo, Ia., for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We never lost a single chick after the first dose. We raised 700 thrifty, healthy chicks, where before we never raised more than 100 a year. I'd be glad indeed to have others know of this wonderful remedy. Ethel Rhoades, Shenandoah, Ia.

Don't Wait

Don't wait until White Diarrhea gets half or two-thirds your chicks. Don't let it get started. Be prepared. Write today. Let us prove to you that Walko will prevent White Diarrhea. Send 50c for box on our guarantee—money back if not satisfied.

WALKER REMEDY CO., Dept. 433, Waterloo, Ia.

WE PAY \$200 MONTHLY SALARY, furnish rig and expenses to introduce our guaranteed poultry and stock powders. Bigler Company, 507, Springfield, Illinois.

"Work" and Poultry Profits

The Factor That Really Determines Success

IF I were asked what one factor counts most for success in poultry culture, my answer would be unhesitatingly in the above short word. Some given the same question my reply "proper quarters," others "suitable feed" and yet others, "birds of high-class breeding." But any of these, or all combined will be useless to the breeder who does not do overalls and jumper daily and supply the oil of "elbow grease" to the operations of his plant.

Hundreds go into the hen business annually, and usually out of it as well, with the idea that they can hold down their regular job, which perhaps calls for nine or ten hours of their time a day, and at the same time clean up \$25 or \$30 a month on the side with their hens. They seem to think that providing feed and water in the morning, and a second feed and bringing in the eggs at night constitutes about all the work necessary to keep things running profitably. Of course, they realize that chickens are to be raised in season, but raising chickens to the uninitiated, looks more like fun than otherwise. Unfortunately a great deal

By J. L. WOODBURY actually enjoyed the work. And so every one must learn to do—work hard and find pleasure in it if they would succeed with poultry.

BASIS FOR CUSTOM HATCHING

I am an old subscriber to your paper, and I wish you would please tell me of a basis for hatching eggs in my incubator for my neighbors. My neighbors have asked what it is worth to hatch some eggs for them. A wants to furnish his own eggs, B wants to know what it is worth per chick to hatch them, or should B be charged per egg for incubation?—Mrs. M. J. P., New York.

Various methods are used to arrive to a basis for custom hatching in this way. Perhaps the most general method is a specified charge per 100 eggs and a bonus per 100 chicks which hatch. The owner of the incubator is in no way responsible for the fertility or condition of the eggs as he received them and if the payment was entirely upon the basis of chicks hatched, he would be placed at a decided disadvantage in case the eggs were not from fertile, vigorous stock.

The cost to the owner is approximately the same whether the chicks

It is just as important for the poultryman to put effort into the management of his winter flock as it is for the dairymen to give the herd added attention

of poultry literature is being broadcasted at this time, tending to stimulate this illusion.

Now, we don't wish to discourage any one who thinks of going either wholly or in part into poultry. There is pleasure in it, there is money, possibly a great deal of money in it, but these are only for the man who is willing to put work into it. The man with a regular job can realize a pretty penny from hens as an adjunct, if he is willing to devote the most of his spare time to his birds and doesn't have more than he can look after thoroughly. But if he starts in with the idea that hens will pretty much look after themselves, he is doomed to failure in proportion to the magnitude of his enterprise. One might about as well think of making a success with a saw mill by starting it up in the morning and shutting it down at night, with two or three brief visits to see things were going in the course of the day.

We know of instances where a man and wife were both holding down good jobs and making a generous sum with a backyard plant besides. But they were both interested in the business and not afraid to rise early in the morning to get the chicks out of the brooders, or to sit up late at night to dress off birds for market. They didn't put in much time automobiling before and after hours, but found their chief diversion around their little plant.

With tending the incubators, keeping the brooders clean, preparing the different feeds and water, sowing green stuff, moving fences to afford fresh ground, catching and shipping broilers, cleaning and packing eggs for market, providing shade in summer and making all snug and tight in winter, cleaning up filth and removing droppings, fighting lice and mites (of itself no small job) guarding against rats, cats, hawks and other vermin—with looking after these and manifold other duties, they were kept pretty busy. But they

hatch 30 per cent or 85 per cent. Therefore, the charge should be based largely upon the number of eggs placed in the incubator. However, so as to insure the best of care during the hatch and to encourage the best efforts on the part of the incubator operator, a small bonus per 100 chicks will insure fairness and conscientiousness on the part of the one who is conducting the hatch. This method is very fair to both sides when the customer furnishes sterile eggs. The incubator owner however, is paid for his trouble and at the same time if the chicks do not hatch, the customer does not pay so much as he would if a good hatch resulted.

Conditions vary, but for small scale custom hatching, a charge of \$1.50 per 100 eggs for incubation and an additional charge of \$1.50 for each 100 chicks hatched is perhaps a fair rate. Thus, if 300 eggs were set and the hatch was 200 chicks, the cost to the customer would be \$7.50 or a net cost per chick to the customer, of 3 3/4 cents a piece.

One farmer in Pennsylvania has built up quite a trade among his neighbors, following this basis and the customers come back to him each year. Sometimes his neighbors wish as few as 50 eggs hatched, while others fill the incubator each time. When only 100 or 50 eggs are received from a customer, the chicks are kept separate by dividing the egg trays in the incubator into compartments which hold the required number. The chicks are kept separate in this way, when the hatch comes off, there is no trouble in returning the chicks to the customer which come from his own eggs.

price?" If you are one of these people you made a big mistake for it takes just twice the money to put hens in condition than it would have taken in September, and they have been boarding with you besides. Our theory is, it is not the hen who lays the largest number of eggs in a year that pays the most profit, but the one who lays the eggs at the time when they bring the most money.

Can you produce three dozen eggs in summer when they bring 30 cents a dozen, as cheap as you can produce one dozen when they are 90 cents? Perhaps you can, but I don't agree with you. We have fifteen full-blood Columbian Wyandotte hens, 1921 hatch, that laid 394 eggs in the last 18 days of November and 31 days of December. These eggs sold for over \$27 on the market, and these hens consumed in that time, about \$5 worth of feed. But remember these hens were in fine condition when they went into winter quarters and were laying then.

These hens made a record as pullets and will be in our breeding pens this year, headed by a cockerel from a very heavy winter laying strain and we hope to raise our record next year. It is a great temptation when there is a nice warm day and no snow, to let the hens run out, but it is a mistake and the egg basket will tell you so, if you don't get some colds to doctor besides. There is no larger detriment to hens than cold feet. I was in the hen house recently, where a part of the floor was dirt covered with coal ashes and holes cut in the sides of the building a few inches up from the floor. These were covered with wire and cloth. I was told in pleasant weather the cloth was raised. Now those ashes cannot help but be cold and neither can there help but be a draft on this floor if the curtain is not fastened very tight, which it cannot be if it is raised and lowered.

Every day or so I know these hens have cold feet. I was told they "do not lay" and I am sure they have more feed than ours do, some fancy mixed feed to be sure, which ours never have. The cold has more to do with it than the feed. We have gained all our methods from years of experience and some of it has been expensive too, so we are glad to help others and try and prevent many costly mistakes.

A Boost For Wayne County
(Continued from page 265)

teams six miles to Palmyra and shipped from there by rail, and all of the coal used in Marion was drawn by the teams on their return trips from Palmyra. But now times have changed. Marion is no longer a back number. It has a railroad from Marion to Newark connected with the Pennsylvania Company, which handles all the freight and furnishes all the cars at all times they need and whenever they want them, so that the Marion Railway never lacks for cars at any time.

Yes, times have changed in Wayne County since I became a subscriber to the American Agriculturist, which has stood so faithfully by the farmer for a prosperous Agricultural, and to-day is the nineteen-twenty-three leading farm journal of the State. Taxes are more, to be sure, but everything comes at a price, so, for all of the privileges we enjoy now, we pay but little more compared to years ago.

So, now, I think, Wayne County, with her 15 towns, has made some great improvements along the lines of agriculture by building good roads and good school houses, cleaning up waste land and draining the same for use, building modern farm buildings, with good churches and every other public building that goes to make a modern and enterprising county. And as long as the hills of Wayne stand and the valleys produce as bountifully as in the past, and with the Barge Canal floating through its center, with our assistant Superintendent of Public Works now appointed to look after the interest of the taxpayers of both parties in the county, we can feel assured that no public money will be wasted, but that results will be produced and that the people are ever ready to do their bit in any good cause up in Wayne County, and ever looking forward for a bountiful harvest and a happy and prosperous year.—FRANK MANDERS, Marion, N. Y.

Canada Offers "Last Chance" for Virgin Farms

THINK of what you could produce on a farm of virgin fertility, without the burden of high-acreage cost. Think of what 20-to-40 bushel wheat would mean to you under these conditions, and of dairying and stock raising on cheap pasture land. Land pays for itself in a few crops—no artificial fertilizer—no heavy investment. You have envied the farmer who got his start when land was cheap. Here's your chance, perhaps your last chance, for the same brand of prosperity.

Western Canada—Your Opportunity!
Special Renter's Plan—Buy Out of Profits

Western Canada is the farmer's land of opportunity. Thousands of settlers who started not many years ago with little or nothing, are today the owners of fine farms, with comfortable homes and barns, thoro' bred stock, dairy herds—all the marks of prosperity. Yet land is not dear—only \$15 to \$20 an acre for rich, virgin, prairie convenient to railways. Land is not dear in Western Canada—yet—because there is so much of it. But many settlers are expected in 1923, and now is your opportunity, before the best farms are taken. Get started. Taxes are reduced, not raised, on land brought under cultivation. On farm buildings, improvements, machinery, personal effects, automobile, etc., there is no tax at all. Canada wants workers—it wants its land farmed—and the farmers, through their municipal councils, have practical control of all local taxation.

To aid and encourage the honest worker with perhaps little capital, the Canadian Government has a "Renter's Plan", whereby one may work a new or improved farm—"Try it out" for several years if desired—and buy a farm of his own out of profits.

Thirty-Two Years to Pay

For the benefit of those wishing to buy land, a national non-profit sharing organization—the Canada Colonization Association—has been established, with head office at Winnipeg, and United States office at St. Paul. This Association offers selected land convenient to railways—much of it at \$15 to \$20 per acre—on very small cash payment; no further payment until third year; balance extended over thirty years, but purchaser may pay up and obtain title at any time, if desired. Interest six per cent.

Get the Facts—Costs You Nothing

Mail the coupon to the agent mentioned below, located nearest to you. He is the official representative of the Canadian Government, authorized to give you information and assistance, without charge, and glad to be of service to you.

When I Buy Cows

How To Ship Cattle by Express

ALMOST unbearably slow after the swift

By H. E. BABCOCK

rush of the motor car we jerked along in a swell-bodied cutter on a track level with the fence tops on either side.

We come to a white farm house backed by long, low, wood-colored buildings. We turn in between shoulder-high snow drifts. The owner greets us, and we stiffly stump our way to the cow stable. A pleasant odor, the peculiarly sweet smell of the well-kept winter dairy greets us. My glasses steam up. I stand confused, uncertain, and gradually, as though a fog were lifting, two long rows of dairy cows appear on either side of us.

A big gray roan attracts my attention. She looks large in comparison. I want big cows. In fair condition, springing eight or nine years old, with every evidence of being a good producer. Her price is \$60. I pass her up; she is too old—her color is against her.

A nice black-and-white five-year-old next attracts me. I am told she was fresh last fall. She will weigh perhaps 1,000 pounds. Her udder is nicely balanced, but small, with a milk vein running straight along the belly to enter through a milkwell little larger than a small pencil. Her owner thinks she is

The first group, despite the abundance of them for sale, are too high. A man cannot afford to own them. If our T. B. officials don't watch pretty carefully there will be a lot of them T. B.-tested this summer.

The others seemed cheap, but who can tell? A good, fat, young springer that will give 50 to 60 pounds of milk this spring and early summer months ought to be worth \$100, even if the milk market, as seems likely, does go all to pieces. She can be kept over and with more stable conditions ought to pay for herself. But again, who can tell? These are indeed uncertain times.

Appearances Play Big Part in Sale Value of the Herd

No little part of the sale value of a herd depends upon the first impression it makes on a buyer when he steps into the barn. Placing a good cow on the end of the string next the door, therefore, becomes simply a matter of good business.

Next in importance comes the matter of arrangement in the line-up. When a big raw-boned cow stands next to a little chunky animal, the undesirable characteristics of both are ac-

Ready to Travel from Ithaca to Bermuda

centuated. A bad sloper should not stand opposite a bright window. Buyers are looking for type these days.

If cows always stand in the same places they may be lined up so as to appear almost uniform in size. Such a line-up adds materially to the appearance of the herd as a whole.

Clippers run over the udder and along the milk veins on a fresh cow bring out that milky appearance buyers always look for. Tails should be clipped, of course, but we do not like to bob off the brushes. There is nothing, after all, that quite so much adds to the "dress-up" of a cow as to have her switch washed and brushed out.

I know one man who runs a most practical dairy farm but who sells a few cows every week, who always washes out his cows tails. He tells me that two men can clean up sixty cows in about half an hour and that he can cash in on the time so spent on every sale.

His method is to rinse the switch out in a pail of warm water, give it a twist to dry it, and then to follow along and give it a vigorous shake or two and a few passes with a big coarse brush.

SHIPPING BY EXPRESS

From time to time we ship animals away by express. We also occasionally have them shipped to us. Our experience both in shipping and receiving leads me to set down here our conclusions for what they are worth in regard to the proper kind of a crate in which to handle an animal.

To begin with, cattle crates should always be built on bed-pieces running lengthwise of the crate. This makes it possible to put rollers under them and so roll them easily in and out of a car and on an express truck. We have received crates built with three cross

The Range of Prices

I found cows were plentiful, the range of prices for springers to be from \$60 to \$100, for fall cows to be from \$40 to \$90. Generally, the cows in the herds I visited were clean. Most all of them, however, were thin, and in many herds I was really surprised at the lack of evidence of production. These small, thin cows that lack any evidence of breeding can be bought below \$50. The others, those with some size, condition and breeding, range up to \$100.

CRABNE SILOS

Giants in Strength

When you build a new silo or rebuild your old one, make it a Craine—the strongest as well as handsomest silo made. Its three wall construction gives perfect silage protection. Outside the wall of upright staves is an air-tight, water-proof, frost-defying inner wall of Silafelt. Outside of both is the spiral Crainelox covering, of giant strength—no hoops, lugs, weak spots, repairs, but permanent protection for every inch of wall. You can rebuild an old stave silo into a Craine, at half the cost of a new silo.

Write for beautifully illustrated catalog and special discount on early orders. Agents wanted.

bed-pieces, which made it impossible to use rollers to any advantage.

The next most important consideration is to have the crate boarded closely for some eighteen to twenty inches up from the floor. When a crate is being handled an animal is apt to lose its balance, and in its struggles to right itself will often stick its leg through the slats unless these are close enough together to prevent such an accident.

As Comfortable as the Stable

Other valuable features in crate construction are brought out in the illustration, which shows an animal crated for shipment to Bermuda. This crate is so constructed that an animal can live comfortably in it almost indefinitely. It stands in a stanchion, just as though it were in its own stable. There is a manger in which a pail of water can be set and in which hay and grain can be fed. The back door is so hinged as to open outwards and permit easy cleaning of the crate, and rebedding of the animal.

The crate in the illustration looks a little heavy in construction, but our experience has been that it is much better to pay express on 100 pounds of lumber and have a crate which will withstand strain, than to economize on weight and have a crate go to pieces during shipment. A crate such as is shown in the illustration can be used indefinitely, and an animal can be safely shipped in it almost any distance over any sort of route.

I Visit Two Unusual Farms

(Continued from page 267)

highest grades of beef shipped in from the big packing houses.

That man has one job ahead of him, which, if it were mine, I would look forward to as something pretty dreadful. He is hopeful that by spring his great strawstack will be undermined and leveled down and trodden into the barnyard. It will also be mixed with liberal quantities of cow droppings and well-laced, with long cornstalks from which the cattle have husked the nibbins. Also it will be weighted with plenty of snow water and with the weepings of the April showers and somehow it must be gotten out onto the fields.

Undisputed Championship

NOW, according to the most celebrated of the Greek myths, the fifth of the twelve Labors of Hercules, consisted of the job of cleaning the stables of King Augeas, where 3,000 oxen had been fed for 30 years, and neither the King nor his hired man had ever drawn out a single load of manure during all that time. Well, Hercules was a youth, large for his years, husky and full of pep, and a sort of a demigod, anyway. So when he was taken around and shown the job, he promptly drew on his rubber hip-boots, peeled off his coat and vest, spat on his hands and waded into it and cleaned up the whole mess by sundown, thus winning the undisputed title as the champion long-distance manure-thrower of all time and making for himself an imperishable name that can never pass away. I am assured, however, that Hercules will have very little on this Cayuga County farmer after the manure spreader goes into action in the front-line trenches next spring.

This man is surely dealing with his problems in a way that is very unusual in our State, and I have no word of criticism, but only of commendation, because he is blazing a new trail. In a general way, however, I have little confidence in any sweeping or revolutionary change in our agricultural systems or methods. Most of us are dairymen, and dairymen we had best remain. This man was led to his present methods as a protest against labor conditions and a revolt against the eternal routine of the dairy farm. I do not think he expects to handle as much money as if he were to join the morning procession of milk rigs. But at least he can make his farm self-supporting from within his own fences. He need not feel that he has committed the unpardonable agricultural sin if he should sleep some morning until, say, six A. M.

In any case, it is most interesting to find Corn Belt Agriculture transplanted to a big, generous, old New York State farm.

THE McCORMICK-DEERING PRIMROSE

Gives You All of the Cream

It skims clean, and the cream brings the highest market price--the globules of butter fat are smooth and unbroken, and the cream is in the best condition for butter making. Such a separator brings you the greatest return from your cows. Because experienced farmers and dairymen insist upon receiving positive profits from their investment in dairy cattle, buildings, and equipment, they demand and use a clean-skimming cream separator--the McCormick-Deering Primrose.

Ask for a Demonstration of the McCormick-Deering Primrose

We want every dairy farmer to see this modern, efficient, ball-bearing separator. It combines the advantages of ample capacity with easy turning and close skimming. The McCormick-Deering dealer will be glad to give you a demonstration and trial on your own farm. Ask him to do it.

Saved Big Veterinary Bills -- Cows Gave More Milk the Year Through

Mr. C. E. Dodge of Dewittville, N. Y., is one of the many cow owners who have discovered that it pays best to PREVENT cow diseases. He knows that it is a fine thing to have on hand such a valuable medicine as Kow-Kare in the event of actual diseases, such as Abortion, Retained Afterbirth, Barenness, Milk Fever, Scours, Bunches, etc. But he also knows that a moderate use of Kow-Kare in the feed not only PREVENTS these diseases, but greatly increases the winter milk flow. He writes us his experience, as follows:

"Since I have been on the County Farm, I have been using Kow-Kare in the dairy for the last ten years. I have 52 cows. My experience is that a few dollars' worth of Kow-Kare saves us a great many dollars' worth of veterinary bills, and also every cow in the dairy that I feed it to produces more all the year thru because of the Kow-Kare. I have no sick cows or trouble, when I begin feeding Kow-Kare, from the first of January until I turn them out in the Spring."

Winter feeds are so much harder on the digestive and milk making organs of the cow that the vitality of these functions is sure to become impaired unless nature is assisted. Kow-Kare is designed primarily to strengthen these very organs so that they may throw off disease and keep up the normal milk production.

The best of it is, this valuable Kow-Kare treatment costs so little. Just a tablespoonful of the remedy morning and evening about one week in each month will keep a cow in best of health and heaviest milking. Your troubles from sick and backward cows are over when you have learned to depend on Kow-Kare.

Feed stores, general stores and druggists sell Kow-Kare; large size \$1.25, medium, 65c. We will send postpaid if your dealer is not supplied. Write now for our valuable book, "The Home Cow Doctor."

When Writing Advertisers Be Sure to Mention American Agriculturist.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Bang-up, red blooded stories that make you GASP!

Every Chapter Crammed Full of WHITE-HOT THRILLS! Every Book a "Humdinger"

12 Full Length Novels \$1.98 For All Just Think of It!

See All You Get: 12 Bully Books, Sizzling with Excitement!

DON QUICKSHOT OF THE RIO GRANDE STEPHEN CHALMERS "Looking for trouble is a middle name," said Impulsive Pop, adventurous cowpuncher. And there on the border, among raiding Mexican bandits, train robbers, Texas rangers, a prairie fire—not to mention a pair of blue eyes—he did not have far to look.

SPAWN OF THE DESERT W. C. TUTTLE A tale of Calico Town. Where men lived raw in the desert's maw, and Hell was nothing to shun; where they buried 'em neat, without preacher or sheet and wrote on their tombstone, crude but sweet, "This Jasper was slow with his gun."

THE LURE OF PIPER'S GLEN THEODORE G. ROBERTS It was the lure of all the great timber country of the North, of plentiful game, of the clear wind from the great plains. The call came South; young Jim Todhunter heard it, and a great tide of life in the North caught him up—to bring adventure a-plenty.

APACHE VALLEY ARTHUR CHAPMAN A story of a cattle war in the southwest, with all its means—terror and blood feud; alarms by night and day; rustling and stealthy murder. And through it all are woven the lives of true men as well as thieves, men whose lives reflected the glories of the land they protected.

THE CHALLENGE OF THE NORTH JAMES B. HENDRYX This is a story of the call of the great Northland; of purposes and cross purposes, of true men and of "bad" men; and of big deals and pioneering triumphs. A tale of the North which holds for the young, the strong and the brave adventures that are countless.

THE SECOND MATE H. BEDFORD-JONES Peril and mutiny on the China Seas. When every seaman was running red, and with two white women at the mercy of a villainous crew composed of the sweepings of the outermost islands. Jim Barnes realized the eagle of desperate battle he had accepted when he signed on as second mate of the Sulu Queen.

THE DEVIL'S PAYDAY W. C. TUTTLE A sky of brass, the sun a flame. A hunk of earth so doggone hot And the land no place to dwell; That it still belongs to Hell.

THE CANYON OF THE GREEN DEATH F. R. BUCKLEY Who were the devils in human form whose haunt was the lost barranca? Invisible, terrible; they brought the redoubtable young officer of the law to a strange dilemma. The law of the land commanded him not to desert his prisoners; the law of the desert ordained that he stand by his companions. Which did the Fates decree he should obey?

SKY-HIGH CORRAL RALPH CUMMINS A yarn of unending feud between cattlemen and forest rangers; of forest fires, grazing herds and bitter fights at timberline. Yet in the end our gallant young ranger, through ordeal of battles, fire and blood, brought the old timers to see that the new ways of forest conservation are best.

LOADED DICE EDWARD L. SABIN A romance of Texas of the early days, when lives depended on the quickness of draw, and all the courage of the pioneers was needed to brave the perils they so fearlessly faced. A thrilling tale of men who were jugglers with death.

SONTAG OF SUNDOWN W. C. TUTTLE The story of the question of ownership of the T J ranch—a question which promoted bloodshed and a war of no mean caliber. The cowpunchers of this story will live long in your memory for their originality and enterprise. They are men whose best friends were their nerve and their gun.

ARIZONA ARGONAUTS H. BEDFORD-JONES Three adventurers whose fortunes in the Arizona desert lead through drought and danger to the goal they sought, gold, free gold, the gold of which they had always dreamed. They were men quick on the trigger, who loved to face odds.

SEND NO MONEY

You can get this whole library of 12 fascinating, nerve-tightening books for about 16c each. The whole set sent to you right now—without sending a penny in advance. But listen! The Valley of the Giants—By Peter B. Kyne

"I DO NOT know that she feels for me anything stronger than a vagrant sympathy, Dad, for while she is eternally feminine, nevertheless she has a masculine way of looking at many things. She is a good comrade with a bully sense of sportsmanship, and unlike her skunk of an uncle, she fights in the open. Under the circumstances, however, her first loyalty is to him; in fact, she owes none to me. And I dare say he has given her some extremely plausible reason why we should be eliminated."

"Perhaps, perhaps. One never knows why a woman does things, although it is a safe bet that if they're with you at all, they're with you all the way. Eliminate the girl, my boy. She's trying to play fair to you and her relative. Let us concentrate on Pennington."

"The entire situation hinges on that jump-crossing of his tracks on Water Street."

"Then, lad, your job is to get your crossing in before he finds out, isn't it?"

"Yes, but it is an impossible task, partner. I'm not Aladdin, you know. I have to have a franchise from the city council, and I have to have rails."

"Both are procurable, my son. Induce the city council to grant you a temporary franchise to-morrow, and buy your rails from Pennington. He has a mile of tack running up Laurel Creek, and Laurel Creek was logged out three years ago. Ninety-pound rails are rusting there."

"But will he sell them to me?"

"Not if you tell him why you want them."

"But he hates me, old pal."

"The Colonel never permits sentiment to interfere with business, my son. He doesn't need the rails, and he does desire your money. Consider the rail-problem settled."

"How do you stand with the Mayor and the council?"

"I do not stand at all. I opposed Poundstone for the office; Dobbs was once a bookkeeper in our office, you will remember. I discharged him for looting the petty-cash drawer. Andrews and Mullin are professional politicians and not to be trusted. In fact, Poundstone, Dobbs, Andrews, and Mullin are known as the Solid Four. Yates and Thatcher, the remaining members of the city council, are the result of the reform ticket last fall, but since they are in the minority, they are helpless."

"That makes it bad."

"Not at all. The Cardigans are not known to be connected with the N. C. O. Send your bright friend Ogilvy after that franchise. Give him a free hand and tell him to deliver the goods by any means short of bribery. I imagine he will know exactly how to proceed. I know you can procure the rails and have them at the intersection of B and Water streets Thursday night. If Ogilvy can procure the temporary franchise and have it in his pocket by six o'clock Thursday night, you should have that crossing in by sunup Friday morning. Then let Pennington rave. He cannot procure an injunction, and hold us up indefinitely, because by the time he wakes up, the tracks will have been cut. The best he can do then will be to fight us before the city council when we apply for our permanent franchise."

"Partner, it looks like a forlorn hope," said Bryce.

"Well, you're the boy to lead it. And it will cost but little to put in the crossing. Remember, Bryce, once we have that crossing in, it stands between Pennington and the law which he knows so well how to pervert." He turned earnestly to Bryce and waved a trembling admonitory finger. "Your job is to keep out of court. Once Pennington gets the law on us, the issue will not be settled for years; and in the meantime—you perish. Run along now and hunt up Ogilvy. George, play that 'Suwanee River' quartet again. It sort o' sooths me."

IT was with a considerably lighter heart that Bryce returned to the office, from which he summoned Buck Ogilvy by telephone.

"Thanks so much for the invitation," Ogilvy murmured gratefully. "I'll be down in a pig's whisper." And he was. "Bryce, you look like the devil," he declared the moment he entered the private office.

"I ought to, Buck. I've just raised the devil and spilled the beans on the N. C. O."

"To whom, when, and where?"

"To Pennington's niece, over the telephone about two hours ago."

Buck Ogilvy smote his left palm with his right fist. "And you've waited two hours to confess your crime? Zounds, man, this is bad."

"I know. I've probably talked you out of a good job."

"Oh, say not so, old settler. How did you let the cat out of the bag?"

"That remarkable girl called me up, and accused you of being a mere screen for me and amazed me so I admitted it."

Ogilvy dropped his red head in simulated agony and moaned. Presently he raised it and said: "Well, it might have been worse. Think if she called in person! She would have picked your pocket for the corporate seal, the combination of the safe, and the list of stockholders, and probably ended up by gagging you and binding you in your own swivel-chair."

"Don't, Buck. Comfort and not abuse is what I need now."

"All right. I'll conclude my remarks by stating that I regard you as a lovable fat-head. Now, then, what do you want me to do to save the day?"

"Deliver to me by six o'clock Thursday night a temporary franchise from the city council, granting the N. C. O. the right to run a railroad from our drying-yard across Water Street at its intersection with B Street and out Front Street."

"Certainly. By all means! Sure you don't want me to arrange to borrow a star or two to make a ta-ra-ra for the lady? No? All right, old dear! I'm on my way. Nevertheless, for your sins, you shall do me a favor before my heart breaks after falling down on this contract you've just given me."

"Granted, Buck. Name it."

"I'm giving a nice little private, specially cooked dinner to Miss McTavish to-night, in one of those private screened corrals in that highly decorated Chink restaurant on Third Street. Moira—that is, Miss McTavish—is bringing a chaperon, one Miss Shirley Sumner. Your job is to entertain Miss Sumner."

"Nothing doing!" Bryce almost roared. "Why, she's the girl that bluffed the secret out of me!"

"You promised in advance, and no excuses go now. The news will be all over town by Friday morning; so why bother to keep up appearances any longer. Meet me at the Canton at seven and check dull care at the entrance."

And before Bryce could protest, Ogilvy had thrown open the office door and called the glad tidings to Moira, in the next room; whereupon Moira's wonderful eyes shone. "Oh, how wonderful!" she exclaimed. "I've always wanted Miss Shirley to meet Mr. Bryce."

Again Bryce was moved to protest, but Buck Ogilvy kicked him in the shins. "Don't crab my game, you miserable snarley-yow. Detract one speck from that girl's pleasure, and you'll never see that temporary franchise," he threatened. And with his bright smile he set out immediately upon the trail of the city council, leaving Bryce Cardigan a prey to many conflicting emotions.

CHAPTER XXIII

FORTUNATELY Bryce Cardigan had Mr. Buck Ogilvy; and out of the experiences gained in other railroad-building enterprises, the said Ogilvy, while startled, was not stunned by the immensity of the order so casually given him, for he had already devoted to the matter of that crossing the better part of the preceding night.

"Got to run a sandy on the Mayor," Buck soliloquized as he walked rapidly uptown. "And I'll have to be mighty

slick about it, too, or I'll get my fingers in the jam."

Two blocks farther on, Mr. Ogilvy snapped his fingers vigorously. "Eureka!" he murmured. "I've got Poundstone by the tail on a down-hill haul."

He hurried to put in a long-distance call for the San Francisco office of the Cardigan Redwood Lumber Company. When the manager came on the line, Ogilvy dictated a message to be telegraphed back to him at the Hotel Sequoia one hour later; this mysterious detail attended to, he continued on to the Mayor's office in the city hall.

Mayor Poundstone's bushy eyebrows arched with interest when his secretary laid upon his desk the card of Mr. Buchanan Ogilvy, vice-president and general manager of the Northern California Oregon Railroad. "Ah-h-h!" he breathed. "I have been expecting Mr. Ogilvy to call for quite a while. Show him in."

THE visitor was accordingly admitted to the great man's presence. "I've been hoping to have this pleasure for quite some time, Mr. Poundstone," Buck announced easily. "But I have had so much preliminary detail to attend to before making an official call that at last I concluded I'd just drop in informally and get acquainted." Buck's blue eyes opened wide in sympathy with his genial mouth, to deluge Mayor Poundstone with a smile that was friendly, guileless, and singularly delightful.

"Glad you did—mighty glad," the Mayor cried heartily. "We have all, of course, heard of your great plans and are naturally anxious to hear more of them, in the hope that we can help promote your enterprise and incidentally our own, since we are not insensible to the advantages when this county is connected by rail with the outside world."

"That extremely broad view is most encouraging," Buck chirped, and he showered the Mayor with another smile. "Reciprocity is the watchword of progress. I might state, however, my associates and myself are not insensible of the fact that the success of our enterprise depends to a great extent upon the enthusiasm of the city of Sequoia; and since you are the chief executive, naturally I have come to you to explain our plans fully."

"I have read your articles of incorporation, Mr. Ogilvy," Mayor Poundstone boomed paternally.

"Then you know exactly what we purpose doing, and any further explanation would be superfluous," Buck interrupted amiably. Again he favored the Mayor with his bright smile, and the latter, now fully convinced that here was a young man whom it behooved him to receive in a whole-hearted manner, nodded vigorous approval.

"Well, that being the case, Mr. Ogilvy," he continued, "what can we do to make you happy?"

"Why, to begin with, Mr. Poundstone, you might accept my solemn assurances that despite the skepticism which, for some unknown reason, appears in the minds of some people, we have incorporated a railroad company for the purpose of building a railroad. We purpose commencing grading operations in the very near future, and the only thing that can possibly interfere will be the refusal of the city council to grant us a franchise to run our line through the city to tidewater." He handed his cigar-case to Mayor Poundstone and continued lightly: "And I am glad to have your assurance that the

city council will not drop a cold chisel in the cogs of the wheels of progress."

Mr. Poundstone had given no such assurance, but for some reason he did not feel equal to the task of contracting this pleasant fellow. Ogilvy continued: "At the proper time we shall apply for the franchise. It will then be time enough to discuss it. In the meantime the N. C. O. plans a public dedicatory ceremony at the first breaking of ground, and I would be greatly honored, Mr. Mayor, if you would consent to turn the first shovelful of earth and deliver the address of welcome upon that occasion."

The Mayor swelled like a Thanksgiving turkey. "The honor will be mine," he corrected his visitor.

"Thank you so much, sir. Well, that's another worry off my mind." With the tact of a prime minister Buck then proceeded deliberately to shift the conversation to crops, finance and national politics, and gradually veered around to an artistic word-picture of the vast expansion of the redwood-lumber industry when the redwood-belt should be connected by rail with the markets of the entire country. Sequoia, he felt convinced, was destined to become a city of at least a hundred thousand inhabitants; with a wave of his hand studded the waters of Humboldt Bay with the masts of the world's shipping. Suddenly he checked himself, apologized for consuming so much of His Honor's valuable time, gracefully expressed his appreciation for the encouragement given his enterprise, and departed.

HALF an hour later the Mayor's telephone-bell rang. Buck Ogilvy was on the line. "I beg your pardon for bothering you twice in the same day, Mr. Mayor," he announced, "but the fact is, a condition has just arisen which necessitates the immediate employment of an attorney. The job is not a very important one, but in view of the fact that we must, sooner or later, employ an attorney to look after our interests locally, it occurred to me that I might as well make the permanent selection now. Would it be imposing on your consideration if I asked you to recommend such a person?"

"Why, not at all! Delighted to help you, Mr. Ogilvy. Let me see, now. There are several attorneys at Sequoia, all men of ability and integrity, whom I can recommend. Cadman & Banes, with offices in the Knights of Pythias Temple, would be just the people, although there is Rodney McKendrick, in the Chamber of Commerce Building—a splendid fellow, Mr. Ogilvy. And if I may be pardoned a dash of paternal ego, there is my son Henry Poundstone, Junior. While Henry is a young man, his career thus far has been most gratifying, although he hasn't had as broad an experience as the others I mentioned, and perhaps your choice had better lie between Cadman & Banes and Rodney McKendrick."

"Thank you a thousand times," Mr. Ogilvy murmured, and hung up. "We thought so, Buck," he soliloquized. "Yes, Cadman & Barnes or Rodney McKendrick may do, but Lord have mercy on the corporate soul of the N. C. O. if I fail to retain Henry Poundstone, Junior. What a wise plan it is to look up the relatives of a public official! Well! Forward, men, follow me."

Henry Poundstone, Junior, proved to be the sole inhabitant of one rather bare office in the Cardigan Block. Buck had fully resolved to give him a retainer of a thousand dollars if he asked

(Continued on page 279)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

JOHN CARDIGAN, redwoods pioneer, now blind and almost defeated by Colonel Seth Pennington, a rival operator, discovers that his son Bryce is in love with the Colonel's niece, Shirley Sumner. The old man shrewdly suspects that she returns his love, but Bryce, who has found her high-spirited and clever in business affairs, doubts it.

However, Shirley has secretly furnished him funds to fight her, by purchasing the Valley of The Giants, thus also thwarting her uncle, whom she is beginning to suspect of sharp practice. Bryce has brought Buck Ogilvy to Sequoia to help build a railroad which will carry his logs to tidewater and Buck promptly falls in love with Moira MacTavish, daughter of an old Cardigan woods-boss.

\$1,000.00 INSURANCE FOR 50 CENTS

As a part of our broad policy of service to readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for *American Agriculturist* all for only \$2.50—just 50 cents more than our special price for a three-year subscription alone.

You May Be Hurt or Killed In a Train or Auto Accident Tomorrow

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

This Tells You What the Policy Will Pay

The North American Accident Insurance Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

Life	One Thousand Dollars (\$1,000.00)
Both Hands	One Thousand Dollars (\$1,000.00)

A Letter to Aunt Janet

A Western Niece Joins the Family Circle

GOOD Morning, Aunt Janet! Please may I have a seat near the circle, to get acquainted with you and the rest of the American Agriculturist family? To introduce myself, I was born away down in south central Illinois where the first time I ever ventured out of doors alone my feet stuck tight in the yellow clay mud until I could not move. Fortunately an older sister came to my rescue, extricated my feet, scraped the sticky clay from my new red shoes as best she could, then lifted me on to the porch.

This same sister, when I wanted to bubble over and say just what I thought, would always remind me to be careful, "for the further it goes, the bigger it gets." My loving, watchful sister sleeps now in the old church yard along with my father and mother and most of my brothers and sisters. Few are left who care, and time drags heavily some times. It is then my pen is a real consolation to me.

I am a farm woman. I own and operate a 360 acre farm, which I did not inherit, but have paid for by the sweat of my brow, so to speak. Besides, I have raised five children, (being left a widow when they were all small) to be fine, respectable citizens. But they have all been lured from the farm by professional work. I am now sole occupant of an eleven room two-story house except my hired help, and they are few and far between. But when those school-teacher daughters come home to spend a short vacation, it is more like an apartment building with about two families in each room.

I keep some beautiful ponies and some high grade Guernsey cows. I have kept sheep that paid me 200 per cent on the money I had invested. They were scarcely any trouble or expense. I never failed to double my flock each year, often more, and as I term it they gave me two crops a year,—the wool in spring, and the lambs in the fall. We raise 50 bushels of oats, 200 bushels of potatoes to the acre and we raise the best of everything with the least work of anywhere in twenty-two states of the Union where I had lived. Hay is our main crop, strawberries, blue berries, cranberries and red raspberries grow wild in profusion.

We raise the finest of garden vegetables and I never get clay mud on my shoes now-a-days. Our soil is a sandy loam, light and easy to cultivate. We are on the farm because we are happiest there. Aunt Janet, if you harbor any doubts, come and see "ye scribe" next summer. While we like it all the year round, we invariably invite our friends to visit us in the summer.

You will see that no man in Wisconsin need be without a home of his own!
MRS. DALE B. MERCER.

HARDY HERBACEOUS PLANTS

BERTHA ALZADA

FARMERS do not like to take the time to plant flowers, and they are very busy at the season when annuals and bedding plants must be planted. Blooming shrubs have their place, but may not be depended on throughout the summer, for few of them bloom except in the spring and fall. The herbaceous perennials make the best hardy bloomers and there are so many kinds and colors blooming at all seasons that the garden can be kept bright all summer. In early spring the bleeding hearts and columbines, irises, violets, pinks, poppies, and peonies are followed by the hardy phlox, gaillardias, shasta daisies, snapdragons, campanulas, funkias, and a dozen others even up to the time the golden glow and pompon chrysanthemums welcome the fall frosts.

Once planted, the hardy herbaceous perennials will need no more attention except to prevent weeds encroaching upon them. They will grow and bloom for many years. The natural method of leaving a covering of leaves to rot on the surface of the ground around their roots from year to year will keep them thrifty unless the soil where they are planted is poor and hard. They will grow where almost any plant will grow and will give more satisfaction when neglected than will most flowers.

The cost of good two-year field grown roots is not great, and in many communities the old favorites are passed around until everybody is supplied.

The Valley of the Giants

(Continued from page 278)

for it, but after one look at Henry he cut the appropriation to two hundred and fifty dollars. Young Mr. Poundstone was blonde and frail, with large round spectacles, rabbit teeth, and swiftly receding chin. Moreover, he was in such a flutter over the arrival of his client that Buck deduced two things—to wit, that the Mayor had telephoned Henry, and that as a result, Henry was in no fit state to discuss the sordid subject of fees. Ergo, Mr. Ogilvy decided to obviate such discussion. He handed Henry a check for two hundred and fifty dollars, which he wrote out on the spot, and with his bright winning smile remarked: "Now, Mr. Poundstone, we will proceed to business. That retainer isn't a large one, I admit, but neither is the job I have to-day. Later, if need of your services on a larger scale should develop, we shall of course expect to make a new arrangement. I trust that is quite satisfactory."

"Eminently so," gasped the young disciple of Blackstone.

"Very well, then; let us proceed to business." Buck removed from a small leather bag a bale of legal-looking documents. "I have here," he announced, "agreements from landowners along the proposed right of way of the N. C. O. to give that company, on demand, within one year from date, satisfactory deeds covering rights of way described in the agreements. I wish these deeds prepared for signing and recording at the earliest possible moment."

"You shall have them at this time tomorrow," Henry promised.

THE head of Henry Poundstone, Junior, was held high for the first time since he had flung forth his modest shingle six months before, and there was an unaccustomed gleam of importance in his pale eyes as he rushed into his father's office.

"By jinks, Dad!" he exulted. "I've hooked a fish at last!"

"Omit the cheers, my boy. Remember I sent that fish to you," his father answered with a bland and indulgent smile. "What are you doing for Ogilvy, and how large a retainer did he give you?"

"I'm making out deeds to his rights of way. Ordinarily it's about a fifty-dollar job, but he handed me out two hundred and fifty dollars. Why, Dad, that's more than you make in a month as Mayor."

"Well, that isn't bad. However, it would be mere chicken-feed in San Francisco."

"Read this," Henry urged, and thrust a yellow telegraph-form under the Mayor's nose. The latter adjusted his glasses and read:

"Imperative building operations commence immediately. We must show good faith to New York friends. J. P. M. insists upon knowing promptly where we stand with Sequoia city council. See immediately and secure temporary franchise to enable us cross Water Street at B Street and build out Front. Your arrangement with Cardigan for use of mill-lock and spur for unloading material from steamer ratified by board but regarded as hold-up. If your judgment indicates no hold-up on permanent franchise, commence active operations immediately upon acquiring temporary franchise. Engage local labor as far as possible. Cannot impress too fully necessity for getting busy, as road must be completed in three years if plans are to bear fruit and time is all too short. Impress upon city council and wire answer to-morrow."

HOCKLEY."

This telegram, as the Mayor observed, was dated that day, and, with a keen eye to minor details, he noted that it had been filed at San Francisco subsequent to Ogilvy's call upon him.

Coloring Easter Eggs

Using Onion Skins in Making Dyes

LAST Easter, I spent the holidays at my uncle's farm in the Berkshire Hills. The day before Easter, when uncle took his weekly trip to town, my aunt said:

"Now George, don't forget to bring home some Easter egg dye, for I don't know what Bobby would do if he woke up and found no colored eggs in his Easter basket."

It was half-past seven when uncle came home that night. His tired arms were laden with packages which he placed one by one on the table. Suddenly a look of abject terror crept into his face.

"Good lands, Mary," he cried, "I forgot the Easter egg dye. I'll drive right back to town and get it."

"You'll do no such thing," said my aunt laughing, "I'll manage somehow."

ing them! We always knew our own for our names were written on them with soap."

So while Aunt Mary washed the supper dishes, uncle boiled the onion skins and I made funny faces on the

FOR THE LITTLE BOY

For the little boy's best—or for every-day, if you prefer—the odd little suit shown in 1627 is something new. Any suitable material would do, though kindergarten cloth for play, velvet or linen for best are suggested.

No. 1627 comes in sizes 2, 4 and 6 years. The four year size takes 2 yards of 36-inch material. Price of pattern, 12c.

Always write your name and address clearly, be sure pattern number and size are included, and send to Fashion Department, American Agriculturist, 461 4th Ave., New York City.

TWO-IN-ONE DRESS

As clever a pattern as we have ever shown has been chosen this week for our readers. It is both an apron and a dress—two separate garments made from the same pattern, No. 1620.

Make the housedress of a plain material with trimmings of checked gingham. The apron is then made of the same checked gingham and buttoned to the dress at the neck and waist.

Then if someone unexpectedly rings the bell, presto! off comes the gingham

apron, and you go to the door in a smart, clean dress.

The pattern No. 1620, which comes in sizes 36, 40 and 44 inches bust measure, is only 12c for the two garments. Size 36 requires 2 7/8 yards 36-inch, with 1 1/2 yard contrasting. Order from Fashion Department, American Agriculturist, 361 Fourth Ave., N. Y. City.

Our new catalogue is as fresh and spring-like as you can imagine. It suggests clever make-overs of last year's clothes or new designs for the fascinating printed and figured materials of this year.

Add 10c to your order for a copy.

Come on in to supper—creamed onions!"

A few moments later, a pile of onion skins by the kitchen sink caught my eye.

"By the way, Aunt Mary," I said: "haven't onion skins some sort of harmless dye in them?"

Aunt Mary thought a moment.

"Why, of course! When we were youngsters, mother always colored our eggs with the juice of boiled onion skins. She would write our names on them with a piece of pointed soap and then dip them in the onion juice and they would come out a beautiful golden color. Then she would hide them, and what good times we children would have find-

eggs with a piece of pointed soap. Then Bobby's Easter basket was filled with shiny golden eggs.

Next morning, when Bobby awoke, his delighted scream rang through the house.

"Oh, muvver, come quick and see the be-yu-ti-ful eggs the Easter bunny brung me!"

I smiled. The onion skins had served their purpose well.—I. R. HEGEL.

MORE ABOUT FRUIT STONES

The American Agriculturist reader who asked for advice in planting fruit stones will be interested in the following account:

"When I was a small girl, my people moved to the prairie of Central Illinois. There were no trees or bushes of any kind. One seemed like a fly in a deep dish. All that could be seen was black ground everywhere one looked. The sky and ground met.

"As we had always lived in sight of hills and trees, we missed them. So in the fall, after the first severe frosts, we rode miles to some timber lands, where we gathered two or three bushels of black walnuts, a few sweet acorns and hickory nuts. The nuts were all left in a pile out of doors, to freeze, and crack the shells. In the spring we picked out the nuts that were open on the end. I tied on two planting bags, nuts in one bag, corn in the other. Father plowed a furrow, I walked after him dropping three grains of corn about three feet apart. In the third hill of corn I dropped a nut. The next furrow he plowed so that the sod he turned over covered the corn and nuts. The trees came up nicely.

"Forty years after, a friend sent me some nuts from those same trees, which

FOR THE LITTLE GIRL

Very smart and comfortable too is little Miss Muffet in her cross-stitched frock. Mother can make it in an afternoon, and add the smart stitching which gives it such an air. We suggest black floss on rose crepe; or delft blue on oyster white linen.

No. 1617 cut in sizes 4, 6, 8 and 10 years. Size 8 takes 3 1/2 yards 36-inch material. Price, 12c stamps or coin. (Wrap coin carefully.)

More cunning children's designs in the new catalogue—Price 10c. Then there are delightful new spring styles for big sister and for mother too. Not forgetting father and brother. Order catalogue and patterns from the Fashion Department.

he said had been bearing for years. Since then I have planted nuts and fruit pits again and again. I always planted them in the ground in the fall and they nearly always came up and grew nicely."—MRS. J. H. BUSKIRK, Lafargeville, N. Y.

A Rain Cape for the Girl

THIS is the time of year when rain abounds and mothers often worry about that long, windy walk to school. But the girl who is snugly wrapped in this all-over cape, which the shopping service will purchase for you, can trudge happily along without fear of catching cold.

The cape is made of rubberized sateen, with hood attached. It is a trade-marked "Bestyette" garment, in

sizes which allow for slipping on over a sweater or other coat, and also make it a good investment for several years' wear.

Colors: Red, brown and navy, plain or plaid silk lining.

Sizes: 6 to 14 years.

Price: \$1.95, postpaid

Order: From Ready To Wear Department, sending check or money order made out to the American Agriculturist. The cape is R. W. 18. Unsatisfactory goods may be exchanged or returned for refund. In such a case, send the garment to the firm from which it came and notify the Fashion Editor.

A BAG FOR FANCYWORK

A capacious, smart-looking arm bag, suitable for shopping, for carrying fancy work or knitting, for school-books and lunch, or for a dozen other practical purposes, is made of crocheted jute lined with a bright-colored silk,

and further embellished with hand-made flowers in brilliant hues.

A bag like this works up very quickly and makes an extremely effective accessory either for everyday use or special occasions.

Full instructions for making the arm bag will be sent upon receipt of 10c in stamps. Ask for E. 8 and address your order to Handicraft Department.

To plump raisins, place them in a shallow pan in a moderate oven for 10 or 15 minutes. Then add to the batter while warm. Another way to plump raisins is to cover them with hot water for 5 minutes and then drain. This latter method also removes the paper from the seeded raisins.

Why they stick

On the ground floor of the telephone building a man worked at the test board. It was night; flood had come upon the city; death and disaster threatened the inhabitants. Outside the telephone building people had long since sought refuge; the water mounted higher and higher; fire broke out in nearby buildings. But still the man at the test board stuck to his post; keeping up the lines of communication; forgetful of self; thinking only of the needs of the emergency.

On a higher floor of the same building a corps of telephone operators worked all through the night, knowing that buildings around them were being washed from their foundations, that fire drew near, that there might be no escape.

It was the spirit of service that kept them at their work—a spirit beyond thought of advancement or reward—the spirit that animates men and women everywhere who know that others depend upon them. By the nature of telephone service this is the every-day spirit of the Bell System.

The world hears of it only in times of emergency and disaster, but it is present all the time behind the scenes. It has its most picturesque expression in those who serve at the switchboard, but it animates every man and woman in the service.

Some work in quiet laboratories or at desks; others out on the "highways of speech." Some grapple with problems of management or science; some with maintenance of lines and equipment; others with office details. But all know, better than any one else, how the safe and orderly life of the people depends on the System—and all know that the System depends on them.

Reviewing the Latest Eastern Markets and Prices

JEWISH HOLIDAYS CALL FOR LIVE POULTRY

THE following Jewish Holidays for the year 5683 will bring demand for live poultry as indicated: PASS-OVER, April 1 and 2; best market days March 26 to 28; kinds most in demand: Fat fowls, ducks, geese and turkeys. LAST PASSOVER—April 7 and 8; best market days April 2 to 4; kinds most in demand: Prime quality of all kinds wanted. FEAST OF WEEKS—May 21 and 22; best market days May 17 and 18. Very little extra demand for this holiday.

Fat heavy fowls are especially desired for these holidays. Jewish housewives store up the food for cooking purposes for a week or two in advance, causing a run on fat fowls. White Leghorn broilers sold last week around 70c each, and lower for stock under 1 lb. each. Best colored broilers went as high as 80c each.

Long Island spring ducks are now coming in limited quantities, and price last week was 36c lb.

DEMAND FOR APPLES FALLS OFF

The market for barreled apples at New York slumped a little last week, due partly to the poor average quality of arrivals. Fancy, large-sized, well-colored stock is still in demand, however. Wholesale prices per bbl., A grade, 2½-inch stock, were:

VARIETY	Best	Fancy	Ordinary
Baldwins...	\$5 @5.25	5.50	\$4.50@4.75
Greenings...	5 @5.25	5.50@5.75	4 @4.25
N. Spy....	8 @9	10	6 @7

DRIED APPLES—APPLE WASTE

Market for evaporated apples and waste at New York was dull last week. Evaporated in 50-lb. boxes, per lb.: Fancy, 12½c; choice, 11½c; prime, 10c. Apple waste in 100-lb. bags: Prime, 3 @ 3¼c lb.; chops, prime, 3¼ @ 3½c; Pomace, 2¼ @ 3¼c.

POTATO MARKET FIRM

The market in New York City for potatoes continued firm. Supplies were light, due to bad roads up-State. Farmers were looking for slightly higher prices.

Carlots of 150-lb. sacks were not offered freely, market from \$2.50 to \$2.60, delivered N. Y. City. Bulk quoted \$1.40 to \$1.50 cwt. As long as bad condition of country roads and car shortage continues, prices are likely to hold up.

Carlot shipments of potatoes from N. Y. State points are now moving more rapidly than at this time last year, although the total for the season is still over 3,000 cars short of last year to same date. Maine shipments so far this season are nearly 8,000 cars short of last season. The total carlot movement of late and early potatoes in the country now is over 5,000 cars ahead of last year.

CABBAGE MARKET STILL FIRM

Supplies of old crop white Danish cabbage continued light from all up-State points, and the market held firm, particularly for fancy, large, sound stock. State white Danish sold, bulk, per ton, in the yards at \$60 to \$65, on March 15, with a few fancy sales at \$70, and some ordinary at \$50 to \$65.

HAY SHIPMENTS NOW HEAVY

The over-supply of hay at New York, which was anticipated in last week's review, came and brought with it a general decline in market prices. Medium and poor stock showed the greatest weakness and prices were very irregular. It is possible that railroad congestion, embargoes and poor roads in the country may retard shipments so that prices will not drop much lower in the next few weeks, especially on better grades. There will undoubtedly be a general tendency to dump hay on the market in the late spring, however, so it behooves the man who still has hay to sell to watch the market closely. See quotations in center of page.

BUTTER MARKET STRONG

Instead of declining, as might be expected at this time of year, butter advanced last week and closed on March 15 very strong. Receipts of creamery at New York last week were about 10,000 packages behind the week pre-

vious. Dealers not only cleaned up fresh arrivals, but disposed of much of previous accumulations. Consumption is good, and there is very little old stock to fall back on. The stock of butter on hand in storage at New York is only about half the reserve stock at this time last year, although receipts since January 1 this year have been greater than in some period last year.

OUTLOOK GOOD FOR CHEESE

Dairymen, whose fluid milk price is affected by the market for cheese, will be glad to know that the prospect is for higher June prices on cheese than last year. The export demand continues active. The increase in the make in Wisconsin has been retarded by recent storms. Stocks of old cheese in the East are light, and were further reduced last week. Total public warehouse holdings in New York, Boston and Philadelphia were less than 2,000,000 lbs. on March 15.

EGG MARKET ACTIVE

With the lower prices of the last week or two, there has been a larger consumption, and the decline in prices

The government restrictions will be to prevent the diversion of such imported wools to other uses, and at the same time to avoid inconvenience to honest importers.

At Boston, the country's largest wool market, Ohio and Pennsylvania fleeces sold at 56 to 57c per lb. for ¾-blood combing, 52 to 53c for ¼-blood, 46 to 48c for ¼-blood and ¾-blood clothing, and 38 to 40c for common. New York fleeces brought 54 to 55c for ¾-blood unwashed, 52c for ¼-blood. Western ¾-blood unwashed sold at 55 to 56c, ¼-blood 50 to 51c. Choice Southern fleeces went at 45 to 46c.

MAPLE SYRUP PROSPECT

The price that will be paid for this year's maple syrup crop is of vital interest just now to every man with a sugar bush. One of the largest buyers of maple syrup in the East says that prices to producers will be higher this year, on an average, than last, due to fact that very little old syrup or sugar is being carried over into the new season. It is reported that Vermont producers are generally being offered now for syrup at the farm \$1.43 for No. 1,

Quotations From Eastern Markets

Hogs, Yorkers.....	9 @ 9½

has been more gradual than usual at this time of year. No eggs have yet gone into storage at New York, and stocks in the wholesale market have been cleaned out fairly well day by day. Last year, at this time, dealers were holding heavy stocks on their floors so as to put them in storage on April 1 and get an April storage mark. Wholesale prices on extra fancy nearby hennerly whites on March 15 last year were 33 to 36c dozen, compared with a top quotation of 40 to 42c on same date this year. The top price on hennerly browns last year in mid-March was 27 to 28c, compared with 38 to 40c this year.

The Easter and Jewish Passover holidays will bring larger demand, especially for large, clean eggs.

Receipts of eggs at New York since January 1, 1923, are over 100,000 cases below receipts last year up to this time.

WOOL MARKET STEADY

Little change was noted in the eastern wool markets during mid-March, Boston and Philadelphia reporting a quiet demand, sales consistent, but in small quantities, and highest quotations on fancy fleeces held with some difficulty. Advices from western country points indicate an increase in contracting for the 1923 clip, which previous to this time has gone slowly. Wool dealers are awaiting the new regulations to come from the government concerning the importation of raw wool to be used for the manufacture of rugs and carpets. Under the new tariff, these wools are admitted duty-free.

\$1.21 for No. 2, and 99c for No. 3. It is generally believed that bulk sugar of the new run will not go lower than 25c per lb.

LIVE STOCK MARKET QUIET

At New York live steers were in light supply; during mid-March prices largely nominal at previous figures. Live calves, however, sold under an easier tone and price, 50c per 100 lbs. lower. Common to choice veals brought 8 to 14c cwt.

Market on hogs, however, was firm for light, medium weight selling at \$9.25 cwt. Sheep also in light supply. Prices nominal at \$5 to \$7 cwt.

FEED MARKET WEAKER

The Buffalo feed market continued dull and weak, and prices on March 14 were \$2 per ton lower on oil meal and 25c per ton lower on 36 per cent cottonseed meal than week previous. Mill feeds did not change. Prices on carlots f. o. b. Buffalo in 100-lb. sacks per ton that date were:

Gluten feed, \$46.55; cottonseed meal, 36 per cent, \$47; oil meal, 33 to 34 per cent, \$47; white hominy, \$32.05. Grains Buffalo, per bushel. No. 2 oats, 52½c; No. 2 yellow corn, 83½c; barley feed, 73@77c.

BAN ON LIVE RABBITS LIFTED

The restrictions that were placed by the N. Y. City Board of Health on the sale of live four-footed animals received in the New York wholesale markets have been lifted in the case of live rabbits. The regulations never did apply to live stock sold at the 60th Street yards for slaughter in regular

packing houses, but were aimed primarily at smaller animals which were frequently slaughtered in butcher shops under such conditions as to constitute a public nuisance. Live rabbits, for which there is a good demand at Easter among Italians and French, may now, however, be handled in the markets as heretofore.

CASH GRAINS AT NEW YORK

The following were cash grain prices at New York March 16:

No. 2 hard winter, \$1.32¾; No. 2 mixed durum, \$1.23¾; No. 2 yellow corn, 91¾c; No. 2 mixed corn, 91¼c; No. 2 white oats, 56c; rye, 93¾c; barley, \$1.82c; buckwheat, \$1.92c; 2.10. At Chicago: No. 2 red wheat, \$1.20½; No. 2 yellow corn, 74@74½c; No. 2 white oats, 45½@46¼c.

Raise Your Chicks in Prairie State Brooders

Have your chick-raising equipment ready before the chicks arrive—avoid the risk of heavy loss. Whether you grow 25 chicks or 25,000 there are practical, dependable, efficient Prairie State Brooders which will exactly meet your needs. Oil-burning hovers and coal-burning stoves. Perfect in design—built on honor—tested and proved—preferred by successful poultry growers. "Prairie State" means efficiency in incubators and brooders.

For Quick Meals Cooked Perfectly use Lorain High Speed Oil Burners

WHERE gas is not available, there is no fuel more convenient, economical and satisfactory for cooking purposes than oil—provided you own an oil cook stove equipped with a good burner.

Of the many types of oil burners on the market, the short chimney type is admittedly far superior. First, because it generates a clean, odorless, blue flame of intense heat. Second, because this intense heat comes in direct contact with the cooking utensil, not ten inches from it.

In the Lorain High Speed Oil Burner, American Stove Company firmly believes it has developed the short chimney type to its highest efficiency. For more than ten years stoves equipped with this burner have been in use in thousands upon thousands of homes, and are giving perfect satisfaction.

The Lorain High Speed Oil Burner is thought to be the best of all short chimney burners because of the intensity of its heat—because it is easy to operate—because of the extreme simplicity of its construction—because it does not easily get out of order—and, because it is *durable*. Read the Guarantee.

The Lorain High Speed Oil Burner has many distinctive features. Its vital part, the inner combustion tube, is not affected by the intense heat.

The burner is constructed to prevent "boil-overs" from reaching the wick, and thereby causing wick-sticking. A patented wick-stop, that is always in adjustment, stops the wick at just the correct height for lighting and burning. The oil-chamber is constructed to prevent wick-sticking, and to make re-wicking easy. Only Lorain Wicks are used. They give extremely long life, a steady flame, and seldom require trimming.

Many famous makes of oil cook stoves now use the Lorain High Speed Burner as standard equipment. These stoves are made of the finest materials, and in most every desired size, style and color. Dealers all over the United States sell Lorain-equipped Oil Stoves. If you cannot locate a dealer near-by please advise us by post card.

AMERICAN STOVE COMPANY

*Sole Manufacturers of Gas Ranges Equipped with the Lorain Oven Heat Regulator
World's Largest Manufacturers of Cooking Appliances*

LORAIN
HIGH SPEED
OIL BURNER

IF GAS is available you'll find no cooking appliance to compare with Lorain-equipped Gas Ranges. One easy turn of the Lorain Red Wheel gives you a choice of 44 measured and controlled oven heats for any kind of oven cooking or baking.

LORAIN
OVEN HEAT REGULATOR

READ the
Lorain Burner
GUARANTEE

LOOK
for the
RED WHEEL

BECAUSE the short chimney oil stove burner produces an intense flame which strikes directly on the bottom of the cooking utensil, the heat generated has, in the past, caused the early destruction of its vital part, the inner combustion tube.

This fault has been completely eliminated in the Lorain High Speed Oil Burner by making the inner combustion tube of "Vesuvius Metal" which is not affected by the destructive action of this intense heat.

Therefore, American Stove Company now gives the following *unconditional* guarantee with each Lorain Oil Burner.

GUARANTEE

Should the inner combustion tube of the Lorain High Speed Oil Burner burn out within 10 years from date of purchase, replacement will be made entirely free of charge.

IMPORTANT

Every oil cook stove equipped with the Lorain High Speed Burner has one interchangeable Giant Chimney which makes any standard Lorain Burner a Super-heating Giant Burner—an entirely new principle in Oil Cook Stove Construction.

Many famous makes of Oil Cook Stoves are now equipped with the Lorain High Speed Burner, including

Are Hog Producers Overdoing It?—Page 289

"Where Shall I Invest My Savings?"

Lock the Door Before the Horse Is Stolen—Bitter Tears Won't Bring Him Back

IT is about time I had another heart to heart talk with the readers of the American Agriculturist about the money they have saved and what to do with it. It is so easy to make a mistake when some glib-tongued salesman comes along and offers stock in a chain store, a finance company or an oil corporation. And the picture he draws of wealth and prosperity sure to follow purchase of his particular stock so often hypnotizes the unwary and then the money is gone forever. It is too late then to write to the paper and in ninety-nine cases out of a hundred nothing can be done.

So let us begin at the beginning and lock the barn door before the horse is stolen. In the first place bear in mind that it took a long time to save the money you want to invest. If any farmer ever got rich quickly by farming the case has never been called to my attention. On the other hand there are countless numbers who got poor quickly by "investing" foolishly. So take plenty of time before entrusting the money it took you so long to accumulate to someone else to keep.

Take Plenty of Time

And above all do not be deceived by the claim that if you do not seize the particular opportunity the moment it is presented to you it will be gone forever. That is always a lie. The only thing that will be gone forever will be the opportunity to lose in that particular way. It is a favorite device of swindlers to tell their prospective victims that the price of the rubbish they are selling is to be advanced on a certain day. That is an infallible indication of fraud. No good investment opportunity passes in a day, or a week or a month.

Second, leave all new enterprises alone. Even though founded in perfect good faith by honorable and responsible men, the chances on the average are all against success. More business men fail than farmers and all new enterprises are essentially speculative. When you are going to invest you want something that is seasoned. That is something which has proved itself over a period of years and the records of which are easily accessible to the average intelligent man.

The swindlers will tell you how much money you could have made if you had invested in Henry Ford's enterprises when he was an unknown and struggling inventor or how much money you could have made if you had put your savings into Graham Bell's first telephone. That is all true, but for every Henry Ford and every Graham Bell there are a thousand others who lose every cent they put in these new ventures. It is a gamble you cannot afford to take. Leave that to the man who doesn't care whether or not he loses.

An Exception to the Rule

There is only one exception to this rule about new enterprises. If a company is being formed in your own locality to engage in some business, the chances for success in which you are capable of estimating, that is an entirely different situation, but it must be a local enterprise, one you can actually see and one the progress of which you can constantly watch. Do not buy stock in some company the operations of which are conducted one hundred to one thousand miles away, simply because some prominent people in the neighborhood have done the same thing.

By GEORGE T. HUGHES

Because the leading lawyer in the adjoining county seat has invested his money, there is no reason why you should do the same. Perhaps he can better afford to lose than you can. It is another favorite device of stock salesmen to give a list of people in the neighborhood who have succumbed to their wiles. It won't do you any good to have them lose their money.

There are some kinds of stock which are peculiarly dangerous and first among all these is the oil stock. Now whatever you do do not buy any oil stock of any kind at any time anywhere. There is no more uncertain

Look Out For the Sharks!

THE newspapers recently carried a pathetic story of an aged couple who invested and lost \$35,000 in worthless stocks. It was every cent they had in the world and all of their lifetime savings. Their money was fooled away from them by the glittering promises of an unscrupulous broker who promised to make them millionaires. The man is seventy years old and blind, and to-day he and his wife are penniless, and were it not for charity, they would be hungry.

It is because the world is full of sharks absolutely without mercy, and full of people who believe that they can get something for nothing that we are constantly printing articles like the one by Mr. Hughes on this page. We are trying to warn our people to keep hold of their money and never make an investment without the advice of a competent lawyer or banker, and without being absolutely sure that their lifetime savings are being put where they will be secure. In almost every neighborhood there is somebody who tried to get rich too quickly and is now filled with hopeless and bitter regret.

Read Mr. Hughes' common sense article and remember it. He is the best financial expert that we can hire and he knows what he is talking about. Following his advice may save you a thousand times the cost of this paper.—The Editors.

business on earth than oil production, not even agriculture. There are good oil companies whose stock has a ready market, but not even they are suitable investments for a farmer.

Don't Send Good Money after Bad

And if you have been so unfortunate as to put your money into one of these fake oil promotions, don't send any more good money after bad. In the general course of events the unhappy "investor" who has put his savings into one of these oil fakes gets a letter saying the company has gone into the hands of a receiver, but that the investment can be saved and the "assets" conserved by exchanging your stock for stock of some other concern which is going to take over the defunct. The only thing necessary is a small additional subscription. Stop right there. It doesn't make much difference how often you exchange one oil stock of this class for another. One is worth about as much as the other, but money is worth saving. So just because you have lost once do not lose twice.

And do not buy something you cannot sell. Nobody wants a perpetual investment. Some day you may want to realize. You may need money either for the farm or for some unexpected emergency in the home, so you want an investment which you can turn into cash or at least one on which you can borrow. And the best way to find out about that is before you buy any security to go to your local bank and ask the president how much money he will loan you on that security if you buy it. Unless he is willing to loan on it you should not be willing to purchase it. For a banker won't loan money on a stock or a bond which he cannot sell in case the loan is not paid.

The local banker is your best adviser in

matters of this kind. He will be glad to help you. And when the stock salesmen tell you that they do not want this particular stock to be monopolized by bankers and Wall Street shut your ears. It is all bunk. They do not want it to be monopolized by the bankers and wealthy men because they know they cannot sell it to bankers and wealthy men. When a man becomes possessed of an overwhelming desire to work for the good of his fellow-men, he doesn't go into the stock selling business. A theological seminary is the place for him.

Finally do not expect too large a return. You cannot get something for nothing in this world and it is almost always true that the higher the return the greater the risk. Just now you can get from 5½ to 6 per cent in sound investments and if you confine yourself to that grade of security you will be better off ten years hence than if you take chances on something that appears to give a higher income.

Now don't hesitate to write to the American Agriculturist if you want information. Very often when a security about which you ask is one of local distribution only, we cannot give any specific advice, but we can and will to the best of our ability try and select safe and conservative securities for the savings of our readers.

Some Typical Inquiries

Financial Department:—Two years ago I purchased some stock in the Crusader Film Corporation, 25 West 43rd Street, New York City. Could you inform me if this company is reliable and if the stock is worth hanging on to? I have never received any interest. The agent says that he will sell my stock for me, but insists that it will be paying big in a very short time.—E. P., New York.

Stock of this kind is speculative in the highest degree and in no way suitable for investment. Unless you can afford to assume the risk involved in the moving-picture business, which even with the best of companies is very high, we think you ought to dispose of the stock if you can.

Buy Something that has a Market

Financial Department:—The Home Correspondence School of Springfield, Mass., are selling a new issue 7 per cent sinking fund preferred stock at \$25 a share. Are they good and safe investment to turn called Victory Loan bonds into, or would Pennsylvania R. R. selling at 47 be safer? Also kindly tell me what you think of the Eugene Christian Vitamin Food Company 8 per cent cumulative preferred stock, and the Parry Oil Company stock of Texas at \$1.50 per share.—G. K. W., Pennsylvania.

Probably the Pennsylvania stock is the best of the investments you name, but even that is not suitable as a substitute for a Victory loan. Certainly our earnest advice is to avoid all oil stocks. At the best they are gambles and at the worst plain swindles. Also it is impossible to appraise preferred stock of a correspondence school or a food company without an analysis of earnings over a period of years which are not available to us. It is our opinion that your best course would be to reinvest in another Government bond. Assuming you will not take this advice because it is too conservative, we can recommend as a sound investment the preferred stock of the Jones & Laughlin Steel Company, which sells about 107¾, pays \$7 a year in dividends and so yields about 6.4 per cent. There is a good market for this stock, so that if at any time you need to use your money you can always get it. Except for the Pennsylvania issue that is true of none of the stocks you speak of.

The Farm Boy and His School

"I Will Study and Get Ready and Maybe My Chance Will Come."—Lincoln

BOYS, did you ever stop to think that some day you will have to make your own living? When that time comes you will want to "make good" won't you? Every boy does. You will want to make a good income and get the most out of life for yourself and others. In making good, one of the first things to decide is "what will I do." The kind of work which you pick out will make a big difference in your chances for success. We are not all fitted to do the same things. Choosing your occupation is one of the most important decisions that you will ever make. Mistakes cost money and are a waste of time and effort. Think it over pretty carefully and make sure that you don't make a mistake in picking out your kind of work.

A Boy's Most Valuable Help

Schools furnish one of the most valuable helps that boys have in choosing and preparing for a vocation. Different kinds of schools get boys ready for different kinds of occupations. Some schools give a general training that prepare for advanced courses and colleges, and for occupations later on. Some boys make up their minds much earlier than others as to what they want to do. Many other boys are undecided until they are young men.

A good rule to follow is to stay in school nearest home, until you have made up your mind what occupation you will choose. It would be fine if every boy could be a graduate of a four-year high school course, but at the present time many boys do not finish the high school, in fact, thousands of boys never enter high school at all.

Here are some of the questions that boys ought to consider in deciding on an occupation: What vocation interests me; will my past experience help me to succeed in this vocation; does this vocation furnish continuous employment; are there good chances for promotion; what pleasures can I have when not actually working; what kind of home life does this vocation afford; is it a healthful vocation; what do my parents and friends think of it; how can I get started in this vocation; what are the chances for making a good income; will it provide employment after middle life?

The farm boy in choosing a life work should not forget that while farming

By A. K. GETMAN

experience is valuable training for any occupation, it is especially valuable for farming. Boys born in towns and cities have hard work to get the skill in doing farm work that farm boys already possess.

George Washington said: "Agriculture is the most healthful, most useful and the most

Successful farming furnishes continuous employment; provides a good living; affords an ideal home; gives healthful employment; combines the use of capital and labor; enables a man to work for himself and not a boss; enables farmer and son to work in partnership; affords good opportunities for the young man to work gradually into a substantial business.

To be successful, one must accomplish what he sets out to attain, assuming of course that his aim is worth while. A boy may aim high or low. To make good, one must have a "goal." Many people fail because they do not have a goal. Others fail because they do not know how to reach the goal that they have set for themselves.

We Must First Choose a Goal

Every boy can succeed if he will first make up his mind what his "goal" is and then make use of the resources at his command in reaching his goal. To be a doctor, to prepare for the ministry, to be a teacher, to be an auto mechanic, to be a dairy or a fruit farmer are examples of goals. Education furnishes the most valuable resources at your command in reaching your goal.

At the age of twenty Benjamin Franklin walked the streets of Philadelphia a poor friendless boy. Ten years later he was rich and twenty years later he was internationally famous. What was the secret of his success? He tells us one of his secrets in his words "An investment in education pay the best interest." Education pays. Training helps one profit by the mistakes and successes of others. A boy in preparing for an occupation is not training for a day only, but for a lifetime.

A boy who is planning to take up farming cannot afford to neglect his preparation. In farming, an education is much more essential now than it was twenty-five years ago. Not all farmers with an education succeed, but the chances of making good are much greater for the young man who has prepared himself for a life work. The study of agriculture enables a young man to profit by what the experiment stations and the successful farmers have discovered, and what good farmers have found to be a good practice. An education prevents many costly mistakes. It helps one to plan the work, and to work the plan. Men may regret doing all kinds

This boy is learning to identify a good laying hen in trap nest studies at the State School of Agriculture at Canton, N. Y.

noble employment of man." Just now, to be sure, the returns which farmers get for their labors are somewhat low, but in a business so essential to the nation's welfare, conditions will undoubtedly be better.

Factors to Be Considered

We have had "hard times" before and then came better times. Here are some of the things that we all ought to think about when considering farming as an occupation:

A farmer needs to be a good mechanic. These students are learning the skillful use of tools in the farm shop in the Agricultural department of the high school at Afton, N. Y.

VOL. 111 March 31, 1923 NO. 13

System of Dairy Recording Needed

NOT the least of the many things that the war did to the dairy business was the elimination of a large number of successful cow testing associations. Some of them had some difficulty in maintaining the full quota of dairies and all found it hard to keep a good cow tester on the job for any length of time. Nevertheless, the interest was continually growing and on this interest it would have been possible in time to have increased the pay for the cow tester, so that better men could have been secured. But the war came and many of the testers enlisted, most of the associations disbanded, and have never been reorganized.

There never was a time when this work was needed as badly as at the present. When times were fairly good, farmers could manage to get along by having their good operations support their poor ones, and their good cows carry the boarders, and still leave a profit; but when things are bad, the poor cows, of course, make them worse.

The cow-testing association enabled a man to put his dairy on a business basis. No other business in the world, except farming, could long endure without a system of accurate records that show where the profits and losses are. Cow testing brings out the relation between what the cow eats and what she returns in milk. It determines the amount of butterfat in the milk, and not the least of its results is that it checks the weights and butterfat tests of the milk dealer. It is a well-known fact that members of cow-testing associations have little difficulty with the milk weights and butterfat tests given by the buyer.

But the old cow testing association was in some ways awkward and difficult in its administration and maintenance. It took too much energy to keep it going. It would seem that there is a real opportunity for somebody to come forward with a simplified plan, whereby dairymen could get a practical check on their dairies without quite so much bother

and energy as is required in cow-testing associations. Perhaps there is an opportunity for dairymen through their organization, the Dairymen's League Cooperative Association, Inc., to form, at very little expense, a great dairy improvement association, to which all its members could belong, working on a simple plan and at little cost, to help farmers test their cows and keep simple records of results of the whole dairy and of the individual animals.

Taxes and the School Bill

NO class of people in the world have more reason that farmers to know that there is nothing surer in the world than death and the taxes. Those who live on the land have always paid more than their share of taxes. Land and buildings are tangible property. They never escape the eye of the assessor. Yet in spite of this injustice of too large taxes, the American farmer has always been the first to vote taxes when he saw the real need, and when he was sure he got value received. His willingness to pay school taxes proves this point. School taxes in America have always been large, compared with those in other countries, because from the date when the first settlers landed to the present day, the American farmer has looked upon money properly spent for education as an investment and not as an expense—an investment in the future of America.

Because the farmer is particularly hard pressed at this time with heavy taxes and other expenses, considerable propaganda has been circulated, causing him to believe that if the School Bill now in the legislature, which contains the suggestions of the Committee of Twenty-one, is passed, it will mean heavy additional taxes for him. What are the real facts?

The bill provides for two general financial changes. The first is equalization of the tax rate, and the second is more State aid for rural schools. The present unit of taxation, the district, is so small and the valuation and wealth so great that it is a common thing to find districts that have a true tax rate that is many times as great as the rate in other districts in the same community. These differences are general throughout the State. Their cause is the great difference in the value of the property that different districts have for the support of their schools. To meet this situation it is provided in the bill that the unit of taxation be changed from the district to the community so that the poor and wealthy districts will pool their resources in their efforts to provide their children with schooling.

This change will not mean that any more money will need to be raised than there is at present for the schools. But it will mean that some farm people who have been paying altogether too much for their schools will pay less, and that some others who have not been paying their share will have their rate slightly increased. However, even these will not pay much more taxes because of the features of State aid for country schools which we explain below. There will be those, of course, who are now paying very little for maintaining the country schools who will object to the equalization, but we are sure enough of the sense of justice and fair play among farm people to believe that very few of these will raise any objection to a move that is absolutely just and fair.

The changing of the tax unit from the district to the community does not mean consolidation, nor change in the boundaries of the school districts. They will remain as they are now and can only be changed by a majority vote of the rural people who live in the district affected.

The other financial change proposed in the bill is a larger feature of State aid. The present system of distribution of State money

for school purposes is such that the rural districts, are placed at a disadvantage. It costs more to maintain the same grade of school in the open country than it does in the centers of population. The farmer should not be penalized because it is necessary for him to carry on his business under these conditions. To meet this condition, the bill provides for a State fund to help the rural schools. In the raising of this State fund, which would be entirely for the benefit of the rural schools, New York City and other centers of population, which would receive no benefit from it, would pay at least 85 per cent.

Statements have been made that the cities were trying to put this bill over on the farmers. Some of the city legislators have stated that the success of the city depends upon a well-educated countryside and that, therefore, they would favor a bill which would help the rural schools, even though the cities had to pay for most of it. But we certainly fail to see any argument that the cities were trying to impose this bill upon the rural districts when in the first place the recommendations in the bill were made by a committee the majority of whom were farmer representatives; and when, in the second place, the cities would have to pay 85 per cent of the tax for the State aid to the rural districts.

Treating Seed Pays Dividends

SOME years ago when the thought was new about treating farm seeds before planting to prevent disease, we urged a neighbor to treat his seed wheat with formalin to prevent smut. Like most of us with anything new, the farmer hesitated because he did not understand just how to go at it, so we volunteered to help.

For days after that seed was treated and in the ground, we did a lot of worrying and lost some sleep for fear that the medicine had been too much for it, and that it would never come up, and you can be sure that it was with a good deal of thankfulness of spirit that we watched that seed come through the ground with a good stand. It eventually grew into a fine crop and was so clean of smut in a neighborhood infested with it, that the farmer finally sold nearly all of it in the form of seed, considerably above the market price. Since that time, most of us have come to realize that a little labor and attention given to the seed before it goes into the ground may mean a considerable difference in extra yield at harvest time.

It will soon be time for the oat seeding and not long to potato planting time. The process of treating these seeds is very simple and returns often make the small effort required the most profitable work of the whole season. Your county agent or college of agriculture will gladly furnish you with the few simple directions.

What Shall We Do For Blacksmiths?

THERE is a bill in the New York legislature which would, if passed, require a blacksmith to have a three years' apprenticeship and to pass an examination for license before he could practice his trade. This bill might do some good in providing better blacksmiths, but we fear that it would have the effect of greatly lessening the number of which there are not nearly enough now.

The coming of the automobile, with the accompanying need of garage service, has taken the services of hundreds of men of mechanical turn of mind and inclination, who might have become blacksmiths. The farmer's need for the blacksmith is just about as great as ever, yet it is becoming more and more of a problem for farmers to get good blacksmithing service at reasonable prices. A farm shop and a garage is one way of partially meeting the demand.

Green Manure Problems

There's Something Besides Plowing Them Under

READER of American Agricul-

By H. E. COOK

through tile drainage, the addition of humus

turist recently wrote me asking the following question: "I want to be sure that I am handling my soil problem right. I seeded ten acres of rye and got a heavy stand last fall. I expect a

H. E. COOK

heavy stand in the spring. I contemplated plowing this rye under and putting in cabbage. It is a very good piece of land, light clay loam, although it packs easily when we have much rain. I usually top-dress with about 10 tons of manure and put on 500 pounds of good fertilizer broadcast. I also sowed some sweet

clover to plow under, but have not had good luck in getting a crop yet. I intend to sow 12 acres to oats this spring to plow under for cabbage next year. I would appreciate your remarks on this practice." The question concerns a farm practice that is most attractive in theory, but may be most dangerous in practice. The principle involved of adding organic matter to the soil is sound, and very few Eastern soils have enough for their best production. Organic or vegetable matter has little or no value in the soil as a carrier of plant food. It may be a positive damage until thoroughly decomposed, has lost its organic form and is recognized as a part of the soil itself.

Absorptive Powers Beneficial

THEN it has the power of absorption, and not only will give water to the plant during periods of scanty rainfall, but aids materially in releasing otherwise insoluble plant food and making it available to the new growing plants. Often this decomposed vegetable matter, called humus, by the way, is the dominant or controlling factor in plant growth, especially on the sandy and sandy loam soils. Sometimes marked results are obtained on the heavy clay soils for a very opposite reason. In the sandy soils, there is an excess of air. The particles are large and the humus fills in the spaces, and so instead of a sand pile, we have a real soil, the particles joined together through which plant feeding rootlets push their way easily and rapidly. If we have a fairly liberal supply of potash, phosphoric acid, lime and nitrogen, surprising plant growth may be depended upon.

Rye is a king among plants for furnishing vegetable matter. It cannot compete with the legumes in adding nitrogen, to be sure, but as a crude, ignorant source of raw vegetable matter, it stands almost in a class by itself. Now comes the danger. Growth is early in the season, and this heavy blanket of rye turned under, practically shuts off the water supply from below and our whole dependence is from the clouds, not a dependable source at that time of the year. In fact, rainfall enough to thoroughly rot this green growth turned down would probably keep the land so soaked that working it would be out of the question. Furthermore, if it was rotted it could not be incorporated with the soil above by a second plowing early enough to put in a cabbage crop. I have plowed the ordinary sod three times in the spring before cabbage setting, and had a fine crop with a minimum of hand labor. There was, however, no large amount of stuff to decompose.

Must be Mixed with the Soil

AFTER we have an abundance of rotted matter, it cannot function until thoroughly mixed with the original soil. Modern study and practice have discovered ways, not always the means, I regret to say, for completely changing the texture of soils. That is, a sandy soil can be so completely mixed with humus as to become a high-grade productive sandy loam and a stiff clay

in some form and perhaps a dressing of burnt lime, after the other treatment mentioned has been executed, will become a clay loam, the very best soil known for general cropping.

These changes, however, were not made from May 1 to June 15, by any means. Maybe several years were required. Often they become economic as well as technical. That is, we will be able to learn the best methods of making them before we shall have saved money enough to pay the cost thereof. We can no more rebuild or repair a soil without extra expense than we can build a new or repair an old building without capital. And so, if I wanted increased humus for a cabbage crop, I would begin fully one year or more before setting the cabbage plants. There is no one best way to do this work.

Some Alternative Methods

YOU can go ahead with the rye plan and summer fallow the land, by plowing and harrowing during the summer, rather expensive, and would leave the land bare during the winter, with a probable loss of some of the nitrates. Another method would be to cultivate the land to June 25 or July 1, then sow to buckwheat, plowing under the crop before it matures, doing some surface cultivation in the fall, preferably with a disk harrow, which would compact the furrow slice and, to some extent, mix it with the green stuff turned under.

If plowed early, not later than September 1, and harrowed as suggested, also harrowing in the spring again, decomposition will be sufficient to permit plowing about June 1, or perhaps a little later. At any rate, there is plenty of time before cabbage setting. By this method, the organic matter will be thoroughly decomposed, weeds will be destroyed and their roots also converted into humus, some fertility made available that otherwise would not have been, and a real cabbage field ready.

There also might be a chance that you could eliminate the nitrogen from the fertilizer, apply acid rock and potash—a mixture of 400 pounds rock and 100 pounds muriate of potash per acre. If the land needs fertilizer you could use 300 to 500 pounds per acre when sowing the buckwheat. Whether nitrogen should be used at the buckwheat sowing time, I am unable to say. Probably 50 pounds of nitrate of soda per acre in addition to the rock and potash, would be worth while.

Cabbage Needs Uninterrupted Growth

CABBAGE growers know how very important it is to have an uninterrupted growth from planting to harvesting. If the growth is checked after heading is underway for lack of water and this period followed by ideal conditions, there is danger of heads cracking.

Filled with humus, your field will carry a more uniform supply of water than without it, and so have a marked effect on a continued growth of the cabbage. In business, in the use of human energy, in cow handling, in the use of power and machinery, one must have reserve force. In business, it is capital; in human energy, it is good digestion, plenty of sleep and always strength and vitality left after a hard strain; in feeding cows, to so feed and care for them that the production of milk does not deplete their strength, and that all our motive power and machinery used shall not normally be taxed quite up to its limits. Under these conditions, we are ready to meet the unexpected with our reserve forces and sustain the shock or overcome the losses where the weaker ones go down charging their defeat to Providence.

The same application can be made to our soils. If we carry a reserve amount of fertility and humus with good drainage, we can be pretty sure of a crop every year. Of course, yields will vary, but we will always be in the safety zone. I know men who would be successful if the time spent in scolding the weather, could be used in increasing the humus in their land and by extra cultivation making potential plant food available.

BERRY PLANTS

Strawberry plants, earliest, latest, largest, most productive and everbearing varieties. Raspberry, blackberry, dewberry, Loganberry, gooseberry, currant, grape plants.

Farm News from Albany

Action Has Started on Indemnities for TB Cattle

TWO bills of particular interest to farmers have been introduced, one providing for the payment of cattle already slaughtered having tuberculosis, and the other to pay for the estimated value of cattle to be slaughtered during the year of 1923 and winter of 1924. The total sum made available to pay for these tubercular cattle, should these bills become law, is \$5,000,000. At the present rate of inspection of herds of the State, it is doubted if this sum will any more than take care of the two years' work. These two bills, should they become law, will make it possible for the farmers to receive their money very soon after the slaughter of their diseased animals condemned during this year.

There are several bills introduced called Blue Sky Bills. The object of these bills is to prevent or protect the public from buying so many fake securities, also licensing brokers in such securities, hoping to eliminate many crooks from taking advantage of small investors. The chief argument against this legislation is that it is impossible to use the licensing power of the State without apparently giving the approval of the State to a man or to the securities that he has to sell. As many securities do have more or less value and as most stock investments are more or less speculative, it is feared that the broker will show that he has the approval of the State by having been granted a license. By the use of this license he would be able to sell in many instances to people who otherwise might fear to purchase stock from any source. This is a question which has many angles, and a remedy is needed, because something should be done to protect people from themselves.

A bill has been introduced adding additional regulations as to the labeling and advertising of substitutes for butter, prohibiting the use of the words butter, creamery or dairy, or the name of any breed of dairy cattle which would lead the public to believe that they were getting a dairy product. Should this bill become law, it will prevent fraud in many instances in the sale of these substitutes, and will strengthen the present law and make prosecution much easier than it is at the present time.

A bill providing for a bond issue of \$15,000,000 for the purpose of improving and extending State Parks and establishing new State Parks and Parkways, in other words, to create a comprehensive and uniform State Park System, has been introduced. If it passes, this bond issue will be submitted to the people of the State for ratification at the annual election this fall. The terms of this bill provide for the amount to be used in connection with each particular park or parks.

The Senate has passed a bill to abolish the Council of Farms and Markets, and to have the Commissioner of Farms and Markets appointed by the Governor. The Senate also passed a bill to repeal the censorship of motion pictures. Both of these bills will have to be passed by the Assembly before they can go to the Governor.

The Judiciary Committee of the Senate held a hearing on the Byrne Bill, which would add a new section to the

State Charities Law, requiring the filing of sworn statements with local authorities by corporations or organizations soliciting gifts of money or property. At present many busy men and women feel that they are being misled in making gifts to societies whose purposes they do not fully understand.

The program before the Legislature for compensation legislation tends to take in more employees of labor. It is very possible, if this is passed, that farmers who have been exempt from the provisions of the Compensation Law may be compelled to carry compensation insurance.

Some 170 bills are in the Legislature relating to automobiles and traffic regulation of same. Many of these laws have to do with the regulation of the automobile traffic along the lines of Governor Smith's recommendations, which would give the sheriff, his assistants, the State Police and local police greater authority as to the enforcement of the present law and canceling of licenses. An important hearing has been held before the joint Senate and Assembly Internal Affairs Committee upon all of this automobile legislation. At this hearing, many representatives of automobile associations were present to insist upon fair automobile laws.

A State Canal Barge Commission to determine what type of vessel is best adapted for use on the State canals would be created under the terms of a bill introduced in the Legislature. Another canal bill would provide for the construction of barge canal terminals at Kingston, Newburgh, Poughkeepsie and Yonkers. These bills represent efforts to get something out of the canal worth the investment to the State.

Assemblyman Witter has introduced a bill which carries an appropriation of \$30,000 to help support the Eastern States Apple and Fruit Exposition to be held next fall in New York City.

The Assembly Ways and Means Committee reported favorably Assemblyman McGinnies' bill appropriating \$2,000,000 toward the construction of New York-New Jersey Vehicular Tunnel. This would be New York State's part toward this construction. This tunnel will provide for traffic under the river by automobiles and trucks.

An interesting bill in the Senate provides "for the giving of greater publicity to the industrial, agricultural, residential and recreational advantages of the State of New York."

We have before mentioned a bill which provides for the consolidation and unity of effort between the Geneva Experiment Station and the Cornell College of Agriculture. The bill would make Cornell the administrative head of both institutions, but would maintain the work practically as at present, both at Ithaca and Geneva, except that it would stop duplication of experiments and research work. This bill passed the Assembly almost unanimously.

Senator Rabenold's bill to amend the Conservation Law, providing every hunter and trapper having license to wear a button in a conspicuous place, has passed both branches of the Legislature and now goes to the Governor.

SPRAYS 10 ACRES A DAY

Just walk and press the nozzle—no work—no trouble.

'SMITH No. 22 BANNER' COMPRESSED AIR SPRAYER

For spraying potatoes, vegetables, fruit trees, grapes and berries. For whitewashing, spraying, disinfectant, fly oil, etc., for washing autos and windows—it does many jobs and does every job well.

Galvanized steel or solid brass tank holds four gallons—a few strokes of pump compresses air enough to discharge contents—brass non-clog nozzle—fine mist or coarse spray as desired.

Sold by hardware, implement and seed stores—Insist on a genuine Smith Banner to insure against disappointment. If your dealer cannot supply you, write us direct.

Vegetable Growers Meet

Indorse Standard Fertilizer Mixtures

NEW YORK vegetable men, through the New York State Vegetable Growers' Association, went on record in no uncertain terms regarding the elimination of surplus fertilizer analyses and the use of high-analysis goods. At the annual meeting at Syracuse University, March 6 and 7, the Association indorsed the five analyses for vegetables which were presented by Prof. E. L. Worthen and which were approved at the conference of college and trade representatives a few weeks ago. Prof. Worthen pointed out the advantage of buying a 5-10-5 instead of the customary 4-8-4, thus securing an increased amount of plant food without increase in the overhead cost of \$13.50 per ton. The Association also indorsed the advertising program which has been undertaken by the Vegetable Growers' Association of America, and which aims to encourage the use of vegetable food through the efforts of local associations. The National plans to supply the locals with posters, lay-outs for newspaper ads, and the like, to be used for such crops and at such times as are likely to be most effective. The G. L. F. was asked to continue its efforts toward the establishment of a vegetable seed service.

PAUL WORK

Officers were chosen as follows: President, R. W. McClure, Syracuse; Vice President, C. E. Haw, Collamer; Secretary-treasurer, T. H. Townsend, Utica; Executive Committee: C. F. Mason, Williamson; L. H. Myers, Albany; Albert Schillroth, Orchard Park; Walter Henry, Eden.

Syracuse Market Prospects

At the banquet of the New York growers at Syracuse, County Agent D. D. Ward told of plans which are taking form for a new market for that city. Syracuse, like many other centers, is assuming increased importance as a distributing point for vegetables. The old market has long been wholly inadequate for handling the city's own supply, and of recent years the crowding has become unbearable. Trucks are crowded in as they arrive, and no alleyways or passages are provided, and one gets out when he can. The new plan calls for the utilization of canal land and also certain adjoining property. The Central New York Vegetable Growers' Association, which comprises the local producers, is actively pushing the project and will have a share in shaping the plans.

Premium List Appears Early

During the past two years Mr. Charles H. Riley of Sennett, N. Y., Superintendent of the Farm Products Department at State Fair, has been instrumental in bringing about a number of marked improvements in the vegetable exhibits. The premium list for 1923 has now been issued. This is as it should be, for the exhibitor may lay his plans in advance of planting time. Also nearly \$800 in premiums has been added. Nearly all of the firsts are now between \$4 and \$10, and the total is nearly \$6,000. The offerings are certainly most attractive and the number of exhibitors should show a marked increase in response.

BARLOW LEAVES OTSEGO COUNTY

Floyd S. Barlow, who has been County Agricultural Agent in Otsego County for several years, has resigned to accept the position of field secretary of the Ohio State Guernsey Breeders' Association. During the time that Mr. Barlow was in office, many changes have been brought about in Otsego County agriculture. Improved cropping systems, improved varieties of crops, livestock improvement have all featured his work. One of the noticeable pieces of

By PAUL WORK

work inaugurated during his term of office was the Junior Extension program. Mr. Barlow is succeeded by H. P. Beales, formerly assistant Farm Bureau Manager in Franklin County, N. Y.

Are Hog Producers Overdoing It?

(Continued from page 289)

country by which purchases were financed in 1921 and early 1922 have dropped off decidedly in the last nine months. In short, Europe appears to be in a poorer position to buy than at any time since the war ended.

Judged by all such standards, a satisfactory export trade in hog products would not be expected. Nevertheless, in the first ten weeks of 1923, a total of 471,235,000 pounds of hog meats and lard were cleared from the United States, compared with only 326,756,000 pounds in the same period last year. Nor is there any indication that it is going out on consignment. The movement is the result of actual buying.

Will the same rate be maintained or will it be increased or diminished later on? About all we can do is to hope that political conditions will become more settled, that sound finance will displace unsound and that Europe will settle down to work out her economic salvation and in that way be able to buy what food products she needs.

Production Costs Higher in 1923

Prices furnish the court of last resort as to the way a supply and demand situation is working out. In the last six weeks, hog prices at Chicago have averaged about \$2 per 100 pounds less than in the same period of 1922. As explained before, however, receipts at the leading markets are hardly likely to show the same increase over last year in the next nine months as they have done since early January.

Quite as important as these matters of prospective supply and demand, is the outlook for production costs. Even if hog prices go lower, if a proportionate drop occurs in the price of corn and other feeds used in pork production, the hog industry may continue to pay big dividends.

Corn prices, however, have shown a distinct upward trend in the last year. On February 1, 1922, the average farm price for corn in the United States was 45.8 cents, rising to 54.8 cents a month later, and to 74.3 cents on March 1, this year. This is the highest since November, 1920. Farm prices for hogs on March 1, on the other hand, were not over \$7.75 compared with \$8.66 a year ago.

With corn going up and hogs going down, naturally the time honored corn-hog ratio has become much less favorable. The chart on page 289 shows the course of this ratio as measured by farm prices for corn and hogs back to 1910. The decline in the ratio in the last fifteen months has been due mostly to a continuous advance in corn prices. The decline in hog prices has helped. Beginning with January, 1923, the ratio has been slightly below the average.

Such a line does not tell the entire story of profit and loss in corn-hog farming. If corn prices are extremely high, hog prices may show a loss as compared with the price of corn, yet raising corn and feeding hogs may still be a profitable type of farming. This seems to have been the case during most of the period from 1916 to 1919 inclusive, in which the corn-hog ratio was below the average much of the time. Corn-hog farming probably was quite profitable, although less profitable than corn farming alone.

On the other hand, in the fall of 1921 when the corn-hog ratio was at the highest point reached in the entire period covered, corn prices were extremely low and hog prices were not high enough to pay cost of production for most of the corn fed.

Corn prices probably are not bringing much if any above cost of production right now and since hog prices

(Continued on page 297)

Use and Misuse of Lights

Separation a Factor in Illumination for Poultry

A RECENT article by O. W. Mapes in these columns brought up some interesting questions which, however, when you consider the fundamental principles upon which illumination is based, are quite easy to answer. It must be remembered that the domestic fowl originated in the tropics, where the length of the days and nights were essentially equal. As a result of this, the reproductive and digestive systems were developed to fit this type of environment.

Bringing the fowl from the tropics to the north temperate zone resulted in the hen taking a vacation in the winter time, when she had least to eat and to do. By overcoming the long nights by the right kind and amount of artificial light, feed, water and exercise, the egg machinery is started, and as long as these factors are kept in the right adjustment the machine runs as long as the fuel holds out. Some hens by inheritance have a better type of frame and a larger fuel tank, so these birds lay more eggs per month and keep at it a longer period of time.

In the case of the flock mentioned in the previous article, the production started to drop off heavily in August, and lights were applied in an effort to keep the birds from moulting. At this point the primary object upon which lighting is based was violated. The birds, without lights, were getting 13 hours of daylight. To add to this was not giving the birds natural conditions. It was very much along the lines that if a teaspoon of medicine is good for the patient, it would be even better to take an entire bottle at one time—and it had just about the same results.

Overlighting a Dangerous Practice

Overlighting hens at the end of a long season of production, which has lowered their vitality, always results disastrously. I remember being questioned at a lecture that I was giving one evening as to what would happen if such a thing were done. I answered that if the feeding remained the same that these birds would come back into production way after birds that had moulted in October had gone out of production, and then back in again. Since we have 12 hours of daylight up to September 19, there is no advantage in using lights before that time.

I know of one successful breeder up-State who gives his hens a little light in October, and a little more in November to the hens, that were still laying up to that time. He continued this until the production of the hens drops to a point where lights are unwarranted. At the same time he keeps in mind these two essential points in connection with illumination:

First—The problems that arise from lights are not in reality lighting problems, but merely questions of feeding. Birds under lights should be fed more heavily of grain than birds that are not under lights. When birds become light in weight, the breaking point in production is near at hand, and if they are not fed correctly at this time the birds will go into a partial moult for repairs.

Secondly—In order to get the best results from illumination, birds should be segregated into groups, according to their age and condition. However, this is not so as to give more or less lights, but rather so that they can be fed scientifically in order that their wants may be fulfilled. For example, in December it is impossible to feed birds that moulted in August the same ration as the birds that just moulted in November and do justice to both.

August Moulter Ready for Forcing

The August moult, if you have handled her correctly, has completed her moult, and is just back into laying. She has a surplus of fat and is ready to be forced by protein feeds. The bird that has just gone into a moult has passed through a long period of production and is in poor flesh and low vitality as the result of this strain. She needs a ration that will build up her body and enable her to store up a surplus so that she will be ready to meet the strain of another year's production and supply eggs that will give

strong, vigorous chicks. This can be done by feeding heavily of grain and by removing some of the high-protein feeds from the mash.

The College of Agriculture is now recommending some illumination for the breeders. If we are introducing normal conditions in regard to lighting pullets, then why not give the hen the best opportunities to recover? Let nature cause birds to go out of production, but give her more than a nine-hour day to regain her flesh, provided, however, that she is fed correctly. This same problem applies equally as well to pullets in the fall.

Lights for the Pullets

Lights should be given to all pullets in November regardless of maturity, but they should be segregated and fed to suit the needs of the group. The immature birds should be fed to produce frame, the larger birds to produce eggs. Yet in so many cases lights are used to push immature pullets into production before they are ready, and as a result these birds never obtain the right size, and their eggs must always be classed as pullet eggs. To go even farther, these are the birds that, because they are not carrying a reserve, break down in mid-winter and require a partial moult to put them back into shape.

In regard to the results Mr. Mapes got from the two pens of breeders and the one pen of culls, I can readily explain why the breeders are not doing very much more than the culls since he sorted these birds. None of these birds, particularly the culls, had done anything since last summer. They had all had a rest, and were in excellent flesh, just waiting for some stimulation to get them started. The addition of animal protein and lights brought them back in short order, since they were now a segregated group receiving the right treatment. It is a well-known fact that even in the poorest of farm flocks that they do well for a short time in the spring. By the use of lights, Mr. Mapes was able to advance his spring, so that the entire flock of both good and poorer birds were thrown into production. However, as the season advances, the cull pen will be the first to drop.

GETTING RID OF RATS IN THE HENHOUSE

A subscriber of the American Agriculturist has inquired how to get rid of rats in a henhouse. The only way we have been able to get rid of the big rats is to shoot them. This is best done in summer, when all feeding must be done in the yards. Get behind a barricade of some kind. The yard wire can be covered with grain bags, and the gun can rest through the wire. I sat all day and shot rats—from sunrise to dark. The next day I made a barricade in the henhouses and shot rats as they stuck their heads through holes in the foundations.

After two days' shooting, the rats did not come into the henhouses or pens, and were pretty well cleaned out. We caught a few middle-sized ones in some wooden-platform breakneck traps in the barn after that, baited with grain. We never could get any in the barrel, or French, trap. It took a year to get a rat that lived under the ell of the house—one that dodged out boldly and caught chickens. One day I placed a large rug in the corner of the piazza, where it joined the house, making the trap as dark as possible and baiting it with a piece of raw chicken. I knew the rat was too big to be held by the trap, so I placed a sharp axe on the piazza, near the trap, and waited.

In a few minutes I heard the trap spring. It took Mr. Rat by the nose, and I promptly cut off his head. He measured 18 inches from his nose to the end of his tail. That is the variety of rats that infested our place, coming from the places of many close neighbors. The rats had got after the grown hens, always attacking them around the vent.

G.L.F. POULTRY RATIONS

Known Ingredients of Known Quality
in Known Proportions

Poultry Feeding
specialists at the colleges of agriculture in the territory served by the Cooperative Grange League Federation have approved the formulas of G.L.F. Rations.

Practical Poultrymen
using the rations the year around report excellent results.

Feed G.L.F. Rations and you will know just what your birds are eating.

See your G.L.F. Agent or write for booklet of formulas.

The Coop. G.L.F. Exchange, Inc.
Syracuse, New York

Five Distinctive Features:

1. G.L.F. Poultry rations contain a larger variety of ingredients than is usually available in your locality.
2. The quality of the ingredients and the pounds of each are stated.
3. The digestible nutrients in each ration are high and the fibre content is low.
4. Dried buttermilk and dried skimmed milk are used and the animal proteins are high.
5. Accurately operated mechanical mixtures make a thoroughly mixed and uniform ration.

Send for free book "Molasses a Feed"

More Milk

Molasses adds materially to the palatability of the ration fed to dairy cows. And that means the cows enjoy their food more—get more nourishment out of it—and that results naturally in more milk. And for horses, hogs and sheep molasses is just as palatable, just as valuable. The price of good molasses is very low now.

Pennsylvania Farm News

To Organize State Federation of Local Associations

THE first State-wide meeting of farm and cooperative market associations of Pennsylvania was held in Harrisburg, February 20 and 21, and marks the organization of a State Federation. The meeting was called at the suggestion of Governor Pinchot and was held under the direction of Secretary of Agriculture, F. P. Willits.

Over 200 delegates represented the various organizations of the State, of which there are at present over 300. Among the prominent speakers were Governor Gifford Pinchot; Secretary of Agriculture F. P. Willits; J. M. Thomas, President of the Pennsylvania State College of Agriculture; and Mrs. F. C. Black, President of the Society of Pennsylvania Farm Women.

Following the address of the various speakers, Deputy Secretary John McKee announced the personnel of various committees based on the following interests: grain and hay, potatoes, fruit, vegetables, tobacco, horses, swine, beef cattle, dairy, sheep raising, and poultry. The various committees reported to the secretary of the conference during the Wednesday session, announcing their resolutions.

Secretary Willits proposed the organization of a permanent federation of farm and cooperative marketing association in Pennsylvania. A temporary committee was appointed to act upon the recommendation. It reported favorably recommending a permanent committee be appointed. The permanent committee for the perfection of the organization of State Federation of Agricultural Organizations of Pennsylvania was appointed by Secretary Willits as follows: C. J. Tyson, Floradale, Pa.; John A. McSparran, Furniss, Pa.; W. S. Wise, Meadville, Pa.; Mrs. Frank B. Black, Garrett, Pa.; R. L. Munce, Washington, Pa.; S. Herbert Starkey, Bustleton, Philadelphia, Pa.; Irving C. Hunt, Wyoming, Pa.; M. H. McCallum, Wernersville, Pa.; A. B. Shenk, Hershey, Pa.; and John M. McKee, Deputy Secretary of Agriculture.

FIGHTING DAYLIGHT SAVING IN PENNSYLVANIA LEGISLATURE

Senator George W. Derrick, of Bedford County, Pa., has introduced a bill in the Pennsylvania Legislature amending the present law establishing Eastern Standard Time as the standard of time for Pennsylvania, which reads as follows:

"Provided that no county, city, borough, township or other municipal subdivision of the Commonwealth shall by ordinance, resolution, or rule adopt a different standard of time for any year or any portion of the year than that herein provided and that all ordinances, resolutions and rules heretofore adopted contrary to this proviso are declared void and of no effect."

The bill has been reported out of committee. It has been recommitted for amendments. The city of Philadelphia has established daylight saving by ordinance. The passage of Senate Bill 217, without further amendment, would end the "moving up of the clocks."

Hearings will probably be held before this measure comes up for a vote.

The Standard Time League in Philadelphia is using every effort to have this legislation passed. It is having some success from other interests who, like the farmer, are greatly inconvenienced and find it detrimental to their business.

EASTERN PENNSYLVANIA NOTES

OLIVER D. SHOCK

The Pennsylvania State Fair Commission has recommended a large tract of land situated in Cumberland County near Harrisburg, as a suitable location for a State Fair Ground.

Winter grains have been benefited by the heavy snows. The total snowfall throughout Eastern Pennsylvania aggregated nearly five feet during this past winter, affording ample protection to crops. Fruit trees are in excellent condition and are reported to be heavily set with fruit buds. An enormous quantity of ice was stored this winter for the coming season's supply. Farmers

have harvested an unusually liberal supply, realizing that regardless of quantity of the ice harvested, artificial ice hardly ever shows any decline in price.

It is reported that some Lancaster county farmers will reduce their tobacco acreage, substituting tomatoes in the crop rotation. Lancaster canning establishments are contracting to purchase the tomatoes at \$12 a ton delivered at the factories. Farmers who have been making a specialty of growing high-grade corn, oats and potatoes, reported a brisk demand for seed for spring planting and at good prices.

Dealers in radio supplies state that fully 2,500 farm homes in Pennsylvania are now enjoying this wonderful new means of entertainment. In many homes it is supplanting the phonograph, especially in isolated localities where personal communication is limited.

CENTRAL PENNSYLVANIA NOTES

J. N. GLOVER

Farm sales are in full blast with from one to four every day this month. Cows and hens sell nearly as high as a year ago, but shoats, horses and implements sell for less money than they did last March. Three-fourths of the settlements are made by notes payable in from seven to twelve months at all farm sales this season, showing that farmers are short of ready cash. The highest prices for cows were paid at the E. K. Dyers sale for registered Holsteins, the top price of the sale was \$270. The total of the sale amounted to \$5,666.

Wheat shows well after being covered with snow for the last two months. Wheat is now bringing \$1.35, which is the highest price paid. Only local millers are paying that price, shippers are paying less. There is a greater demand for oats at 45 cents. Not as much fertilizer will be used as last year, except by potato growers who may even increase the amount as well as the acreage in potatoes. Wheat which has been covered by snow for 10 weeks makes a good showing, since the snow melted so rapidly the past few days.

COOPERATIVE LAW GETS GOVERNOR'S VETO IN NEW JERSEY

W. H. BULLOCK

Party politics so dominated the 1923 session of the New Jersey Legislature, which adjourned its regular business on March 17, that except for vetoed measures, many important bills, among them some of the agricultural measures, were carried to defeat. One important farm bill, however, known as Senate Bill No. 64, which would bring the present cooperative law of the State up to date, was passed by both the Senate and the House, but finally vetoed by the Governor. The special session of the legislature held during the week ending March 24 was to consider only those bills which had passed the legislature and had been vetoed by the Governor. The proposed cooperative law was scheduled to come up for action by the legislature at that session. The organized farm interests of the State, however, are not making any determined effort to pass the measure over the Governor's head.

The matter will come up for intensive action on the part of the farm groups next year. In the meantime, the farmers plan to bring the needs of the revision of the cooperative law more forcefully to the attention of Governor Silzer. The Governor's veto was on the basis that the bill was a price-fixing measure, that it was a combination in restraint of free trade and that it was not solidly desired by the farmers. Dr. Frank App of the New Jersey Federation of County Boards of Agriculture refuted the veto message of the Governor and pointed out the fact that the law in its intent was in accord with the Capper-Volstead Cooperative Marketing Act, which has had country-wide endorsement and that it is patterned after the cooperative marketing laws of 22 States.

No Decrease in League Prices for April

THE directors of the Dairymen's League Cooperative Association, Inc., meeting in New York City March 21st and 22nd, determined the price at which April milk will be sold as follows:

Class 1, for fluid consumption, \$2.80.
Class 2, for cream and ice cream, \$2.20.

Class 3, for milk used chiefly in the manufacture of evaporated, condensed and powdered milk and hard cheese, a differential of 59 cents above the price of milk going into the manufacture of butter (Class 4).

Class 4, for milk used in the manufacture of butter and cheese will be determined as usual by the New York market quotations on these commodities.

There is practically no reduction in these April prices over those received for League milk for March, except that in Class 2, the price is lowered 30 cents, the March price being \$2.50 a hundred. In Class 2, slightly higher differentials are to be charged for skim milk which is manufactured into various by-products.

All prices are for milk having a basic butter-fat test of 3 per cent, and at the 201-210 mile freight zone from New York City.

The Farm Boy and His School

(Continued from page 287)

of things, but did you ever hear of a man who regretted that he had gone to school too long?

The recent study made by the New York State College of Agriculture showed that an education in agriculture helped farmers make more money. The study showed that among fifty farmers who had about the same amount of capital investment, those who had graduated from a College of Agriculture made three times as much, and those who had completed school instruction in agriculture made twice as much as the farmers who had had no training at all in agriculture.

Save for an Education

To most of us the good things of life come only after we have made some sacrifices to get them. We all have to learn to look out for ourselves. You will learn one of the best lessons of life if you look ahead for your future needs and sometimes forego pleasures to-day in order that you may have better pleasures later on. Most boys begin early to earn money. When you have earned it you can spend it for happiness and pleasures to-day or you may save it to buy desirable things by and by. There is no more important thing for which a boy ought to save than for an education. If a boy has made up his mind that he wants an education that will prepare him for farming, he must realize that such an education will cost money. The fact that it does cost, should not discourage boys from wanting an education, for every year thousands of boys "earn their way" through college or school. The fact that an education "costs" something is one thing that helps to make it valuable.

Saving money is largely a habit. To get the habit one needs to start at once and keep everlastingly at it. Ask your father and mother what they think of the habit of saving.

The State and Federal Governments and many local communities have made excellent provision for offering to boys an opportunity for an education in agriculture. In every State in the Union there is a College of Agriculture offering short term and regular and four year courses in agriculture. In nearly 2,000 high schools practical courses in agriculture are offered to boys and young men who desire to follow farming as a vocation. Also in many States special county or State schools of agriculture have been established to offer practical instruction in farming. The six schools of agriculture in New York at Alfred, Canton, Delhi, Cobleskill, Morrisville and Farmingdale are examples of these schools. The schools are here to serve the boys and young men. If you are interested in farming you cannot, in justice to yourself, neglect to get ready. If you want to know more about what the schools can do for you write to the American Agriculturist.

Cows Like It

-It Makes More Milk

1. The World's Greatest Carbohydrate Ration — composed of Wheat, Oats, Corn and Barley, combined with Oil Meal, dried Cane Molasses and Salt.
2. Properly balanced—kiln dried and *exceptionally palatable*—that's why cows like it.
3. Makes more milk because it puts cows in splendid physical condition—enabling them to convert all of the protein part of the ration *into milk*. Permits safe feeding of the maximum amount of any protein concentrate you prefer without danger to cows.

SUGARED

SCHUMACHER FEED

Is Noted for its **LONG TIME Milk Production**

It's digestibility and palatability is assurance against cows getting "off their feed," keeps them at maximum milk producing efficiency *all the time*. Its superiority as a maintenance ration is quickly shown in the better physical condition of the herd and consequently a big increase in milk production.

Beware The Check Raiser!

Recent Matters Handled by the Service Bureau

MORE and more it is the custom to pay bills by checks, and this is a custom which may well be encouraged, because the very fact that a man has a bank account shows that he is a reliable person to trade with. In addition, the return of the check is sufficient proof that the bill has been paid. This method of handling money is usually satisfactory on both ends of the transaction.

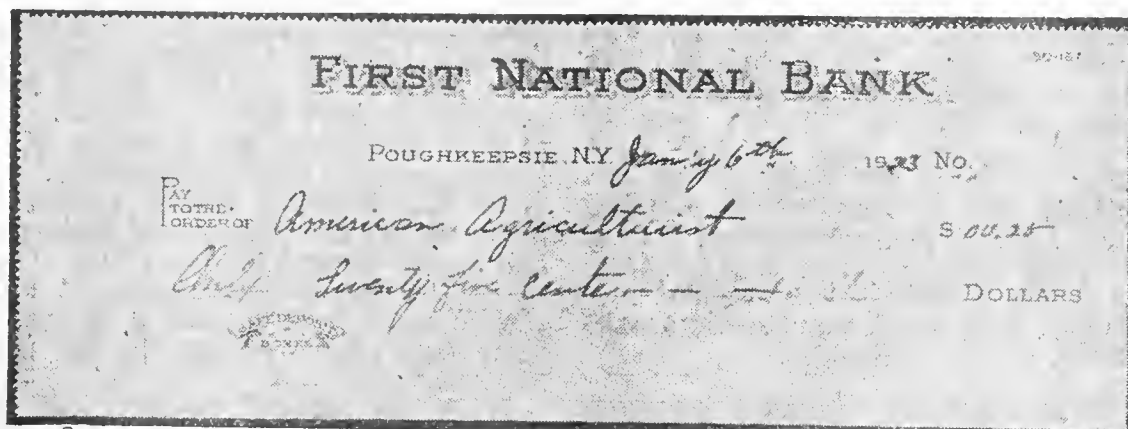

However there are opportunities for mistakes and misunderstanding which do not occur in other methods of transferring money. Thousands of dollars are lost each year because of the prevalence of clever swindlers. The time has passed when men carelessly made out checks in pencil. Naturally the entire legend could then be erased and a larger number of dollars written in. Legibility however is sometimes sacrificed. On the check shown here, it was chosen at random from several thousands re-

established the fact that Mr. Johnson had made this payment and brought to the attention of the company the date and the circumstances. Although they claim that they had not been able to trace the matter and had stopped answering Mr. Johnson's letters, they immediately settled up when the magazine took a hand. Mr. Johnson has written us that a check for the full amount reached him and that the delay of the last four years has finally been ended.

Are Hog Producers Overdoing It?

(Continued from page 292)

are not quite high enough to pay for the average amount of corn, the hog grower should consider which way the ratio line will go in the next twelve

It would not have been difficult for a clever penman to raise this check \$90.25. The word "twenty" would also be easy to manipulate

ceived in this office, the words 25c might easily be interpreted as 75c and the numerals also could be altered. In this case, the signer of the check would be out only 50c, but it might have been dollars and he would not have escaped so easily.

In making out checks therefore always be sure that no room is left before the dollar sign and the numerals for the insertion of another figure, (in the picture for instance you will see that a one could easily have been put after the dollar sign making the check read \$100.25). Also be careful that the words when written out, completely fill the space or are preceded and followed by dashes, or some other method of filling in the blank space.

It pays to take a little trouble, for the check raiser appears where he is least expected and there is seldom any way of bringing him to justice. Recently a prominent bank official stated that at least a million dollars was annually lost by the small depositors of the country through this method of trickery.

\$28 FOR PASTURAGE

"Just received check for \$28. Thank you for your trouble." Mrs. F. L. of New York State pastured four cows for a man who failed to make payment. Although this was a legal collection claim, we were able to aid Mrs. L. in pressing the matter through her attorney, and, as a result of our joint efforts, she received the money.

A DEPOSIT REFUNDED

A New York department store accepted a \$10 deposit from Mrs. J. A. of New York, and, after some time, sent word that because she had not sent the balance she would have to forfeit the money.

Mrs. A. wrote asking that the curtains be sent balance collect, but nothing further was heard from the store, so she referred the matter to us. On the suggestion of the Service Bureau, the store immediately refunded the deposit and apologized for the delay and inconvenience.

AFTER FOUR YEARS OF EFFORT

It took a long time for an Ohio Manufacturing firm to refund \$10.83 which had been paid them in 1919 by our subscriber, Mr. D. E. Johnson, of Reynolds-ville, Pa. However, the Service Bureau

or eighteen months. Will it rise above the average again or stay near its present level or drop considerably below the average as it did in 1912 and 1915 after the previous high points?

Taking the probable trend of corn and hog prices in the next six months into consideration, the evidence suggests that the ratio will show but little change of position for a while, but is more likely to go lower than to rise above the average. By the end of 1923 when the increased spring pig crop begins to come on the market, it might drop considerably below the average unless there is an unusually large corn crop or hog production fails to show the increase indicated.

If this expectation is correct, what does it mean to the hog grower? Are the following conclusions justified?

1. This is not the time for general and indiscriminate expansion of hog production.

2. Since the cost of producing pork varies greatly in different localities or on different farms in the same locality, it is advisable for all to keep their cost marks as low as possible by the use of improved blood, scientific feeding, sanitation to prevent losses by disease and similar means.

3. Those hog growers whose production costs are low, and who can make money with hogs when the average breeder is losing, have nothing to fear. They can go ahead sawing wood as usual and avoid the loss from liquidating breeding stock, leaving equipment unused or altering the type of farming.

4. Those whose costs are relatively high had better "watch a little out" and perhaps breed fewer sows for fall litters. This is the class that must decrease production if it develops that overexpansion has taken place.

I have taken the *American Agriculturist* for over five years, and couldn't get along without it.—JOSEPH L. CLARE, Niagara County, N. Y.

The Valley of the Giants—By Peter B. Kyne

"A-H-H-H!" breathed His Honor. "That accounts for his failure to bring the matter up at our interview. Upon his return to the hotel he found this and got busy at once. By Jupiter, this looks like business. Henry, how did you come into possession of this telegram?"

"It must have been mixed up in the documents Ogilvy left with me. I found it on my desk when I was sorting out the papers, and in my capacity of attorney for the N. C. O. I had no hesitancy in reading it."

"Well, I do declare! Wonder who Hockley is. Never heard of that fellow."

"Hockley doesn't matter," young Henry declared triumphantly, "although I'd bet he's one of those heavyweight Wall Street fellows and one of J. P. M.'s vice-presidents, probably. J. P. M., of course, is the man behind?"

"Who the devil is J. P. M.?"

Henry smiled tolerantly. "Well, how would J. Pierpont Morgan do for a guess?" he queried.

"Hell's bells and panther-tracks!" Mayor Poundstone started as if snakebitten. "I should say you *have* hooked a big fish. Boy, you've landed a whale!" And the Mayor whistled softly in his amazement and delight. "By golly, to think of you getting in with that bunch! Tre-mendyous! Per-fect-ly tree-mend-yous! Did Ogilvy say anything about future business?"

"He said if I proved satisfactory, he would take me on and pay the customary retainer given all corporation attorneys."

"Well, by golly, he'd better!"

"If I could guarantee him that temporary franchise, it might help me to get in right with J. P. M. at the start," his hopeful suggested.

"Guarantee it!" his father shouted. "Guarantee it! Well, I should snicker! We'll just show J. P. M. and his crowd that they made no mistake when they picked you as their Sequoia legal representative. I'll call a special meeting of that little old city council of mine and jam that temporary franchise through."

"I'll tell you what let's do," Henry suggested. "I'll draw it up to-night, and we'll put it through to-morrow at, say, ten o'clock. Then I'll just casually take it over to Mr. Ogilvy. Of course he'll be surprised and ask me how I came to get it, and—"

"And you *look* surprised," his father cautioned, "as if you failed to comprehend what he's driving at. Make him repeat. Then you say: 'Oh, that! Why, that's nothing, Mr. Ogilvy. I found the telegram in those papers you left with me, and concluded you'd left it there to give me the dope so I could go ahead and get the franchise for you. Up here, whenever anybody wants a franchise from the city, they always hire an attorney to get it for them, so I didn't think anything about this but just naturally went and got it for you. If it ain't right, why, say so and I'll have it made right.'" Old Poundstone nudged his son in the short ribs and winked drolly.

"Leave it to your truly," said Henry.

His father carefully made a copy of the telegram.

"H'm!" he grunted. "Wants to cross Water Street at B and build out Front Street. Well, I dare say nobody will kick over the traces at that. Still, come to think of it, Pennington will probably raise a howl about sparks from the engines setting his lumber piles afire."

"HE'LL be dead against it," Henry declared. "I know, because at the Wednesday meeting of the Lumber Manufacturers' Association, Pennington said the N. C. O. ought to be discouraged."

"Then we won't tell him anything about it, Henry. We'll just pull off this special session and forget to invite the reporters; after the job has been put over, Pennington can come around and howl all he wants. We're not letting a chance like this slip by us without grabbing a handful of the tail-feathers, Henry. No, sir—not if we know it."

"You bet!" said Henry earnestly.

And it was even so. The entire council was present with the exception of Thatcher, who was home ill. His running mate Yates offered no objection to the motion to grant a sixty-day temporary franchise. He did point out to the board, however, that many prominent citizens had warned him of the danger of lending official aid to a passel of professional promoters and fly-by-nights; that after all, the N. C. O. might merely be the stalking-horse to unload the undesirable timber holding of the Trinidad Redwood Lumber Company. It was Mr. Yates' opinion that for the present a temporary franchise for thirty days only should be given; if the N. C. O. exhibited indubitable signs of activity, he would gladly vote for a thirty-day extension to enable the

matter of a permanent franchise to be taken up in regular order.

This amendment met with the unqualified approval of the Mayor, as carefully announced to the other members of the Solid Four. The fact of the matter was, however, that he was afraid to oppose Yates through fear that he might grow cantakerous and carry his troubles to the Sequoia *Sentinel*—a base trick he had been known to do in the past. After explaining the advisability of keeping secret for the present the fact that a thirty-day franchise had been granted, His Honor submitted the amended motion to a vote, which was carried unanimously.

AT eleven-thirty Thursday morning, therefore, young Poundstone, having worked the greater part of the previous night preparing the deeds, delivered both deeds and franchise to Buck Ogilvy at the latter's hotel. It was with difficulty that the latter could conceal his tremendous amazement when Henry casually handed him the franchise. True, he had slipped the telegram among the contracts as bait for Henry and his father, but in his wildest flights of fancy he had not looked for them to swallow hook, line and sinker.

When he could control his emotions, Mr. Ogilvy gazed approvingly upon Henry Poundstone. "Mr. Poundstone," he said solemnly, "I have met some meteoric young attorneys in my day, but you're the first genuine comet I have seen in the legal firmament. Do you mind telling me exactly how you procured this franchise—and why you procured it without explicit orders from me?"

Henry did his best to look puzzled. "Why," he said, "you left that telegram with me, and I concluded that you regarded it as self-explanatory. I didn't want to bother you with details, so I just went ahead and filled the order for you. Anything wrong about that?"

"Certainly not. It's perfectly wonderful. But how did you put it over?"

Henry smirked. "My dad's the engineer," he said bluntly. "If thirty days ain't enough time, see me and I'll get you thirty days more. And in the meantime nobody knows a thing about this little deal. I figured Colonel Pennington might try to block you at that crossing so I—"

Buck Ogilvy extended his hand in benediction and let it drop lightly on Henry Poundstone's thin shoulder. Henry quivered under that gentle accolade and the great Ogilvy made a portentous announcement.

"My dear Poundstone," he said earnestly, "I am not a man to forget clever work." He smiled his radiant smile. "You understand, of course, that I am speaking for myself and can make you no firm promises. However—"

He smiled again. "All I have to say is that you'll do!"

"Thank you," said Henry Poundstone, Junior. "Thank you ever so much."

CHAPTER XXIV

AN experience extending over thirty years had convinced Colonel Seth Pennington of the futility of wracking his brains in vain speculation. In his day he had been interested in some small public-service corporations, which is tantamount to saying that he knew peanut politics. Frequently he had found it of great profit to him to know

exactly how certain men spent their time and his money, and naturally he had to delegate somebody else to procure this information for him. When, therefore, the Northern California Oregon Railroad commenced to encroach on the Colonel's sleep, he realized that there was but one way to conserve his rest and that was by engaging a specialist in the unravelling of mysteries.

The information forthcoming from Dun's and Bradstreet's was vague and unsatisfying. For the present the corporation had no office, its destinies in San Francisco being guarded by a well-known attorney who had declined to make any statement regarding the company but promised one at an early date. The board of directors consisted of this attorney, his two assistants, his stenographer, and Mr. Buchanan Ogilvy.

"It looks fishy to me," the Colonel commented to his manager, "and I'm more than ever convinced it's a scheme of that Trinidad Redwood Timber Company to start a timber-boom and unload. And that is something the Laguna Grande Lumber Company does not view with favor, for the reason that one of these days those people will come to their senses and sell cheap to us. A slight extension of our logging-road will make that Trinidad timber accessible; hence we are the only logical customers and should control the situation. Telephone the San Francisco office to have the detective-agency send a couple of their best operatives up on the next steamer."

When the operatives reported, the Colonel's orders were brief and explicit. "I want to know all about a man named Buchanan Ogilvy, who is up north somewhere procuring rights of way for the Northern California Oregon Railroad. Find him. Get up with him in the morning and put him to bed at night. Report to me daily."

Buck was readily located in the country north of Arcata, and one of the operatives actually procured a job as chainman with his surveying gang, while the other kept Ogilvy and his secretary under surveillance. Their reports, however, yielded the Colonel nothing until the first day of Buck's return to Sequoia, when the following written report caused the Colonel to sit up and take notice. It read:

"OGILVY in room until 12 noon. At 12.05 entered dining room, leaving at 1 p. m. and proceeding direct to office of Cardigan Redwood Lumber Company. Operative behind a lumber-pile at side of office so as to command view of interior. From manner of greeting accorded Ogilvy by Bryce Cardigan, operative is of opinion they had not met before. Ogilvy remained in private office half an hour, spent another half-hour conversing with young lady in general office. O. then returned Hotel Sequoia, where he wrote letters in writing-room. At 3 p. m. called to telephone. At 3:02 left hurriedly for Cardigan Redwood Lumber Company's office. Entered private office without waiting to be announced. Emerged at 3:12, walking slowly in deep thought. At B and Cedar streets stopped suddenly, snapped fingers and started walking rapidly in the manner of one arrived at a decision. At 3:24 entered the telephone building and placed a long-distance call. Operative at counter close by heard him place call, for the Cardigan Redwood Lumber Company in San Francisco.

"Concluded conversation at 3:32 and proceeded to the city hall, entering the Mayor's office at 3:43 and emerging at

4:10. Returned to Hotel and sat in the lobby until handed a telegram at 4:40; whereupon he entered the telephone-booth and talked to someone, emerging at 4:43 to go to his room. He returned at 4:46 and hurried to the law-office of Henry Poundstone, Junior. With Poundstone until 4:59, when he returned to Hotel, carrying a small leather grip.

"Arrived at the hotel at 5:03 and went to his room. At 6:45 entered a public automobile in front of the hotel and was driven to No. 846 Elm Street. The brunette young lady who works in the Cardigan Company's office emerged and entered the car, which then proceeded to No. 38 Redwood Boulevard, where the brunette young lady alighted and entered. She returned at 7 sharp, accompanied by a young lady whom she introduced to O. All three were then driven to the Canton restaurant and escorted to a reserved table in one of semi-private rooms. At 7:15 Bryce Cardigan entered the restaurant and was escorted by the waiter to the table occupied by O. and party.

"At 9:30 entire party left restaurant and entered a Napier car driven by a half-breed Indian hailed as George. O. and the brunette young lady were dropped at 846 Elm Street while Cardigan and the other young lady proceeded directly to No. 38 Redwood Boulevard. After aiding lady to alight, Cardigan talked with her a few minutes at the gate, then bade her good-night and returned to the automobile and was driven home.

"Upon returning to Hotel Sequoia, found O. in hotel bar. Saw him to bed at 10 sharp."

NEEDLESS to relate, this report had a most amazing effect upon Colonel Pennington, and when at length he could recover his mental equilibrium, he set about to analyze the report, with the following conclusions:

(1) His niece Shirley Sumner was not to be trusted in so far as young Bryce Cardigan was concerned. Despite her assumption of hostility, the Colonel was now convinced that she had made her peace with him and had been the recipient of his secret attentions right along. The Colonel was on the verge of calling his niece up to demand an explanation, but on second thought decided to wait a few days and see what his gum-shoe men might have to report further.

(2) The N. C. O. was still a mystery, but a mystery in which Bryce Cardigan was interested. Moreover, he was anxious to aid the N. C. O. in every way possible. However, the Colonel could understand this.

(3) The N. C. O. was going to make a mighty bluff, even to the extent of applying for a franchise to run over the city streets of Sequoia. Hence Ogilvy's visit to Mayor Poundstone. Hence, also, his visit to young Henry Poundstone, whom he had doubtless engaged as his local representative in order to ingratiate himself with the young man's father. Coarse work!

(4) Ogilvy had carried a small leather bag in from Henry Poundstone's office. That bag was readily explained. It had contained a bribe in gold coin and young Henry had been selected as the go-between. That meant that Mayor Poundstone had agreed to deliver the franchise—for a consideration; and like the smooth scoundrel he was, he wanted his bit in gold coin, which could not be marked without the marks being discovered!

(Continued on page 299)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

JOHN CARDIGAN, redwoods pioneer, now blind and almost defeated by Colonel Seth Pennington, a rival operator, discovers that his son Bryce is in love with the Colonel's niece, Shirley Sumner. The old man shrewdly suspects that she returns his love, but Bryce doubts it.

However, Shirley has secretly furnished him full information, and he is purchasing the Valley of The Giants, thus also the uncle, whom she is beginning to suspect of sharp practice. Buck Ogilvy to Sequoia to help build a railroad which logs to tidewater and Buck promptly falls in love with daughter of an old Cardigan woods-boss. He pleases gaging his son as lawyer for the N. C. O.

\$1,000.00 INSURANCE FOR 50 CENTS

As a part of our broad policy of service to readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for *American Agriculturist* all for only \$2.50—just 50 cents more than our special price for a three-year subscription alone.

You May Be Hurt or Killed In a Train or Auto Accident Tomorrow

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

This Tells You What the Policy Will Pay

The North American Accident Insurance Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

What Is a "Loop" Antenna?

A Radio Talk on an Indoor Aerial

WITH the development of radio frequency amplification a concentrated form of aerial known as the "loop" has come into use. Essentially, a loop consists of a wooden or brass framework from two to four feet square, about which is wound in spiral or box-like style a number of turns of wire.

Sometimes the loop is mounted vertically on a shaft which passes through its center, and others are mounted on an extension of one of the cross-arms, diamond shape. The loop is always arranged so that it may be rotated about its axis. The two forms of mounting are equally effective.

How does the loop function? A loop is nothing more or less than a coil of wire made up into a larger form than is customary for coils which are used in tuning a receiving set. Indeed, where there is a broadcasting station within a mile or two, it is often possible to pick up some of the speech and music without any aerial at all. The coil of the set is sufficient to intercept the waves and cause a response in the headphones.

Locating the Loop

TO make such a scheme operate satisfactorily, the coil is made larger for the express purpose of acting as a concentrated aerial. When the loop is moved to such a position that the waves from the broadcasting station come parallel to it, in other words, when the flat plane of the loop is pointed directly toward the station, the signals are received with the greatest intensity.

The wave first strikes on side of the loop and induces a current in its wires, just as we have found it to do in the case of the antenna. Then a bit later it comes to the other side, which is a little further from the source of the waves than the side of the loop which the wave first encountered. Here a current is induced in the other direction. In this manner, current oscillating back and forth is set up in the loop, and it may be applied to the detector tube. Since the loop is in reality a coil such as the secondary winding of a vario-coupler, it is necessary to provide some method by which it may be tuned to the respective wave lengths used by the different stations. This is done by a variable condenser of about 23 plates, connected to the two ends of the loop's winding.

Now, when the loop is turned so that it is at right angles to the direction of the broadcasting station, the signals disappear. Why? Because the wave strikes the two sides of the loop exactly at the same instant, and the current in one side is nullified by that in the other. Right here we may recognize one of the great advantages of the loop over the outside aerial. The latter is only slightly directive, but with the loop, the remarkable directional properties enable us to tune out or select between two stations operating on exactly the same wave length, providing they are in different directions from the set.

A Valuable Property

THIS property of the loop was invaluable during the World War, when loops were used by the French and American armies to locate enemy radio stations both on the ground and on board aeroplanes. Loop stations were erected ten or twenty miles apart, and "bearings" taken when the enemy stations were transmitting. The directions obtained by the several stations were plotted on a map at the central office, and the position of the station indicated by the point at which all the lines crossed. To-day this system is employed by the naval "Compass" stations, and ships' positions are furnished to captains who are a bit uncertain during fogs and thick weather.

Another point in favor of the loop is its extreme selectivity. One or two degrees movement of the condenser serves to tune out a station altogether and pick up another one. This is especially useful when distant or "DX" reception is being attempted while a nearby station is operating on almost the same wave

length. Radio frequency amplification will be covered in the next radio article in the *American Agriculturist*, with especial emphasis on the "reflex" circuit which has won its way into the broadcast field.

In this circuit, which may be used for either loop or outside antenna, the vacuum tubes are used along with a crystal detector in such a manner that long-distance work is provided by radio frequency, while signal strength is given by audio frequency, both on the same tubes.

The Valley of the Giants

(Continued from page 298)

Ogilvy had called first on the Mayor to arrange the details; then he had called on the Mayor's son to complete the transaction.

(5) If a franchise had been arranged for and the bribe already delivered, that meant the prompt and unadvised commencement of operations. Where (the Colonel asked himself) would these operations begin? Why, close to the waterfront, where materials could be landed from the steamer. At whose mill-dock would those materials be discharged? Why, Cardigan's, of course. Yes, the N. C. O. was going to carry its monumental bluff to the point of building a mile of track through town. . . . No—no, they wouldn't spend that much money on a bluff; or bribe Poundstone unless the road was meant. And was it a common carrier, after all? Had Cardigan in some mysterious manner managed to borrow enough money to parallel the Laguna Grande Lumber Company's loggingroad, and was he disguising it as a common carrier?

The Colonel mopped his brow and concentrated further. If the N. C. O. was really going to start, in order to move its material from the Cardigan dock to the scene of operations it would have to cut the Colonel's tracks somewhere on Water Street. That was it! They were planning to get a jump-crossing in before he should awake to the situation; and once the crossing should be in, they could laugh at Colonel Pennington!

"The scoundrels!" he murmured. "I'm on to them! Cardigan is playing the game with them. That's why he bought those rails from the old Laurel Creek spur! Oh, the sly young fox to fool me into thinking he wanted those rails for an extension of his logging-system! Oh, what a blithering idiot I have been! However, it's not too late yet. Poundstone is coming over to dinner Thursday night, and I'll wring the swine dry before he leaves the house. And as for those rails."

He seized the telephone and fairly shouted to his exchange operator to get Jules Rondeau.

"That you, Rondeau?" he shouted when the big French Canadian responded. "What has young Cardigan done about those rails I sold him from the abandoned spur up Laurel Creek?"

"He have two flat-cars upon ze spur now. Dose woods-gang of hees she tear up dose rails from ze head of ze spur and load in ze flat-cars."

"The cars haven't left the Laurel Creek spur, then?"

"No, she don't leave yet."

"See to it, Rondeau, that they do not leave. Understand? Cardigan's woods-boss will ask you to send a switch-engine up to snake them out late this afternoon or to-morrow afternoon. Tell him the switch-engine is in the shop for repairs or is busy at other work—anything that will stall him off and delay delivery."

"Suppose Bryce Cardigan, she comes around and say 'Why?'" Rondeau queried cautiously.

"Kill him," the Colonel retorted coolly. "It strikes me you and the Black Minorca are rather slow playing even with young Cardigan."

Rondeau grunted. "I theenk mebbe so you kill heem yourself, boss," he replied enigmatically, and hung up.

When writing advertisers be sure to say
You saw it in the *American Agriculturist*

Give a Thought —TO— Advertising

We are devoting this column to a subject that during the past score of years has caused a great deal of comment and discussion. Agricultural advertising, a branch in the big advertising field, has already played a large part and is going to play an even larger part in the future.

It may interest you to know that American Agriculturist is being used as a laboratory test in the course of agricultural advertising now being given at the State College of Agriculture at Cornell University. The class made a study of the relative value of advertising in the issue of February 17 and decided that the best advertisements in the order of their merit were those of the Harder Silo and Dr. Hess's Pan-a-ce-a. The others mentioned in their order as being unusually good ads were the following:

Unadilla Silo
Royster Fertilizers
G. L. F. Poultry Feed
Le Roy Plow Company
International Harvester
Hillpot Chicks
Troy Chemical Company
Melotte Separator
Planet Jr. Seeder

The class has already reported on another recent issue. The results of that report will be published in this column in the near future.

By reading advertisements a man can learn the merits of different articles and decide which is the best for him to buy. He isn't limited to any one thing. He has the products of the whole country to choose from. The goods of the world are brought right to his doorstep—if he but reads the advertisements.

The world knows the truth of the saying: "It pays to advertise," but there's another saying just as true but not so familiar, and that is: "It pays to read advertisements."

That's why we've started this column. To give our subscribers a better acquaintance with advertising and what advertising does.

For advertising plays a mighty important part in every farm paper. Your subscription pays only a very small part of the cost of publishing the papers you get. Advertising pays the biggest part of the bill. If it wasn't for the advertisements, your magazines and papers would cost about five times as much as they do.

So it's worth while to "Give a thought to advertising." That's why we gave this column that name. We want you to benefit as much as possible by our advertisements. We want them to pay you as well as us. For when you come right down to rock-bottom facts you are the ones we must satisfy. We publish this paper for your pleasure and your benefit.

And so now, every week, this column will be given to some thought about advertising that will interest you. We will welcome suggestions and comments on advertising in general. Tell us what you think about it. And most important of all, tell us what you think of the advertising in the American Agriculturist. Just address the Advertising Manager.

And remember: "It pays to give a thought to advertising."

Hot Lunches Make Better Children

Practical Suggestions for School Meals—Other Household Pointers

A FEW weeks ago the Home-Makers' page had a peep into the lunch box of little Johnnie Brown, a schoolboy whose mother has given much time and thought to putting up the lunches that her small son finds so "easy to eat." But in spite of her skill in providing for hungry Johnnie, Mrs. Brown never felt quite satisfied that he could not have the wholesome hot dish which her common sense, as well as her study of food values, told her would probably mean an improvement in Johnnie's report card as well as in his physique.

Johnnie goes to a one-room country school. He eats his lunch on his desk, and so do the other boys and girls. Some bring more than others, and "swapping" often destroys the "balanced meal" a mother has planned. Then, too, some of the boys and girls bring skimpy lunches, while a few turn up quite often without any. Mrs. Brown, whose motherliness extends outside her own family, decided that something should be done to give every child in the school a good hot dish at noon.

Beginning on a Small Scale

At first a hot dish was served only twice a week, for the young teacher wished to establish a system of cooking and service. She started with hot chocolate, which the girls helped her prepare, and which the boys, in relays, passed around. The milk came from the fine herd of a neighbor and was purchased at cost. A charge of two cents a cup was made, and the son of a man who had opposed the lunch idea was appointed treasurer. This proved a wise bit of strategy! After the lunch the girls cleared up and the boys "wiped."

It soon proved that it was better to divide both boys and girls into three groups, each group to help for one week, the others to be served till their turn came. The second lunch of the first week consisted of a creamed pea soup, made from dried vegetables given by a mother; the milk was obtained from a farmer, and the charge was 3 cents, making 5 cents for the week. The school soon ran on a daily hot dish basis. A charge of 15 cents a week was made and, in a few cases, remitted. The committee felt that every child should have the dish and that those who could not afford it probably especially needed it.

Needless to say, it took many weeks to get things working smoothly; there were discouragement and setbacks, but Mrs. Brown, surveying some surprising figures furnished by the County Home Bureau on underweight and malnutrition among country children, felt that it was worth it. The fact that one-third of the children of the nation are undernourished did not impress her neighbors until she showed that country children suffered as much as city ones, and that some Ohio women, working to make hot lunches a feature of every rural school, had cut the proportion of tea and coffee drinkers among 2,818 children from 75% to 45%, with a corresponding increase in milk drinkers and corresponding health improvement.

The School Teacher Will Help

Johnnie's teacher, a young girl just starting in with her first school, had plenty of work on her hands, but consented to help. Some parents agreed to help too; others, alas, were indifferent or even opposed. "What was good enough for us is good enough for our children"—that old standby of the lazy and self-satisfied, tried Mrs. Brown's patience, as it has that of many another. She persevered, however, and, turning to the Home Bureau, found her ammunition in the shape of bulletins listing the required materials, stories of what other communities had done, and recipes for simple nourishing dishes.

The cost of installing school lunches went largely for equipment and food material. Hired help was voted unnecessary, as the children could wait on themselves and assist also in preparing the food and washing up. The teacher assumed the supervision to insure cleanliness and proper cooking.

The equipment in the list, made up after careful study, included: 1 large kettle, to use on the stove which heated

the school measuring cup; paring knife; 1 saucepan or double boiler, 1 mixing spoon, 1 serving spoon, 2 dishpans, 6 towels, 1 egg beater, and 1 asbestos mat.

Pupils were to bring any extras they desired from home. Paper plates were also ordered, as an emergency supply. The cost of these supplies, it was estimated, should not exceed \$15. Donations of towels and a kettle brought the cost down, and a knife, fork, spoon, and cup apiece were ordered for each child, in-

"When a feller needs a friend"—or what not to pack in the lunch basket

stead of having them supplied from home, as was originally intended.

Part of the money—\$6—was given in small contributions, the rest and a small extra fund was raised by a basket party, at which the supper boxes prepared by women of the community were auctioned off to the men. Meanwhile the boys of the school built and covered with oilcloth two shelves for utensils. The girls made a protecting curtain for them.

Health of Children Better

Mrs. Brown and her committee are now eagerly awaiting the annual physical examination at which the school children will all be weighed. But the teacher tells them that they need not wait for the doctor's verdict, for she already sees the effect. "Eleven o'clock drowsiness" is a thing of the past, dull eyes are brighter, and even the girls and boys thought by their parents "perfectly healthy" have gained weight, look better, and are actually more alert and sturdy.

The hot dish at lunch pays in dividends of better, healthier children, and Mrs. Brown, for one, doesn't grudge the small amount of time and money which is building brain and brawn for husky little Johnnie.

RENEWING FURNITURE

MRS. GEORGE GRAY

The framework of old furniture has great possibilities, no matter how dilapidated and scarred the finish. Many garrets hold treasures which only require a little labor to make them a thing of beauty. In fact, the older the piece, the greater the possibility.

An old six-legged round table of ours had a most uninviting appearance. The color was a dingy brown, without grain or gloss, and it bore the scars of many years. After much consideration it was decided to remove the entire finish and reach the original wood. For this purpose a strong solution of gold dust was used. When all was removed, the table was thoroughly dried and given a coat of mahogany stain with varnish added. One of the prepared stains would have given the same results. It now occupies a prominent place in the living room and the owner prizes it highly.

Not everybody would have finished it this way. Tastes vary and one of the nice things about renewing furniture is the variety to be had. Rosewood or cherry would have made it a lighter color, while oak or walnut would have been other alternatives.

Many people do not care for the shine and gloss of varnish on the old pieces. A dull finish is procured by using wax instead. A little wax on a soft flannel cloth is rubbed on the furniture, doing only a small surface at a time, and using the wax sparingly. It is better to apply it often in small quantities. After about five minutes, rub it with a soft cloth until there is a rich dull luster.

Should the furniture need repairing, use the same kind of wood if possible. If that cannot be obtained, use something with the same grain, and stain

it to match. Dents and holes should be filled with beeswax which is softened until like putty. Sandpaper around and over it. The dust will work into the beeswax and give it a wood finish. Two coats of shellac render a surface just right for the application of wax. The shellac should be rubbed with an old gunny sack.

Furniture painted white is very popular now and many bedrooms are fitted with it. If this is done be sure that the paint does not contain oil as it is almost impossible to get it dry. Use inside flat white for two coats, then apply one of enamel white.

Old chairs carrying many coats of paint are most easily done over by using a ground color. When you have a good foundation covering (usually three coats), apply any desired stain. Walnut is a favorite with me. This finish is very durable.

There is a great satisfaction in doing this work and beholding the transformation. Often, old furniture sells for a song, but a little money and labor will make it well worth keeping.

RECIPES USING RAISINS

Oriental Marmalade

2 cups dried apricots
1 cup dried figs
1 cup dates
2 cups seedless raisins
4 cups cold water
1½ cups brown sugar
2 lemons

Cut apricots, figs, dates and raisins in pieces. Cover with cold water and soak over night. Add sugar and juice from lemons and cook slowly until thick—about 40 minutes. Pour into sterilized glasses and seal with paraffine.

Prune and Raisin Conserve

1 cup prunes
1 cup seedless raisins
2 cups cold water
1 cup brown sugar
1-3 cup vinegar
1 teaspoon cinnamon
½ teaspoon clove
½ teaspoon allspice
½ cup chopped blanched almonds

Soak prunes and raisins overnight in cold water. In the morning cook in the same water until prunes are tender. Discard pits from prunes and cut in pieces. Add sugar, vinegar and spices. Cook until thick—about 45 minutes. Add almonds and cook 5 minutes. Pour into sterilized glasses and seal with paraffine. This makes about 6 glasses.

Fried Mush With Raisins

½ teaspoon salt
2½ cups boiling water.
½ cup corn meal.
½ cup chopped seedless raisins

Add salt to boiling water. Add cereal slowly, stirring constantly, and allow to boil 10 minutes. Cook in a double boiler ¾ hour. Add raisins 15 minutes before it is done. Pour into greased loaf pan and set aside until cold and firm. Cut in slices. Dredge lightly with flour and brown in a small amount of hot melted fat in a frying pan. Serve plain or with syrup. This is delicious and young children will love it for a treat at lunch or supper.

WHOLE WHEAT HOT CAKES

Two cups whole wheat flour, 3 heaping teaspoons baking powder, 1¼ cups milk, ½ teaspoon salt, 1 teaspoon molasses, 1 tablespoon melted shortening, 2 eggs.

Sift together dry ingredients; add milk, molasses and shortening to beaten eggs and add to dry ingredients; mix well. Bake on hot slightly greased griddle, turning only once.

These are delicious eaten with maple syrup or honey.—MRS. H. M., N. Y.

Your patterns are the finest I ever used, and I have used many.—M. A. V. B., New Jersey.

Dessert Dishes For Parties

These Tempting Spring Patterns—A Hint for the Flower Lover

THE very idea of a party is to "have something different." Unusual dessert dishes are attractive and can be made with simple ingredients, the charm lying in the quaint form and appearance. A snow-covered cottage is a good instance of a dish for a child's party, for it is very appealing to the eye. The "cottage" is built up by means of slices of sponge-cake and the door can be made of something darker, say chocolate cake or ginger bread. Over all, to represent the snow, a little whipped cream is poured, while a little jam may be added to give color and flavor. Such a dish will give the youngsters an amazing amount of pleasure.

Fruit can be arranged to give it a marvelous importance and interest. Take two bananas and convert them into a pair of pigs by the simple means of adding broken matches for legs, paper tails and ears, and eyes painted with Chinese white upon the yellow rinds. You will be surprised with the delight which your handiwork will call forth.

Much May Be Done With Bananas

Bananas adapt themselves favorably to this kind of treatment. An Irishman riding his pig to market "to pay the rint" is funny. For the man, take a banana and slice off a small portion of one end, so that it will stand erect. Make arms of matches. A little piece of colored tissue paper makes the coat, to which may be added a scrap of ribbon for the scarf. And the old man's hat requires a word of special counsel. It can be formed from a small cork, gummed upon a circle or cardboard for the brim, the whole being duly blackened with charcoal.

An old Welsh woman with her cat is also funny. The woman's body can be made from a banana and draped with colored tissue paper. Make her hat of a filbert nut; the crown may be flattened in order to support the hat. Make her cat of two filbert nuts joined together and supported by pieces of matches. Bore holes through the shells of the nuts in order that the matches may go through. Paint eyes and mouth on them.

Other fruits beside the banana may be used to good advantage. Make a Red Indian out of a good-sized Turkey fig. His head may be a filbert nut with the outer husk intact; his arms may be pieces of almond, while the river upon which his canoe (or banana) sails is represented by some pale colored jelly.

An elephant is made by taking a pear for the body and a small apple for the head. Join these together with a little wooden skewer. He may be supported upon two pieces of banana, which act as legs; while his trunk is a piece of orange peel. His tail is of straw, his eyes are glass-headed pins, and his trappings and ears are of colored paper.

—JULIA W. WOLFE.

POPPIES ARE SHOWY ANNUALS

The poppy is very showy, with gay colors, yet it is not coarse. The velvety petals are thin as silk, and fall quickly, but new buds are constantly opening, so a bed will be a blaze of color throughout the long-blooming period. There are double and single varieties and several types.

A good mixture of types in double sorts will give a big range of flowers, for the doubles produce a percentage of single and semi-double flowers. The seeds should be sown very early in the spring, for they are hardy. The seedlings are very small and grow slowly at first, and if not sown early, weeds will choke them before they are large enough to work around well. The seeds are cheap and can be freely used, and if sown early you will have a nice lot of strong little plants. They will not bear transplanting. Thin to a foot apart for largest flowers, but a showy bed may be thicker. After the plants get a good start they grow fast and are fairly hardy, and after the first year the weed will self-sow and will generally be plentiful very early, but if you want good blooms you must fertilize and cultivate the soil well as soon as you can work among the plants.

The bright golden cups of the Cali-

fornia poppies are dazzling when grown in a mass. The fine-cut foliage is light green, with a bluish tinge, low and dense, and sets off the golden blooms that wave about on slender stems above it. They will continue to bloom during the summer if seeds are not left to ripen. For edging a flower bed, the yellow poppy is very popular, but it makes the best showing when planted in a bed or wide row, so the blooms can be seen as a sheet of gold.

—RAHAEL RAE.

RENOVATING PILLOWS

If pillows need renovating it is well to do it while the weather is cold enough to freeze the feathers, as that renders them light and fluffy.

Empty the feathers into bags made of thin white cloth and much larger than the pillows, so they can be shaken and squeezed in the warm suds. When they are clean, rinse thoroughly and hang on the line.

Frequent shaking and beating, as they near the drying point, helps to render them like new. If the ticks are good enough to use again, turn wrong side out and shake them thoroughly. When they are ironed, sprinkle wax on the wrong side and use a hot iron. This prevents the down and dust from working through. Insert one end of the sack into an opening in the tick and the feathers are easily replaced. If a cover tick is used, it is easily taken off and laundered without disturbing the feathers. This need not be of ticking. White cloth is very nice to use. Some people reverse this method and put the feathers in a thin bag before putting in the tick. Then either tick or feathers may be washed as needed.

If the feathers do not require washing, the pillows are much improved by sprinkling and laying on the snow in the spring sunshine.—MRS. GEORGE GRAY.

GET YOUR COPIES NOW!

"New Jer-Z Wet or Dry," "Somehow I Can't Forget," "I'm Longing for My Mammy." THREE BIG popular piano melodies, 50 cents.

TALLOID MUSIC SERVICE P. O. BOX 214 West Springfield, Mass.

THREE DRESSES WHICH PROVE THAT SPRING IS HERE

IS No. 1608 an apron or a dress? It has all the advantages of both, it would seem, for it covers one all over, is loose-fitting, and yet not the least bit "sloppy." An ideal garment for the busy housewife who wants to look presentable while she works.

No. 1608 comes in sizes 38, 40, 44 and 48—bust measure. Size 36 requires 3½ yards 36-inch material with ¾ yard contrasting. Price, 12c.

FOR the girl who is thinking anxiously about that graduation dress, No. 1633 solves the problem. Any high school girl could make it (or should be able to), yet it has a new, Frenchy look which sets it apart. Made in organdie, voile or taffeta it would grace any occasion.

No. 1633 cuts in sizes 16 years; 36, 38, 40, 42 and 44—bust measure. Size 36 requires 4½ yards 36-inch material, with lace or insertion to trim. Price, 12c.

NO. 1629 is the sort of dress you make in a day and then wear all year. Easy to slip on, it yet has a good deal of style. The new figured voiles (many of which show the Egyptian influence in color and design) lend themselves especially well to a style like this.

No. 1629 comes in sizes 34, 36, 38, 40, 42 and 44—bust measure. Size 36 requires 3½ yards 36-inch material, and ¾ yard contrasting. Price, 12c.

To Order: Write name, address and pattern numbers clearly, enclose stamps or coins to cover cost (wrap coins carefully) and send to Pattern Department, American Agriculturist, 461 Fourth Avenue.

Our pattern catalogue is decidedly a best seller. Have you your copy? Order while the supply lasts. It's a gold mine of suggestions. Price, 10 cents.

18 Ever-Blooming ROSE BUSHES

YOURS AS A GIFT For Only 2 Yearly Subscriptions for *American Agriculturist* at \$1.00 each. Your own renewal may be sent as one of the two subscriptions required.

No reader can afford to miss this mammoth gift offer—the greatest collection of plants we have ever given.

What can add more to the charm and beauty of your home than bowers of exquisite fragrant roses? Roses breathe sentiment and happiness. No home is complete without this remarkable collection of 5 pink, 4 white, 5 red and 4 yellow roses. One of them is a climber. These rose bushes are guaranteed to reach you in good condition in proper time for planting in your locality.

The entire lot of 18 rose-bushes will be sent you, postpaid, for only two yearly subscriptions at \$1.00 each. Address

Reviewing the Latest Eastern Markets and Prices

EGG SHIPMENTS INCREASING

H. H. JONES

AS prophesied on this page several weeks ago, the egg market held up remarkably during the month of March compared with last year. This was due to the extra demand for Easter and Jewish Passover holidays, which came earlier this year, and to the succession of cold waves and storms since January 1. Receipts began to increase considerably the third week in March, but total receipts at New York for the period of January 1 to date were still 33,000 cases below those in the same period last year. Stocks of Western eggs in transit were reported liberal.

The pre-Easter demand was chiefly for fancy graded stock, especially large-size white eggs. Express shipments from nearby sections have increased gradually, but qualities have not improved, many of best eggs apparently being culled for incubator use. The highest grades advanced and were sold promptly, but average and ordinary stock tended to accumulate.

Storing has started in the larger markets, but the amount stored so far has been insignificant. At New York, March 22, there were only 3,549 cases of eggs in cold storage, compared with 63,859 cases on the same date last year. The storage season will really begin after April 1, but the movement in the first half of April cannot be as heavy as last year. The chances are that the bottom price of eggs for this season will come after May 1.

Consumption continues to increase in spite of the way prices have held up, and the output through New York wholesale channels in the week ending March 17 was actually higher than in the corresponding week of 1922, and very much above the previous week. The big chain stores were advertising fresh eggs as low as 29c per dozen to the consumer last week, and very generally around 30 to 34c. These eggs were chiefly Pacific Coasts.

At this time last year extra fancy nearby hennerly whites sold at 35 to 37c, compared with 39 to 41c last week. Nearby hennerly browns, extra fancy, last year were 29½ to 30c, compared with 34c on March 22 this year.

CABBAGE NOW WEAKER

More liberal receipts of State Danish variety cabbage, heavy importations from Holland and increasing arrivals of Southern new cabbage caused a much weaker market last week, and the peak of prices for this season has undoubtedly been passed. Old cabbage is especially weaker, and State Danish sold on March 22 at \$35 to \$38 per ton. Opening up of country roads will probably cause still more liberal shipments and bring prices lower. New cabbage is now arriving from Texas, Louisiana, Florida, South Carolina and California.

POTATOES CONTINUE UPWARD

Because of bad roads and transportation difficulties, up-State potatoes in New York City markets worked higher last week. States in 150-lb. sacks sold from \$3 to \$3.50 for the best stock. Poor much lower. Demand good. Offerings were very light.

Bulk sold from \$1.80 to \$2 cwt., delivered in carlots; 150-lb. sacks quoted from \$3 to \$3.50 for prompt shipment. Maines offered at \$2.25 to \$2.35 cwt., bulk carlots, delivered. Long Islands sold as high as \$6 for 180 lbs. Demand exceeding supply.

Potatoes from Minnesota and Wisconsin are rolling to New York at prices ranging from \$2.25 per 150-lb. sack to \$3.15. Quality good. Some fancy Virginia second-crop barrels have arrived and first car Florida Spaulding Rose of the season came forward on Tuesday of this week. Best grades sold well at firm prices, with Virginia Red Bliss generally commanding \$6 and Floridas selling at \$12 per bbl. for No. 1s and \$8 for No. 2s.

ONION SUPPLIES LIBERAL

The usual active market for onions just before Easter and the Passover promises to be well supplied this year. Receipts were so liberal that prices were very irregular last week. On March 22 best Central and Western N. Y. yellows No. 1 sold at \$3.25 to \$3.50 per 100-lb. bag, with a few fancy

at \$3.75 to \$4, and ordinary at \$2.50 to \$3. Best red onions sold at \$2 to \$2.25.

At this time last year State Yellow No. 1 sold as high as \$11 to \$12 per 100-lb. bag and Red No. 1 at \$9 to \$10, with the market very strong.

MARKET DULL ON OLD CARROTS

Now that new-crop bunched carrots from the South are arriving more heavily, the trade is turning away from old carrots, and market for them is dull, except for fancy medium-sized bright muck stock. State old crop muck, unwashed, best sold at \$1.50 to \$1.60 on March 22, with a few fancy at \$1.65. Double-headed barrels, ordinary stock, sold all the way from \$1.75 to \$2.50.

BROILER DEMAND INCREASING

The demand for live fat fowls for the Jewish Passover holiday was very active and premiums were paid for the best stock. This special demand will be over on Friday, March 30. Old roosters were neglected prior to the Passover holiday, and there was very little demand for last year's chickens except those that were smooth-legged and fairly small in size. The demand

weight of 5,647,544 lbs. of foreign butter have been received at New York. Last week two boats arrived from Buenos Aires with total cargoes of 3,600 boxes of salted creamery butter, which had an apparent value of 47 to 48c per lb., duty paid. The Danish markets are offering best lots of butter for prompt shipment at a cost of 42½c at New York.

NEW BUTTER STANDARDS

An act recently passed by Congress and approved March 4, defines butter and provides a standard therefor under the Federal Food and Drugs Act, which includes the following definition: "Butter shall be understood to mean the food product usually known as butter, and which is made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring not less than 80 percent by weight of milk fat, all tolerances having been allowed for."

EXPORT BUYING HELPS CHEESE

Continued export buying of cheese has kept up the prices on well-made fresh stock. The Wisconsin market was

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on March 22:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.

Sheep, common to good ewes.....	3½ @5½	8 @9
Hogs, Yorkers.....	9¼ @9½	9½

for broilers is steadily increasing. Express shipments have been light. Because of increased demand, the market was firmer on March 22, with sales of colored spring broilers at 70 to 75c, and White Leghorns 58 to 67c.

Long Island spring ducks sold slowly last week, and it became necessary to reduce the price to 34c, which caused a considerably increased demand. In spite of the rescinding of the rule of the Board of Health restricting the sale of live rabbits, very few rabbits were received last week, and a strong demand for them was expected in the week before Easter.

BUTTER CONTINUES FIRM

The butter market was very firm all last week, and prices on March 22 were slightly higher than a week previous. Quotations on creamery at New York March 22 were 13c lb. higher on most grades than a year ago. The advance in price was in spite of the fact that receipts last week are about 5,000 tubs in excess of the previous week. The total receipts at New York from January 1 to March 22, 1923, were 663,457 tubs, compared with 614,602 tubs in the same period last year. The stocks of butter on hand in cold storage are very much below those of last year. Improvement in industrial conditions generally seems to have increased consumptive demand for butter. The feeling on the part of the wholesale trade is nervous, and the major part of the trade are trying to keep their supplies cleaned up each day as far as possible.

Since January 1, 16,955 casks of Danish butter, 11,050 boxes of Argentine, 55,389 of New Zealand, a total

firm last week. State, whole milk flats, fresh, average run, were quoted at New York March 22 at 25c lb. Held flats, average run, sold at 28 to 28½c.

Considerable cheese was in transit last week for Eastern seaboard points for shipments to British ports. Stocks of old cheese in the East are light. Cold storage holdings at New York March 22 were only 565,041 lbs., compared with 791,053 lbs. on that date last year.

DRESSED CALVES ADVANCE

Receipts of country dressed calves were lighter last week and the extra demand on account of the Easter trade caused the market to advance. More shipments were expected as a result of the higher price but quotations are likely to drop as soon as the Easter demand is supplied. Strictly fancy veals are in small proportion of the total receipts and the demand for them is greater than for any other grade of calves. Choice, dressed calves sold March 22, at 18 @ 19c per lb., prime, 17c, good, 15 @ 16c, medium, 13 @ 14c, small, 60 lbs., or common at 10 @ 12c.

There was a steadily increasing demand for dressed hothouse lambs and good trading was expected until after Easter. Fancy hothouse lambs sold at \$9 @ \$11, and poor, \$5 @ \$7 each on March 22.

TRANSPORTATION IN BAD SHAPE

Car shortage and congestion of railroad traffic promise to be more serious this spring than ever. It is quite likely that prices of farm products may be kept up at consuming centers due to inability to move the products from country to market. It is also likely that

farmers will be greatly handicapped in spring operation by delay of fertilizer, feeds and other necessities. In our judgment, it would pay every farmer to anticipate his needs for the next 10 weeks and order his supplies at once.

HAY SHIPMENTS STILL HEAVY

Receipts of hay at New York continued liberal last week and the market was irregular. Prices were so slow as to discourage further heavy shipments but there was still considerable hay in transit and supplies at the terminals were adequate to carry for some time. The pendulum of fluctuating prices may have swing low enough to cut off shipment, so that the man who ships at the time of least shipping will get his hay here when it swings back again. It is hard to advise anybody about shipping hay to this market as long as terminal facilities and methods of handling are such that prices go up and down with receipts of comparatively few cars. The absence of terminal storage facilities is the greatest drawback to orderly marketing.

Very little strictly No. 1 hay was received here last week, the bulk of the supply grading from No. 2 down with a large proportion of poor hay from State sections. Sales even on like qualities were at widely varying prices according to pressure to sell and place where hay was unloaded. Some very low prices were reported from track delivery stations and piers and the average sales were somewhat lower in Brooklyn than at Manhattan points.

LIGHT TRADING IN FEEDS

Trading in feeds was dull last week. Prices held fairly steady except for oil meal, but demand was weak. Quotations at Buffalo March 21, carlots Buffalo rate basis in 100 lb. sacks, per ton were as follows:

Gluten feed, \$46.55; cottonseed meal, 36 per cent, \$47; oil meal, 31 per cent, \$40; standard spring bran, \$34.50; hard winter bran, \$35.75; choice flour middlings, \$36.25; white hominy, \$32.05. No. 2 yellow corn per bushel, 85½c; No. 2 white oats, 53c.

CASH GRAINS AT NEW YORK

The following were cash grain prices at New York, March 23:

No. 2 red wheat, \$1.45@1.50; No. 2 hard winter, \$1.35½; No. 2 mixed durum, \$1.26; No. 2 yellow corn, 93½c; No. 2 mixed corn, 93c; No. 2 white oats, 56½c; rye, 94½c; barley, 81@82c; buckwheat, \$1.90@2.10. At Chicago: No. 2 yellow corn, 75@75½c; No. 2 white oats, 46¼@47c.

The farmer who ships rotten or imperfect vegetables has no right to be mean the commission agent at the other end of the line because he could not dispose of them profitably.

Dad's Secretary!

NO longer are business letters, purchase orders, and farm reports classed among the chores. Ever since Dad got the Underwood Portable, Mary has been taking a load of trouble off his shoulders.

Dad just "thinks out loud", and Mary's quick wits and nimble fingers do the rest. The Portable enables her to put words and figures on paper in a way that is rapid, clear, and businesslike. And she keeps on file a carbon copy of everything she writes.

Dad's reputation as a good business man has grown as a result of all his letters being typewritten. Business men instinctively respect others who are up-to-date and business-like in their methods.

No one needs to go to business college to learn to operate the Underwood Portable. The knack is easily acquired, with the aid of the instruction booklet that comes with every machine. Young folks who gain at home a knowledge of typewriting have a valuable asset whatever their life work may be.

UNDERWOOD TYPEWRITER CO., INC., Underwood Building, New York City.

The Fight in the Pasture Lot

On the Devil's Paint Brush and Other Devils Which Make Waste Land

By WILLIAM I. ROE

"SAY Jim, what in the world do you think you are doing tramping around with a pail out in that pasture?" called a man driving along the St. Lawrence River Road to a neighbor. "Come on over and see for yourself, Roy. This isn't the first spring that I have done this and right over beyond there you can see what has happened," returned Jim.

The man in the pasture—James Peo of Cape Vincent—kept on with his work and when his neighbor reached him he was just emptying out the last of the contents of his pail. "What have you got there" asked Roy. "Just plain 16 per cent acid phosphate" replied Jim, "and that is what I put on that strip over yonder last spring, while up by that rock is where I put on some, two years ago. Come over and I'll show you."

Seeing is Believing

"You see all that devil's paint brush between here and the road—well just look down that rock line and you can see the grass." "Yes Jim, the devil's paint brush seems to be all gone" replied Roy. "Well Roy, the paint brush was thick as hair on a dog all over when I put on the first acid rock back in 1919. I'll admit that I was a bit skeptical for it didn't seem possible that one could get rid of the pesky stuff as easy as that, but the county agent said that it should work, so we tried it. The white clover and blue grass look pretty don't they? It all came in itself too, for we didn't put any grass seed on that place."

Jim Peo is one of the pioneers in pasture improvement in the North Country and in New York State for that matter, for up to that time only a few had done anything towards keeping up the productivity of their pasture land that could not be plowed, aside from putting on an occasional load of manure.

There are two kinds of pasture land in the State—that which can be broken up and reseeded when its production runs down, and the remainder which is too steep, or too stony, or too rough to permit plowing. The latter has had the greatest influence on the dairy industry, for where pioneers found land that was not fitted for cropping they turned to the dairy cow as the means of harvesting the crops of grass that would grow unaided among the stumps. This "cheap" pasture has been a big factor in the production of our dairy products.

A Big Problem

With probably considerably in excess of 2,000,000 acres of this kind of pasture in New York State, the cost of milk production for many dairymen hinges, to a large extent, on the amount of grass that these acres will produce during the pasturing months. At the present time it is no secret that six weeks is the limit of good pasturage on much of the area, as

far as the heavy producer of the lacteal fluid is concerned. After that she must be fed from other sources in order to keep her going strong. All of which has a distinct influence on the number of golden shekels the dairy farmer can hope to keep in his jeans at the close of the year.

In countries older than ours the condition of pastures has been a pressing problem for many years. In agricultural writings of over one hundred years ago, we find that

To the right of the stake, pasture top dressed with lime and acid phosphate, note how better growth hides the stones. This is not always the needed application, it may be that a light broadcasting of nitrate of soda or a light application of barnyard manure is all that is necessary. Trial strips tells the tale

English farmers were concerned with improvement methods. Harrowing was the main standby at that time.

A few years ago the advisory committees of some of the dairy-county farm bureaus called attention to the fact that devil's paint brush and other weeds were rapidly taking the place of blue grass and clover in many sections. They urged the need of studies and trials in order to be ready when the mass of farmers needed information as to what steps to pursue to bring the grass back. It was pointed out that financial conditions would require that any methods must be: relatively cheap, efficient, and easy to carry out.

The State College Found Ready

Accordingly county agents got busy. Letters of inquiry to experiment stations all over the United States showed that little attention had been given to this important problem, and that New York State stations were far in the lead. The extension staff at Cornell had carried on sufficient work so they were ready to make suggestions. Farm-

ers were found who had—accidentally or otherwise—tried various combinations on pastures, and had results to show. It was learned that the use of stable manure would drive the intruders out, but most men need all the manure on their work land.

Checking of the trials that had been made, showed that the same methods would not work under all conditions. Up in Jefferson and St. Lawrence counties plain 16 per cent acid phosphate was found doing wonderful and almost unbelievable work. In the southern tier counties, lime was the material that was doing the trick. In other sections a combination of these two materials chased the devil's paint brush and coaxed back the timid white clover and blue grass.

Several Combinations Tried

As a result of all these findings, a number of farmers among whom was our friend Jim Peo, started out to discover which particular treatment would prove best for their soil and local conditions. A strip of pasture liberally besprinkled with paint brush was given an application of ground limestone at the rate of one ton to the acre. An adjoining strip received 300 pounds of 16 per cent acid phosphate (acid rock) to the acre. Next to that, 300 pounds of the acid phosphate and one ton of ground limestone were scattered separately over an acre. In many places a load of manure would be spread in another place. Sometimes the ground was gone over with a harrow either before or after or both, other times an application of a grass seed mixture was made, and occasionally every combination that could be worked out was tried.

Did everyone achieve the mystic result of a luxuriant pasture with a velvety sod of blue grass, white clover, and other good pasture plants? Well—hardly. There were failures, some practically complete and from that all stages up to what might be termed perfection. Many times there were more lessons to be learned from the failures than from the successes. In the North Country alone, there are upwards of 150 farmers who have trials of this kind, which have been put on during the past four years, and other dairy counties have a goodly number.

With all these trials to judge from, it is now possible for the farmer, who is anxious

to keep a few more pennies from the milk check that from time immemorial has had the fade-away trick down pat, to figure out just what steps he will pursue. In order to save some of the time he would have to spend visiting, we will proceed to summarize some of the outstanding features.

Selling Fertility

The first thing that most people fail to consider is, that when a pound of milk is sold, some of the farm's fertility is sold with it. 10,000 pounds of milk will remove the equivalent of one acre of land. (Continued on page 313)

The East is a dairy country because it is a pasture country, and for that reason pasture improvement means improvement of the dairy business

Choosing and Buying a Farm

"Married in Haste, Repenting at Leisure" Applies in Purchasing a Farm

IN buying a farm the first thing which a man must do is to select the region in which he wishes to farm. Different sections of a State or county are adapted for different types of farming. As a result of many generations of experience, farmers in each region have decided upon a certain type of farming which seems to be best adapted to their conditions. The man who expects to farm in such a region should ordinarily be willing to carry on the same general type of farming that his neighbors are engaged in. The man who wishes to carry on a particular type of farming should select a farm in a region where that type is carried on.

Community Interests an Asset

There are occasional instances where individual farmers do very well by farming in a way which most of their neighbors do not do. For instance, one dairyman in a fruit region or one grower of small fruits in a dairy region may do very well on account of good local markets and little competition, even though he is carrying on the type of farming for which the region is not best adapted.

In general, however, the man whose neighbors are engaged in the same type of farming with himself finds that he has many advantages. There is a community of interest, a large collection of individual experiences in the community and the judgments of many other men to draw upon. Labor in this community is skilled in doing the work connected with the several enterprises of the community. It is easier to sell products in a community where those products are raised in large quantities. It is easier to buy fertilizer, spray materials, machinery and other things needed on your type of farm if most of your neighbors are carrying on the same type of farming.

Selecting the Farm

In selecting a region we should pay special attention to the soil, topography, the markets, the means of transportation and the climate. Soil, markets and climate probably do more to determine the type of farming than any other three factors. In selecting a region for a certain type of farming it is well to consider also the regions which compete with this section and what advantages and disadvantages each competing section has.

In looking over a farm, one of the first factors to

By C. E. LADD

consider is the size of the farm and the possibility of carrying on a business of profitable size. A very small farm is incapable of returning a large profit unless devoted entirely to intensive crops. A very large farm contains a considerable risk and requires con-

Trying to haul milk, hay or potatoes to market over bottomless dirt roads emphasizes the value of an improved road to any farm property

siderable executive ability to make it profitable. All farm management studies indicate that the family-sized farm is much more profitable than the smaller farm or the very large farm. This family-sized farm may be a farm of from 150 to 300 acres in general and dairy farming, and somewhat smaller than this in fruit growing, poultry or vegetable growing. Sometimes it is advisable to purchase a small farm because there is a possibility of renting or purchasing adjoining land some time in the near future. If

anyone is considering the possibility of reselling a farm it is well to bear in mind that small farms sell more readily than large farms.

The size of farm is not always indicated by the number of acres. Other measures are number of crop acres, number of cows which the farm is carrying, the number of cows which the farm can carry, acres of bearing fruit, number of hens kept, etc.

Select a Farm with Good Field Layout

Large, well shaped, level fields which are near the buildings can be worked much more economically than small or crooked or rough fields or those that are far distant from the buildings. With the invention and adoption of each new piece of farm machinery these factors become more important. Sometimes a farm has a very poor field arrangement which can easily be changed. In other cases a poor field arrangement is so determined by stone walls, gulleys, swamps, creeks and other obstructions which are immovable or expensive to move that a rearrangement is absolutely impossible.

If all the manure must be hauled up hill or if all of the farm products must be hauled up hill to the barn, it requires expensive labor. If some of the tillable fields are so far distant that it requires several minutes of travel by man and team before field work is started, then these fields are very expensive to work. If pasture is far distant from the barns, the result is a waste of labor and often a loss of milk flow.

A compact, economical farm layout with large well-shaped, level fields and pasture located within a reasonable distance of the buildings makes a farm worth a great deal more than one with a poor uneconomical layout.

The Factor of Good Buildings

With our present wage scales and the present prices of building materials, building work is very expensive. Most eastern farms are so priced to-day that if the owner were to obtain bare land at a reasonable price, construct a very economical house and a very economical barn, yet he could not sell the land and buildings for anywhere near enough to pay for the total cost. Many eastern farms have excellent buildings. If the buildings must be rearranged, the cost of doing this must be added to the cost of the original

In buying a farm do not lose sight of the fact that you are also buying a home.

Milo D. Campbell

IN the passing of Milo D. Campbell, whose death we announced last week, farm people have sustained an irreparable loss.

The success or failure of all cooperative work among farmers depends to a very great extent upon their leaders. What farmers need to-day are leaders from their own number who are men with vision and ability who can stand steadfast against the discouragement which comes from the indifference and criticism of their supporters, and men who cannot be influenced by jealousy, ambition or other selfish motives. Such men are few indeed, but Mr. Campbell measured high on all of these qualifications.

For years Mr. Campbell was president of the National Milk Producers' Federation, and much of the national legislation passed recently for the benefit of dairymen stands as a monument to his skilled and persistent work for it.

A farmer himself, Mr. Campbell understood farmers, and no man in America could express more forcefully or more clearly problems which farmers must meet. None of the thousands of men in the East, as well as throughout America, who were privileged to hear him will forget his speeches which alternated bubbling humor with earnest appeals for farm people to stand as a rock in cooperation to improve farm conditions, but to always keep the needs of the nation above those of any class.

E. R. Zimmer

IT is with great sorrow that we announce the death of our friend, E. R. Zimmer, who died at his home in Syracuse on March 22 of pneumonia.

Mr. Zimmer was, since its organization, the secretary of the New York Holstein Friesian Association, and to his efforts more than to those of any other person, must be credited the progress and success that have been made by the Holstein men through their State association.

Before accepting this position, Mr. Zimmer was manager of the Farm Bureau in Tioga County, New York, where he was

known and loved by practically every farmer in the county, and where he worked hard to bring prosperity to the farm people that he served.

Mr. Zimmer was another leader whom farmers could ill afford to lose. His death is especially sad because he was a young man with every indication of long years of effective service ahead of him. His was a quiet, gentle personality, but always strong and steadfast for those principles which he thought right. The many thousands of farm people living from one end of the State to the other who were privileged to know Mr. Zimmer will mourn with us in the loss of a farm leader of ability and integrity, and in the loss of a loyal and worth while friend.

Will Cooperation Destroy Individualism?

AMERICAN individualism has had much to do with the rapid development of our nation's civilization. The necessity of working alone and solving one's own problems without outside help, whether on the farm or in the small manufactories of early times, taught men to think and to develop great power for individual initiative and action.

It is said that the chief reason why Americans are probably the best soldiers in the world is their power to conform to general discipline, but at the same time use their heads in individual thought and action at the proper time. It has always been hard to throw an American army into a rout, because there was not only the morale of the division or regiment to overcome, but also the morale of every man who insisted on staying and settling the argument individually.

The development of the great manufactories founded upon the division of labor, where workmen in the factories do only one kind of work, and the coming of the labor unions have without question lessened the city laborer's power and opportunity for individual thought and action. It is an interesting question, what effect cooperation among the farmers will have in interfering with individualism.

Herbert Hoover, in a recent interesting little book called "American Individualism," raises the thought of whether or not our enthusiasm for organization is to mean "a new sort of tyranny destroying the foundation of individualism."

We agree with Professor Carver, the great economist, when he says, "I think we should not be too hasty in applying the cooperative principle to the production end of farming. Obviously, you can't roll a steel rail in a blacksmith's shop; a large mill is needed. But there are kinds of work that can be done better on a small scale, and this appears to apply to farming, despite all the talk we hear about syndicating the business. I don't think you can beat the one family farm."

On the other hand, all of us have come to realize that cooperation is absolutely necessary on the sales end. But the proper kind of cooperation, even in the sales of farm products, will aid and strengthen individual effort if there is mutual confidence in and between officers and rank and file, if there are no secret closed sessions of a select few, if the management listens carefully to all the suggestions from the membership and if the membership attends meetings and takes an active part in the affairs of the organization.

A particularly good example of the recognition of the individual member by a cooperative organization is the plan now being carried out by the Western New York Fruit Growers' Packing Association. Through its board of representatives and its executive committee, it has elected by informal ballot eight special committees with a total membership of approximately twenty-five men. These men have been carefully chosen, not

only for their constructive leadership and suggestions, but so as to represent nearly all of the local units and the special problems of the organization.

These committees include four commodity committees which are to deal particularly with the special fruit commodity problems. They also include committees on production, finances, organization, and purchase of supplies. Most of the committees have already met, and the best thought of some of the best fruit growers in Western New York is being earnestly given to the solution of many vexing problems. Not only will this result in the nearest approach to the solution of these problems as is possible at the present time, but what is more important it is certain to strengthen the confidence of the individual member in his organization and in its management and will build up a real cooperative spirit and develop an individualism alive to public service as well as to its own opportunities.

Shall I Invest In Land?

IN 1910, the population of the United States was, in round numbers, 92,000,000 people. In 1920, it was 105,000,000 and it is now estimated to be better than 110,000,000. In other words, we have had an increase in our population in thirteen years of nearly 19,000,000 people. The Census of 1920 showed that from 1910 to 1920 rural population, including small villages, increased 3.2 per cent, while the city population increased 28.8 per cent. If we are to judge by history of other countries, there is every reason to believe that the people will continue to increase in number and that the city will grow faster than the country. While this great body of consumers has been increasing so rapidly, the cheap, abundant, fertile lands, the great food reservoirs of the country have been decreasing, and there are no more that can be developed except at high cost per acre.

There is but one conclusion to all of these facts, and that is, the demand for agricultural products must steadily increase. This is a valuable fact to keep in mind to add to the points made by Dr. Ladd in the feature article in this issue on buying a farm. If the farmers of America, of the present and future, are intelligent enough to make sure, through organization or other good marketing methods, of obtaining their just share of the consumer's dollar, then the future of farming must be better than it has ever been in the past.

We believe that this is a good time to invest in land, providing that investment is carefully made at conservative values, and providing also that it is made, not with the hope of large immediate returns, but rather with the assurance that the large increasing demand for agricultural products will insure the farmer of the future who uses intelligent production and marketing methods as adequate return for labor and capital wisely invested.

Look Out for San Jose Scale

ON the next page we have taken great care to work out some seasonable directions for treating seed and for spraying orchards. We call your especial attention to this page and suggest that you preserve it carefully for reference at future times when you may need it.

In connection with spraying, may we suggest to apple growers that the San Jose scale is again spreading very rapidly and that special attention should be given this year to spraying for its control. At one time the San Jose scale threatened the entire apple industry of the East, but the persistent use of lime-sulphur or scalecide overcame the menace until the spraying was discontinued. Now the scale is gaining ground again.

Seed Treatment and Spray Schedules

Directions for Controlling Diseases That Cost Farmers Millions—Save This Page

THE problem of fighting crop enemies such as insects and diseases, has become as important in our agricultural practices to-day as fertilization, rotation and other farm practices. It is a fact that to-day we have more plant diseases and noxious insects to contend with than years ago. They have been imported one way or another from foreign lands. Whether or not this could have been avoided and who was to blame, does not help. The fact is, we have the diseases and the insects and they must be combatted.

The fruit man knows full well that if he attempts to market wormy apples he is up against a stone wall when he has to compete with men who are selling clean fruit. The man who has scabby potatoes finds that his produce goes begging when he places it in competition with clean stock.

The fight is not only against the insect and the disease. The elements must be taken into consideration. Some years the weather is directly responsible for the more rapid development of plant diseases, consequently greater activity is required on the part of the farmer to keep the spray rigs going and to keep the plants covered with a film of poisonous material. To completely cover the entire spray schedule of every crop would take many, many pages. However, American Agriculturist is devoting this entire page to a few fundamental crops that suffer severe annual losses due to diseases that are easily controlled. It is suggested that readers of the American Agriculturist remove this page from the copy and tack it up in some place where it will be available for use as a source of information.

Treating Oats For Smut

THE smut of oats has probably been responsible for greater losses in crop production than any other preventable crop disease. This is due no doubt to the fact that smut is rather inconspicuous at harvest time and does not injure the quality of the threshed grain. Due to this growers often declare that they have no smut in their oats when, as a matter of fact, they may be losing from 5 to 25 per cent of their crop. This neglect coupled with the enormous production of oats in this country is estimated to total up an annual loss of 50,000,000 bushels.

Seed treatment of oats for smut is easy and effective. There are several methods, but the easiest, most convenient, and still effective method is to sprinkle the oats with a solution made by adding one quart of formaldehyde to 40 gallons of water. Before treating the seed, it is run through a fanning mill and subjected to a strong draft which will remove smut balls and light grain. The cleaned seed is spread on a perfectly clean floor, which has preferably been sprinkled with the formaldehyde solution previously, using a common sprinkling can.

The grain is then turned over and over by shovelling until every kernel is well moistened. The oats are finally shovelled

By FRED. W. OHM

into a conical pile and covered with blankets or canvasses that have been moistened with the solution. It is allowed to remain thus for several hours or over night. After it has remained in this state for the specified period, it can be sown by hand immediately or dried in order that the grain will run through the drill more readily. Obviously the rate of seeding in the drill should be

erally known, although it is just as prevalent. This latter disease may be identified during the growing season by dwarf plants that show a weakened and stunted growth. Later in the season and at digging time, it may be identified by a large number of small tubers just near the surface of the soil.

This disease attacks the plant at the surface of the soil, rotting away the stem. In its attempt to grow and reproduce, the plant throws out branches from buds just below the surface of the soil, known as adventitious buds, which develop into new stalks and break through the soil. These are also attacked by the diseases and other branches start from this second sprout. In the meantime in its attempt to reproduce, the weakened plants throw out small tubers that adhere closely to the stem.

The treatment to control scab is not necessarily the same as for rhizoctonia. If a grower knows his seed is not infected in any way with the rhizoctonia, he need only treat with formalin. In this treatment, formalin is used at the strength of one pint of 40 per cent formaldehyde to 30 gallons of water. The seed is immersed two hours in the solution. The formalin is nonpoisonous and can be used in metal as well as wooden containers. The same solution may be used for five or six different batches without losing much of its strength. However, rhizoctonia does not yield to the gas of formaldehyde so readily and therefore must be treated with a more severe remedy, which in this case is corrosive sublimate. In view of the fact that corrosive sublimate will also kill scab, it is not necessary to use both materials. It is a case of killing two birds with one stone.

Corrosive sublimate (mercuric bichloride) is a deadly poison and must be handled accordingly. It comes in tablet form and must be kept where children or persons who are ignorant of its effect, will be unable to confuse it with ordinary pills. Furthermore, corrosive sublimate reacts with or corrodes metals and for that reason only wooden or earthenware containers should be used. In mixing the solution, 4 ounces of corrosive sublimate are dissolved in 30 gallons of water.

Due to the fact that the solution loses its strength rapidly, in contrast to formalin, it is only good for three different batches of potatoes. The first batch is immersed for a period of approximately one hour and twenty minutes; a second for a hour and a half; and the third for a hour and three-quarters.

When the solution is no longer needed, it should be disposed of in such a manner that farm stock will have no access to it. After the seed has been treated, it is spread out on the floor to dry and is then ready to be cut previous to planting. To simplify matters in treating seed potatoes, it pays to have five or six water-tight barrels on hand, each one having a bung or spigot in the side, near the bottom. All are placed on a platform as high as a pail to draw off the used chemical. All the barrels are filled with potatoes to be treated, except one, which is used as a reserve when changing potatoes in the barrels.

Period for Spraying	Materials in Spray Mixtures	Insects and Diseases Affected
Delayed Dormant  When buds show green at tips	Lime-sulphur (1-8, winter strength) To each 100 gallons add: Lead arsenate 4 to 6 lbs. Nicotine sulphate, 3/4 pint	San Jose Scale Blister-mite Bud moth Leaf rollers Casebearers Aphids
Blossom-Pink  When blossoms show pink	Lime-sulphur (1-40, summer strength) To each 100 gallons add: Lead arsenate 4 to 6 lbs. Nicotine sulphate, 1 pint	Scab Green fruit worms Bud moth Leaf rollers Casebearers Dark apple red bug
Calyx  When last of petals are falling	Lime-sulphur (1-40, summer strength) To each 100 gallons add: Lead arsenate 4 to 6 lbs. Nicotine sulphate, 1 pint	Scab Codling moth Green fruit worms Bud moth Curculios Lesser apple worm Dark and bright apple red bugs
Later sprays to be determined by weather conditions. Two sprayings often made are (1) two to four weeks after calyx spray, and (2) about the 1st of August, when the second brood of codling moth appears	Lime-sulphur (1-40, summer strength) To each 100 gallons add: Lead arsenate 4 to 6 lbs.	Scab Codling moth Curculios Lesser apple worm Apple maggot

Schedule for Spraying Apple

N. Y. Expt. Sta. Cir. 57

somewhat increased to allow for the swelling of the seed.

If the treated seed is not used immediately, it must be born in mind that the grain should not be stored in bins or sacks unless such storage places have also been treated with the formalin. In purchasing formalin it is well to make certain that the material purchased is 40 per cent strength, which means that it contains 40 per cent of formaldehyde gas by volume. This material can be procured at the local drug store. It is interesting to note that several commercial seed firms are putting treated seed on the market.

Seed Potato Diseases

OF all the diseases of potatoes, scab and rhizoctonia are most prevalent and take enormous tolls in our annual yields. Scab is so common that a description of this disease is needless. Rhizoctonia is not so gen-

Planter Profits

AFTER you have spent weeks behind the plow, the disk, and the harrow—after your fields have been worked down to a perfect seed bed—then comes the time to make planter profits. Big yields are largely the result of perfect planting—every hill in its place and every hill a full hill. Year after year the profits of good planting follow

International and C B & Q Corn Planters

They plant accurately and evenly whether set for checking, drilling or power drop. Without stopping the team the variable clutch can be set to plant 2, 3, or 4 kernels to the hill. Edge, flat, and full hill plates interchange in the same hopper. The automatic markers require no attention. Valve mechanism is so carefully fitted and so accurately timed that missing and stringing are entirely eliminated.

The tongue adjustment for leveling the boots insures an even cross check. Fertilizer attachments always available.

This year, pocket the profits of good planting by using an International or C B & Q Corn Planter.

As I View Long Island

Where Farmers Do Things Differently

IT was a good many years ago—so long ago that the incidents and impressions are becoming pretty indistinct in my memory—that I first went out on Long Island for Farm Institute work, and, from time to time during the intervening years, I have had the opportunity to see and study the agriculture of this entirely unique section of our State, and just in early March I went again. Now, I do not want to slander the Island. I have been over it from end to end, and from side to side, by train and automobile, but it seems to me that about half of it is scrub oak and

J. VAN WAGENEN, JR.

scrub pine, of which every acre looks exactly like every other acre. It is strange, it seems almost unbelievable, that within 30 miles of the giant city and in a region which has been settled almost from the earliest years of this country, deer still run wild. Probably Suffolk County has more continuous area of woodland than any section of our State outside of the Adirondacks.

Made by a Glacier

THE geologists say that the island represents about the most southerly advance of the ice sheet during the glacial epoch. The backbone of the island is really a terminal moraine—a deposit of sand and gravel ground up by the ice and reworked by wave-action in the Atlantic. Much of this gravel is so coarse and has so little available fertility and such slight water-holding capacity that it is almost valueless for agricultural purposes. Parts of the region are made up of gravel so coarse and open that the rain sinks down through it instead of running off, and hence there are no permanent streams. Much of the island carries a low, scrubby forest growth, mostly oak and pine. In it there are clearings

with clusters of shabby little houses where a class of strange and hardy denizens make their homes.

The most distinctive and profitable use of these pine-barren areas is to "put them out for sucker-bait." It seems to be a highly developed form of obtaining money under false pretense, and yet, upon the whole, it is within the law. In brief, the procedure is to acquire a tract of land—where it is or what it is good for doesn't matter—proceed to organize a development project, cut some "avenues" through the pine brush, in some cases even going so far as to lay a little shoddy concrete sidewalk, and then proceed to sell building lots to any sucker that can be induced to bite. There may be a forlorn shack or two somewhere within sight.

Where Land Sharks Thrive

IN the city office of the project these wildernesses will be represented by beautiful maps with romantically named avenues and glowing literature setting forth the advantages of every man owning his own villa and sitting under his own vine and fig tree while his brow is fanned by the pine-scented and health-bringing breezes of the island

land. The buyers are suckers indeed. Sometimes the promoters run free excursions with free entertainment thrown in as a special inducement to decoy the suckers in large numbers. The whole business is either funny or pathetic, according to how you look at it. Of course, it is only the initial payment that they are interested in.

I am told that a very large part of the county court business in Suffolk County is the sale of these holdings for back taxes, and in many cases it is impossible to obtain any offer for the property. It is an interesting commentary upon the helplessness of some city men when they come to deal with rural things, and it is also a question if our laws ought not to give some sort of protection for these babes in the woods who are simply the prey of unscrupulous sharpers.

Changes Taking Place Rapidly

OF course, in a region lying close to a great city like New York, where real estate is very active, sweeping changes are taking place. There are parts of the island where land values, even in big acreage, are very high. This is true of the fashionable locations such as the Wheatly Hills, the water front on the South Shore and the Shinnecock Hills.

Many of us will remember in our old school history the statement that Manhattan Island was once purchased for the equivalent of \$24.00. Well, I was told that a big part of the Shinnecock Hills was once bartered for a yoke of steers. I might add that from a strictly agricultural standpoint, the man who swapped away the steers got "stuck." Now it is said that a syndicate has

taken over a part of them for six hundred thousand dollars. Somehow—I cannot tell why—these low, rounded hills are totally different from the rest of the island, and have a strange, restful beauty all their own. I don't wonder that rich men like to crown them with wonderful homes.

There is one natural feature of the island so unusual that it constitutes one of the riddles of geology. Some 20 miles east of Brooklyn and covering an area some five or six miles square is an almost perfectly level region known as

Hempstead Plains. The interesting feature is that it is entirely treeless and covered with a tough sod. A condition like this is so unusual outside of the Mississippi Valley that it has been accounted for in various ways. One theory was that the land had been cleared, possibly by Indians or by white men, so long ago that the very memory of it has been forgotten.

Still a Problem

MEN who have studied the Plains in the light of geology and botany are agreed that this is an area that "was captured by the grasses at the close of the glacial epoch, and they have held it so tenaciously that tree growth has never been able to establish itself." Of course, this is nothing more than occurred on hundreds of thousands of square miles in the prairie states, but then one does not expect natural prairie on the Atlantic Coast. The Plains have a surface soil that is dark in color and looks fertile, but they tell me it is not. The subsoil is coarse, open gravel, and their agricultural value is low.

Now, I do not wish to convey the idea that Long Island is only a strip of sand and gravel and scrub woodland.

BINDER T... CAR LOTS, Per Lb. 9c

Small lots a shade higher. Agents wanted. BURT & SONS, MELROSE, OHIO

This characterization would be true of the center of the island. There is some good land around the western end, but more and more it is being converted into building lots or taken over for great country estates. I remember when Hicksville was the center of a tremendous "cuke," or pickle industry. No one ever speaks of "cucumbers" where they grow them, but always "cukes." Now, various causes—perhaps most of all the cucumber blight—has largely extinguished the business. Expressed in square miles of cultivated land on the "East End" is not so very important, but expressed in terms of production and values per acre, it is most impressive.

The North Shore grows a great variety of crops—some of them very special ones. The outstanding products are potatoes, cauliflower, cabbage and cabbage seed, Brussels sprouts and lima beans. In growing cabbage seed, the mature heads are pulled in the fall, thrown into windrows in the field and covered with earth enough to prevent hard freezing, and then reset in the spring. Further east, on the northern fork of the island, is Point Orient, with much celery and onions, and a large development of overhead irrigation. On the North Shore dairying is well nigh unknown.

A Thought for the Dairyman

AT Grange dinners it has amused me to see these very prosperous people taking the color out of coffee with the contents of tin cans of condensed milk. Luce's Favorite, the corn which has become so very popular as a variety for up-State ensilage, was originally confined to this locality.

The South Shore, especially "The Hamptons," have a much less diversified agriculture. Indeed, it is mainly made up of potatoes and then more potatoes. Only the other day a man confessed to me that they did grow some patches of corn and hay, but added that they generally managed "to keep them back out of sight." Everywhere on the island men are using quantities of commercial fertilizer, which seems unbelievable to us dairymen. It is not a wonder-tale, it is the simple truth, that for potatoes on the South Shore the usual dose of fertilizer is from one to one and one-quarter tons per acre, and this amount is of high-analysis "complete" brands. It is true everywhere that the men who have learned to use the most fertilizer use the highest priced formulas. The South Shore has a good many foggy mornings, and high humidity, which favors the blight fungus and insuring the potato crop, means spraying with a thoroughness and frequency which up-State growers can hardly understand. The island depends almost wholly upon seed from Maine, Northern New York and Vermont. One large grower told me that the community experience with Vermont seed had been especially fortunate. While purchased seed has been the almost universal rule, the fact that this year there is plenty of native stock at rather low prices, while the imported seed is relatively high, will lead to a considerable use of the home-grown seed.

Potatoes go in Early

POTATOES on the South Shore are planted at the earliest possible date—not in an effort to catch the early market, for the business as a whole is a main-crop proposition, but because experience has shown that early planting gives best results. Two years ago many potatoes were in on St. Patrick's Day, but mid-March planting does not happen this year. On the evening of March 7 we had to both shovel and push to get two miles with an automobile, but I ought to add that a condition such as this is almost without precedent. The South Shore has the warmest—I will not say the best—climate in the State. According to the data of the Weather Bureau, the average date of the last spring frost is April 20, and the first frost in the fall is October, or more than 200 days between frosts, as compared with only 120 days on the high lands of Central New York and only 90 days in the Adirondack sections of the State. It must be nice to live where you don't have to worry about the corn frosting before it is fit for the silo. A climate like this makes possible a considerable list of crops that have no real place

(Continued on page 317)

FROM A KODAK NEGATIVE

KODAK

Story-telling pictures like the one above, picture records of your crops, buildings and equipment, selling pictures of your cattle, chickens or hogs—they all represent the call for an Autographic Kodak on your place.

No. 3A Kodak Junior is an ideal model for the farm. The prints are clear and large, $3\frac{1}{4} \times 5\frac{1}{2}$ inches, and the camera is a splendid example of the Kodak way to good pictures—simple, sure, inexpensive. Price, with single lens, \$17.50.

Other Autographic Kodaks \$6.50 up.

Eastman Kodak Company, Rochester, N. Y.

Long-Time Farm Loans

This Bank has loaned to the farmers in New England, New York and New Jersey over \$25,000,000 and has returned to them over \$137,000 in dividends.

If you operate your own farm or intend to purchase a farm, we are prepared to make a long-time, easy-payment loan. Interest at 5½%. Payments semi-annually. Loans run for 33 years but can be paid at borrowers' option any time after 5 years. Local representative in every district.

Growing Heavier Oats

This Farmer Did It With Little Extra Effort

IN sections where winters are long farmers prefer crops which require cultivation, as corn and potatoes, to be followed by oats, grass to be seeded in the oats as a catch crop, rather than follow oats with wheat. Some farmers succeed quite well by omitting wheat from the rotation even where winters are not severe. But I am not ready to admit that it is the better plan in order to secure a good stand of grass and clover. We do not consider oats a desirable companion crop for young grass. Wheat, rye or barley make for better nurse crops. I will concede that in sections where seasons are short and winters long and severe, farmers are quite wise to adopt a shorter rotation better adapted to their climatic conditions.

The old reliable rotation of corn, oats, wheat, clover and timothy, is a good one where the farmer desires to make oats a part of the rotation. The clover and timothy are seeded in the wheat. Rye may be substituted for the wheat. In this plan, the preparation of the soil is so managed, when seeded to oats, as to make for best results when seeded to wheat following the removal of the oats crop. This calls for the plowing of oats ground at times when it is not too wet or early enough, so it will yet freeze out thoroughly.

Oats ground plowed too wet will not bring good oats, and will cause fall preparation for wheat to result in cloddy soil. Beware of plowing too wet. You will wish you had not done it, regardless of the crop grown.

Acid Phosphate the Preferred Fertilizer

SOME few farmers here use a complete fertilizer. Others use only a phosphorus carrier which is most easily obtained in 16 per cent acid phosphate. Personally, we favor the acid phosphate where soil is good to really fertile. It insures a better yield of grain and less tendency to soft straw that will go down before cutting time.

I happen to think now of a farmer who uses no 16 per cent acid phosphate and is bitterly prejudiced against it. On a piece of ground which brings bumper corn crops, the oats and wheat lodge before they ripen, and usually cause severe loss to him. The soil is rich, but the straw is too weak to stand up under all sorts of weather. Usually a complete fertilizer is used, which greatly aids in causing the grain to lodge. It is certain that if he would use acid phosphate his crop would likely stand up better and ripen a week to ten days earlier, with a possible heavier yield.

Where soil is not fertile, it is a good plan to use a complete fertilizer, but it should analyze pretty high in phosphoric acid, since it causes stiffer straw and an earlier ripening. All this is desirable in an oats crop. We use fertilizer quite liberally, and feel certain that in most instances it pays to use anywhere from 150 to 300 pounds of acid phosphate per acre. On thin soil, use a like amount of complete fertilizer. As before stated, phosphoric acid hastens ripening, which is decidedly desirable when we wish to use the oats ground for wheat. The earlier wheat ground is plowed, the better are the chances for a wheat yield.

Oats a Cool Weather Crop

IN most localities, whether we follow oats with wheat or grass, it is a good plan to sow the oats early, as oats is a cool-weather plant, and it will develop better in the early summer months. If grass is sown, it will also do better if it makes a good start before the hot summer days begin. It is our practice to sow oats as early as we can, depending on the fitness of the soil to till. We have raised good oats that was sown in March, however, March-sown oats are an exception rather than the rule. If we can sow the oats between April 1 and 15, we feel that we have made a good beginning. Oats sown during the latter half of April stands a good chance. But it is far from desirable.

Early sown oats means that the crop is out of the way for giving proper attention to the corn crop, and that

By W. E. FARVER

there is a better opportunity for preparing the seed bed for wheat in the fall, as well as greater chances for a good yield. Late oats rarely yield well.

In plowing corn stubble for oats, we aim to plow deep enough to throw on top all the sod turned under the previous spring for corn. Thorough disking and harrowing gives a firm, mellow seed bed, which conserves moisture for the growing crop. We sometimes use the roller on oats ground previous to sowing, permitting the roller to precede the drill. As a rule, however, we run the roller over the fields when the oats is from 1½ inches to two inches high. We have followed this practice for a number of years with very good results, and so have neighboring farmers.

Clean, Treated Seed Essential

THERE is more connected with the choosing of a suitable variety of oats than many suspect. There are varieties especially adapted to all sections. It is our duty to find which variety is most suitable for our immediate section. Here in our county, farmers have been very enthusiastic and persevering in their efforts to find the one best variety suited to our section. Many varieties have been tried out here, but the variety known as Ohio 8453 has proven best adapted for us. Through the efforts of the county agent, this variety has been brought into our midst. In choosing a variety, it is well to consider early ripening, a medium-sized stiff straw, combined with a heavy yield.

We would not think of sowing oats without first running them over a fanning mill, using a good blast of wind to drive out the light grains and chaff. It is very easy to get a grade of oats in this way that overruns in weight.

We aim to have well-cured oats for seed. We like it from shocks which had little or no rain. For best results, it should be stored in a dry, well-ventilated bin. We find this necessary to good germination. We also find it pays to test the seed previous to sowing and also previous to treatment for smut, for we find from experience that we dare not omit the formalin treatment. We have used both the wet and dry treatments with equally good results, but prefer the dry treatment because of the less work connected.

Usually farmers who hurry through their work give the oats crop more promises than real honest-to-goodness labor when preparing the soil, and then wonder why the crop responds likewise. The secret lies in the fact that oats, like all other crops, will bring yields, compared to the care, interest and attention we give it.

SEED SPECULATION IS COSTLY

Seed brokers, jobbers and dealers throughout America continue to speculate on seed, sometimes with gains to themselves and sometimes with losses. Their speculations pertain strictly to the cash value of the seed, hence their gains and losses are limited to market fluctuations.

On the other hand, the farmer is speculating on the productive value of the seed he buys, and if things are going bad, he has no way of getting out. For instance, if he has planted the seed and he later finds to his sorrow that it is not productive or adapted, he cannot sell the seed and take a partial loss, but faces the loss not only of the full value of the seed, but also of a crop far greater in value than that of the seed. He has no way of covering on his loss or of quickly selling out, but must stand by and take the loss.

Buying seed where the quality and vigor is not known, is a gamble. It is an impossibility to accurately forecast future prices. However, it is not only possible, but practical to forecast the future productivity of the seed.

Farmers' experiences, together with the demonstrations conducted by the various farm bureaus and agricultural colleges, have clearly brought out the fact that buying seed without the origin and quality being known, is taking a big, costly gamble.

The Fight in the Pasture Lot
(Continued from page 306)

lent of around 100 pounds of acid phosphate, 30 to 40 pounds of limestone, as well as nitrogen and potash. With the milk production most dairies get during the late spring and early summer, it is easy to figure out why lime and acid phosphate seem to be needed by many pastures. In addition, from 300 to 500 pounds of lime are removed yearly from an acre by leaching brought about by the rainfall. Where young stock are on pasture, the plant foods are used up rapidly. A 1,000-pound animal sold removes a slightly greater amount than 10,000 pounds of milk.

Another reason for attention to pastures in sections where limestone is lacking is that the blue grass grown where there is plenty of lime contains three times as much lime as that growing on sour soils. This means that it is going to be much harder for the farmer with the acid or sour pasture to produce a thrifty, hard-boned animal until he has done something to build up the lime content.

It has been learned that the reason for the paint brush and other weeds coming into many pastures so freely is that they are nature's scavengers, and can live where some plant food necessary for the growth of grasses is lacking. The grass plants, becoming weak through this lack, are easily driven out by the stronger growing weeds. Thus the problem of the "devil weeds" is solved, once the stocks of plant food have been built up to a point where bluegrass and clover will thrive. If work is started before the pasture becomes too poor, the weakened plants will usually come back without reseeding. Lime and acid phosphate will turn the trick, for most soils of the dairy sections have an abundance of potash, and the clovers will supply the nitrogen, once they have been coaxed back to life.

Briefly summarized, the lessons learned from a tour or inspection of the many trial strips of surface improvement are somewhat as follows: Where the soil contains sufficient lime—and this can be easily ascertained—the application of 16 per cent acid phosphate at the rate of 300 to 400 pounds per acre is usually sufficient. At present prices the cost of the material for an acre will not exceed \$4, and the effect should last for at least three years or more.

Where lime is lacking, an application of one ton of ground limestone will often produce results. The cost of this will vary greatly, according to the distance from the quarry. Approximately, \$2.50 bulk to \$5 in sacks, plus freight, will cover the range of the cost of a ton in most cases. Many pastures, though, are lacking phosphorus as well as lime, and the use of 200 or 300 pounds of the acid rock should be a paying investment. The lime should last from six to ten years before renewal is needed.

As for time of application, the lime and acid phosphate can be put on at any time, although slightly better results may result from fall or early spring treatment. This will enable the dairy farmer to make his pasture improvement work a more or less in-between job. Climatic conditions during the year of application will have some effect on results. The old sod may be gone over with a drag either before or after the lime and phosphate is applied, but this does not always show definite results.

Where the pasture has gotten very poor, and the plant life gone with the exception of the weeds, some grass seed may be necessary. This must be applied very early in the spring, preferably while the ground is honeycombed. The use of a drag when seed is applied is a very good thing. The grass mixtures that are recommended by the Extension Department as being the best are as follows:

Where land is suited for red clover, or where sufficient lime has been applied to make it suitable—

Timothy	8 pounds
Red Clover.....	5 "
Alsike Clover.....	4 "
Kentucky Blue Grass..	4 "
Meadow Fescue.....	4 "
Orchard Grass.....	4 "
White Clover.....	2 "

For land unsuited for growing red clover, the mixture is changed by eliminating red clover, increasing the alsike,

and changing the grasses to suit the conditions. A recommendable mixture is as follows:

Timothy	8 pounds
Red Top.....	4 "
Alsike Clover.....	6 "
Canadian Blue Grass..	4 "
Orchard Grass.....	4 "
White Clover.....	2 "

From one-third to one-half of the mixture selected should be used on an acre the first year. The following spring another application of like amount should be made. These mixtures are also the best for seeding down plow land when it is intended to turn it into pasture later.

With all these things accomplished, the matter of succulent pasture for the

future is left in the hands of nature, to be worked out in her own way and in due course of time.

DO YOUR SEEDINGS WINTERKILL?

How many times have you seen your seedings go into the winter in fine shape only to find them dead in the spring? Thousands of New York farmers have experienced the disastrous effects of such winterkilling, suffering considerable financial loss from idle land; no returns from labor or seed; increased feed bills and decreased milk checks, all due to the fact that the clover and alfalfa seedings failed to survive the winter.

The United States Department of Agriculture, several state agricultural

experiment stations, and numerous farmers have proved that much of the winterkillings of clover and alfalfa is due to the use of unadapted seed. During the past two years, about 1,000 carloads of clover seed and 8,000,000 pounds of alfalfa seed have landed at our eastern seaports. Much of this seed was produced in Italy, Southern France and South America, and is not adapted to the rigorous climate of New York.

Adaptation is one of the most important factors influencing crop production. It is impossible to look at the seed and decide whether or not it is adapted. The only way of being certain is to positively know the heredity of the seed, which means tracing the seed back to the point of production.

The Colt "Gas Well" is placed at any convenient point in the yard

More wonderful than the lamp of Aladdin—

A few pieces of Union Carbide dropped into water, and presto! Conveniences heretofore absolutely impossible on the farm become immediately available.

Union Carbide (a product of which pure lime and coke are the basic materials), fed automatically into water by the Colt "Gas Well," brings to the farm the real home comforts of the city. A flood of sunlight in every room of the house at night—and in the barn, where good light is so necessary! This light works magic in the henhouse—makes hens lay more eggs—heats the incubator, too!

And while you're about it, have a lighting plant that will do your cooking, and your ironing, and your water heating. The Colt "Gas Well" will do it—automatically, no machinery—economically—satisfactorily. You buy Union Carbide direct from convenient Union Carbide Warehouses at factory prices.

Decide now, no need to wait
—take a year to pay

Get the magic story of the Colt Carbide "Gas Well," and how Union Carbide Gas has brought convenience and happiness to over 398,000 farm homes. Send the coupon today—NOW.

Bright Lights for More Eggs

E-B Osborne Crop Savers

E-B Osborne Grain Binders will handle grain in any condition—long, short, down, or tangled—and save all of it!

The strong Z-shaped cutter-bar can be set close to the ground and reel is quickly adjusted to push grain onto platform, regardless of length or condition. Platform canvas automatically straightens grain before it reaches elevator and grain up to 60 ins. long lies straight on binder deck. Compressor is quickly set for tying either large or small bundles, with band placed anywhere from 7 to 24 ins. from butt. Binder deck has ample clearance to prevent clogging. All bundles uniform with square, clean butts.

And **E-B Osborne Corn Binders** work just as satisfactorily in handling the corn crop as E-B Grain Binders do in saving the grain crop.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts
Banish Vermin, Make Fowls Grow
Faster and Increase Egg Yield

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water,

all lice and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big \$1 packages for only \$1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 889, 1100 Coca Cola Bldg., Kansas City, Mo., and the two \$1 packages, enough for 100 gallons of water, will be mailed. Pay the postman \$1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.

"Spraying the Home Garden"

In this little book, by B. G. Pratt, you will find in concise, interesting language, a wealth of information on insects and diseases that infest trees, shrubs, vines, vegetables and flowers—with simple instructions on the control of these pests. In addition is a chapter, "My Rose Bed." Written for the amateur, this booklet is of equal interest to the commercial fruit and truck growers—sent prepaid for 2c stamp. Address Dep't 12, B. G. Pratt Co., 50 Church St., New York

"Tune In" on April 11

A. A. Starts Radio Farm News Service

I AM pleased to announce that beginning Wednesday evening, April 11, the American Agriculturist in co-operation with the American Telephone Company through its broadcasting station WEAH will start a series of talks of special interest and value to farmers.

E. R. Eastman, editor of American Agriculturist, will open the series, which is planned as an experiment, to find out just how radio can best serve the farmers' interests. Mr. Eastman will speak at 7:30 P. M., April 11, to all farm people who tune in at that time for the WEAH program.

Mr. Eastman will emphasize the wonderful possibilities that the radio has for farm people, that the great invention is just in its infancy, and that Western farmers are already using it to a much greater extent than Easterners. He will announce the arrangement of cooperation between the Telephone Company and the American Agriculturist, an experiment to serve farmers through the radio, and if the farmers respond to this experiment, they themselves can largely determine the future usefulness of this great invention.

News the Fundamental Aim

One of the fundamental aims of American Agriculturist is to distribute through its columns the latest news of greatest interest to farmers, this news to be written and interpreted entirely from the farmer's standpoint. The daily newspapers are good and every farm family should have one, but they are written too often by and for city people and do not handle or interpret the news from the viewpoint of farm folks. Moreover, it is difficult, no matter how much reading of the newspaper one does, to get an accurate and concise idea of any situation like that which American Agriculturist recently summarized on what is taking place in the Ruhr Valley. Farmers are taking a part themselves in public matters and public affairs as they never have before, and, as I see it, it is a function of the farm papers to take the lead in reporting and interpreting these public events of such great importance.

It is this thought of reporting the farm news that led us to make this temporary arrangement for broadcasting farm news. In Editor Eastman's first talk, he will illustrate how the radio might be of service to farmers in giving and interpreting the news, by briefly explaining the credit legislation which has just been passed by Congress, and how such legislation might be of use to Eastern farmers.

No subject is of greater interest to farmers in New York State than that of the recommendations of the Committee of Twenty-one on rural schools, and of the Bill now in the New York State Legislature containing those recommendations. A discussion of this subject will be particularly interesting to farm women and American Agriculturist will broadcast on some Wednesday evening a discussion of the Rural School Bill.

An Aid in Production and Marketing

While the agricultural news will be the chief feature of American Agriculturist broadcasting service, yet Mr. Eastman will show in his first talk of what great value the radio can be in making timely suggestion to farmers on both the production and marketing ends of their business. For instance, the San Jose scale, which once threatened the entire apple industry of the East, is now again rapidly spreading. Mr. Eastman will mention this fact as a matter of news, and suggest that the persistent use of lime sulphur, or scabicide, applied just before the buds begin to swell, will hold this pest in check.

Other members of the American Agriculturist staff will lend their aid to make the Wednesday evening farm program broadcasting interesting and valuable. The farm women will be interested in Miss Gabrielle Elliot, household editor, who will gossip over the radio about those things of interest to farm women, about which mere men

know little and care less. The service will probably include broadcasting messages from those genial farm philosophers, well known and loved by farm people throughout the East, Jared Van Wagenen, Jr., and H. E. Cook.

If the interest and appreciation by farm folks justifies a continuance of the American Agriculturist and American Telephone Company farm radio service, it will be possible to have messages from farm leaders such as Enos Lee, President of the State Federation of Farm Bureaus; Mrs. Bridgen of the Home Bureau, Dean Mann of the State College of Agriculture and many others, including possibly talks from New Jersey and Pennsylvania and national leaders.

These are just a few plans showing some of the possibilities for a farmers' real radio service. Whether or not we can continue it will depend largely on the interest of farmers themselves.

WESTERN NEW YORK NOTES

ALVA H. PULVER

The first half of March was favorable to the wheat growers of the Genesee Valley, as a generous blanket of snow protected the young plants from the heavy winds. A heavy acreage of wheat is reported in the valley in spite of the flat prices prevailing last fall, and if all goes well from now on a bumper crop is in prospect.

C. A. McVean and others of Le Roy interested in the preservation of wild game have just released 20 cock and hen species of Northern Quail on the preserve near Le Roy. There are no Northern Quail in this part of the State outside the new arrivals from Michigan.

In the Olean district the veterans of the maple syrup industry are only looking for a poor season this year. The heavy snow, coupled with mid-winter rains, put on a coat of ice while the ground was not frozen deep enough to provide a good flow of sap. Only a cold spell after a thaw will start the sap working through the trees. Trees already tapped indicate but limited flows. In the southern tier of counties, prices this season are expected to run at approximately \$2.25 per gallon for syrup and from 28 to 30 cents a pound for the sugar.

One of the most pretentious reclamation projects in the Arkport and Burns district yet put through is under way whereby an outlay of about \$85,000 will be made for the complete reconstruction of the drainage system, restoring not only the 700 acres now given to cultivation, but opening up 300 virgin acres. This makes it the largest project of its kind attempted in Western New York for some time. Originally the muck area was a swamp running from Arkport northward several miles. By a cooperative effort several years ago a drainage ditch was put through, draining about 700 acres into the Canisteo River.

The spraying of potatoes last year under the direction of the Onondaga County Farm Bureau increased production 62 bushels an acre for members of five spraying associations, with a total of 300 acres. As a result of this success, meetings have been held by the East Camillus and West Camillus associations for pooling orders for copper sulphate and arsenate of lead. The spraying associations of Elbridge, Baldwinsville and Little Utica will soon hold similar meetings.

Genesee Co.—We are all thankful that the spring weather will soon be with us again. We have had a winter that was far more serious than we have had in many years. For nearly four months the snow has been deep and at times traveling was out of the question. Prices of farm products are on the upward trend. Potatoes are now bringing 60c a bushel, beans are 7 and 8c a pound, and wheat is selling at \$1.30. There has been a great deal of sickness in this section during the past few months. We are hoping that with the coming of milder weather there will be an end to it.—J. C. J.

Urge Reciprocity on Truck Licenses in New Jersey and Pennsylvania

W. H. BULLOCK

COMMITTEES of New Jersey and Pennsylvania farmers from the Delaware River Valley waited upon Governor Pinchot at Harrisburg, Pa., last week, in an effort to bring about further reciprocity between the two States on the matter of motor truck licenses. New Jersey farmers who use Eastern Pennsylvania markets, such as Philadelphia and Easton, have been handicapped by the Pennsylvania law which allows motor trucks with New Jersey licenses to enter the State 15 days in a year, but only for a period of one day a week. Eastern Pennsylvania farmers, on the other hand, who use the Phillipsburg, Trenton and Camden markets have likewise been handicapped by the New Jersey law which allows but 15 days in the State, which days may be consecutive if desired.

The committee from New Jersey which is working upon this reciprocity represents such bodies as the New Jersey State Grange, the Federation of County Boards of Agriculture and some of the South Jersey farmers' organizations. The Pennsylvania group was made up of those representing the Inter-State Milk Producers' Association, the Pennsylvania State Grange, the Farm Bureau and other organizations with membership located along the Delaware River border line. By bringing this matter to the attention of Governor Pinchot, both groups hope to work out a plan which will cause less trouble to the farmers hauling farm products from their State to the markets of the other State.

It was called to the Governor's attention that Pennsylvania might so change its license regulations that the 15 days now allowed under the law could be taken consecutively if desired. Also, the representatives asked for a liberal enforcement of the laws of both states such as now exists between New York and New Jersey, which permits the farmers to deliver commodities in the markets of the adjacent state even though it is necessary for them to make a larger number of trips than technically permitted under the law.

The other alternate which has been discussed by representatives of both New Jersey and Pennsylvania is for a free zone along the border line, which might include such territory as greater Philadelphia, some of the smaller towns north along the Delaware and Easton, while in New Jersey it would include Phillipsburg, Trenton, Camden and a few other intermediate points. This whole matter of reciprocity has awakened considerable agitation in both states, and its ultimate adjustment will relieve the farmers of considerable hardship which they now have in the way of meeting motor-truck license requirements.

Gardeners Fighting for Better Markets

Another type of reciprocity is being sought by the market gardeners in Northeastern New Jersey, who sell their products practically the year round in New York City markets. The New Jersey members of the New York Market Gardeners' Association have called upon the New Jersey State Bureau of Markets to work with the State and city marketing officials in New York so that they may have better facilities for marketing their products in the metropolitan area. The antiquated methods and equipment of the farmers' markets in New York City, which have been continually exposed in the last two years, are not in accord with those of progressive farmers' markets in such cities as Rochester, Detroit and Cleveland. The New Jersey gardeners are putting their shoulders to the wheel with the market gardeners of Long Island and Staten Island in the formulating of a constructive program which will ultimately bring about a system of better farmers' markets.

We think more of the good old American Agriculturist than any other farm paper, and we like the good clean stories you print in it. With best wishes to you and your paper for the coming year, we remain.—Earle V. Grace, Lockwood, N. Y.

SOCONY MOTOR OIL for TRACTOR LUBRICATION

More Work Per Gallon

Tractors generally work at practically full load—with the throttle wide open. This produces an unusually high operating heat. For correct lubrication and efficient and economical operation tractors accordingly require an oil especially suited to meet unusually severe service conditions.

Socony Motor Oil is made to stand the extra high operating heat of tractor engines. It insures correct lubrication, full compression and minimum wear on the vital parts of your engine. Gives maximum power with low operation and upkeep expense.

The Socony Motor Oil chart will tell you the correct grade for your tractor. Ask your dealer to show you, or write us direct.

For transmission gears and other parts requiring a heavier oil use Socony Gear Oil—keeps gears operating quietly with least possible wear.

Fill the cups with Socony Cup Grease—a grease of exceptional quality and correct consistency.

For reliable and economical tractor operation buy your oils, greases and fuel where you see the Socony Sign.

Sciences Discovery Routs Chicken Lice

Mineralized Water Gets Rid of Dusting or Spraying—Birds Delouse Themselves. Fine for Baby Chicks and All Poultry.

A recent discovery promises to revolutionize all the commonly accepted methods for keeping poultry free from lice and mites. This wonderful product keeps the poultry always lice-free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Hick's Lice-Go, which is the name of this remarkable lice remedy, is dropped in the chicken's drinking water. Taken into the system of the bird, it comes out through the oil glands of the skin and every louse or mite leaves the body. It is guaranteed to help the hatchability of the eggs and cannot injure the flavor of the eggs or meat; is harmless to chicks and does not affect the plumage. A few days' treatment at the start and then a little added to the drinking water each month is all that is necessary.

Send No Money—just your name and address to Chas. M. Hick & Company, Dept. 442, 1018 So. Wabash Ave., Chicago, Ill. A card will do. Mr. Hick is so confident that Hick's Lice-Go will get rid of every louse or mite that he will send you two large double strength \$1.00 packages for the price of one. When they arrive, pay postman only \$1.00 and postage. Sell one to your neighbor and get yours free. If you are not absolutely satisfied after 30 days' trial, your money will be refunded. This offer is guaranteed by two big Chicago banks, who say that Mr. Hick will do exactly as he agrees without question or argument. Write today before this remarkable trial offer is withdrawn.

and WATER TANKS

Controlling Roup

One of the Most Common Poultry Diseases

ROUP causes a greater mortality among fowls in many sections than does any other disease, hence poultrymen need to be on guard to prevent it if possible and to lessen its ravages when it breaks out in a flock.

By W. G. KRUM

Roup is a germ-disease; the germs apparently being present over a large part of the country awaiting favorable conditions to attack a flock. This disease is often introduced into a flock by the addition of birds from farms where infection exists. It is also thought that the germ may be carried in shipping coops returning from market.

Birds of low vitality are very susceptible to this disease; in fact, are the first usually attacked by it. They should never be allowed to remain in the flock, as they soon spread the disease to the birds that have had their power of resistance lowered by bad surroundings and poor management. Hens may have colds and catarrh without roup,

also disinfect all feed and drinking dishes, put in new dry litter and give plenty of fresh air without a direct draft upon the hens, especially at night. Give good feed and keep the hens busy.

Treating Affected Birds

The affected hens require individual treatment; the worst cases should be killed and burned, while the others may be treated as follows: Wash out the eyes twice daily with a two per cent solution of lukewarm boric acid or creatin, using cotton or a soft cloth; spray the throat and nostrils with the same, or a two per cent solution of tincture of iodine. An ordinary nasal atomizer is very good for applying this spray. When removing cankers from the mouth, paint the wound with clear iodine. A match or toothpick is usually used for applying it. Give each bird one teaspoon of castor oil daily and five

Exercise, feed, ventilation and constitutional vigor all have a bearing on the health of the birds. A cool house is less dangerous than damp quarters

yet these usually precede this disease. Birds that are overfed and underexercised or kept in dark, damp, poorly ventilated houses and exposed to dampness, drafts, or sudden changes of weather, are liable to contract colds and catarrh, and therefore become more susceptible to roup.

The feeding of moist mash instead of dry during the winter tends to decrease the incentive to exercise which is so essential to the maintaining of good health. Mouldy or damaged feed also tends to lower the fowl's vitality.

Three Forms of Roup

There are three forms of roup—that of the nasal passages, the eye and the throat. Nasal roup is shown by a watery discharge from the nose; this has a characteristic odor unlike that of any ordinary catarrhal cold. This discharge becomes thicker until the passage is plugged with yellow, cheesy pus. When the eye is affected, the same symptoms are shown as with the nasal roup. The third form attacks the throat and mouth, first showing dark spots that later form into white diphtheric cankers. In many cases these cankers form in the larynx and cause strangulation. The first symptoms of roup are a loss of appetite and a falling off of egg production. The birds stand around in a listless manner, have difficulty in breathing, have an offensive nasal discharge and a soiling of the feathers under the wings from this discharge. They frequently shake their heads and sneeze. These symptoms are often accompanied by diarrhea.

All affected birds should be removed from the flock as soon as they are discovered and taken to a dry, sunny building and given individual treatment, while the balance of the flock should be given plenty of green food and also one pound of epsom salts dissolved in six or eight quarts of water for each hundred hens, no other water being available until this is used up. The poultry houses should be cleaned up and disinfected. Do not wet the pen in cold weather, but use a strong disinfectant applied with a fine spray pump;

grains of quinine three times a day for several days; give moist feed and plenty of clean water.

Roup is one of those diseases that may be prevented in nearly all cases. First, by keeping only strong, vigorous, well-bred stock. Profit is not always measured by the number of hens one keeps, but by the number of good ones. Keep no low-vitality birds for disease-spreaders. Fowls should be kept in houses that are comfortable, that is, clean, dry and sanitary.

The litter should be changed often, and the house, especially at night, kept well ventilated, as hens require more fresh air than cows or horses. A thousand-pound cow requires 2,804 cubic feet of air every 24 hours; a thousand-pound horse, 3,401, and a thousand pounds of fowls, 8,278 cubic feet. Hens must also be kept busy to maintain a normal temperature of 106.7 degrees Fahrenheit. They should be fed their grain in a deep, dry litter; dry mash maintains better health than does moist mash, as the hens eat a little and eat often, while with moist mash they eat hurriedly and then loaf around.

When purchasing new stock, isolate them for a week or two before placing them with the flock, as they may carry the disease in a mild form. Disinfect all shipping crates as soon as they return from market; also disinfect the houses every time the litter is cleaned out. Give one pound of epsom salts once a month during the winter to each hundred hens, and until they are let out on a green range. Watch the birds closely and study their appetites; when they go off their feed, study and remove the cause before colds and roup cut into the flock and cut out the profits.

Artificial Lights—The poultryman who uses artificial lighting in his hen houses, does well to draw lessons from the past experiences of others, which show that the best results are obtained from an egg production not exceeding fifty per cent. This should be accompanied with a minimum amount of light.

New York Holstein Sale To Be Held at Earlville

EARLVILLE will be the scene of the annual spring Holstein sale, staged by the New York Holstein-Friesian Association. The date is May 8-9.

It is expected that about 150 pure bred Holsteins will be sold. All entries will be passed on by the county officers of Holstein clubs before they are accepted by the State association. Animals must be good individuals and sound and right in every way.

NEW CHAMPION OF HOLSTEINS IN NEW YORK

It has been announced by the Advanced Registry Office of the Holstein-Friesian Association of America, that Winana Segis May 2nd is the new champion in New York State in the senior four-year class of the ten months division. She is owned by Henry Morgenthau Jr., of Hopewell Junction, N. Y., owner and publisher of the American Agriculturist.

During her test, Winana Segis May 2nd produced 19,945 pounds of milk and 876.74 pounds of butter. The remarkable part of the record lies in the fact, that during the last two months she was only on two milkings per day. Had she been on her normal schedule of four milkings per day, there is no question but what she would have gone into the 1,000-pound class.

As I View Long Island

(Continued from page 311)

in the rest of the State. Brussels sprouts, for example, seem to stand unprotected in the fields and to be picked throughout the winter as needed.

Now, I am going to say a very frank and friendly word about Long Island agriculture. I say it with hesitation because I hope I have some very good friends there, and some day I want to go back again. I admire the island and its farm people so sincerely that I feel sure they will pardon me for remarking that there is very, very little land that is really fertile, as judged by the standard of the better up-State soils. Understand me, there is plenty of splendid, intensive farming—we can all learn from them in this respect. So, too, land values are high, and, on the whole, the farmers prosper. Perhaps there is no part of our State, unless it be in the wonderful Ontario Shore country, where there is as high an average standard of rural civilization as in some communities I could name. They are blessed with a kindly climate and with a light and friable sandy loam soil that it is a delight to stir with a cultivator or hoe. Moreover, their markets are very accessible, and in the old days they had cheap and abundant supplies of city stable manure—something less important now than formerly. I am an enthusiast on the subject of stable manure, but if I were dependent upon this stuff, made in the city, sold by the ton after it has been watered with the hose until the ears drip as they roll, I would surely take to chemicals and cover crops. I think that more and more the island is coming to this conclusion.

Plant Food is Purchased

Now, will anybody be very angry if I say that natural fertility is not abundant, and that the climate is unfavorable to their utmost important crop—potatoes. The fact that they use at least a ton of high-grade fertilizer per acre bears witness to the truth of the first assertion, and the fact that the potato fails to maintain its vigor of constitution when grown under island conditions, testifies to the correctness of the second observation, and having gotten this off my chest, I feel better. In other words, the Long Island grower succeeds splendidly in spite of and not because of his surroundings. Given the natural advantages of, say Franklin County, along with the islander's exact methods and skill, and potatoes would be knee-deep all over the field after he dug 'em. But Long Island potatoes are of good quality, and because they are smooth and uniform and carefully graded and clean, they do top the New York market.

Keep ewes in thrifty condition.

CRANE TRIPLE WALL SILOS

Lasting Satisfaction

You can easily tell a Craine 3-Wall Silo from any other. It is the only manufactured wood silo that has neither hoops nor lugs to hold it together.

It gives its owner lasting satisfaction. It is the cheapest silo to own. It stays put without tinkering.

Craine Silos are constructed to keep warmth and juices in; to keep cold and weather out. A strong stave silo inside is covered with thick Silafelt, and the patented, Crainelox Spiral Covering outside binds the entire structure. This forms a handsome building with every square inch of surface protected in every direction.

Any old stave, iron-hooped silo can be rebuilt into a permanent Craine 3-Wall Silo at about half the cost of a new one.

Killed 200 Rats At One Baiting

Dog, Ferret and Traps Failed. Amazing Virus Quickly Killed Them All. Not a Poison.

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Was discouraged. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

"The year previous Rats killed 200 out of 300 baby chicks. Last year saved them all. Will send for 10 bottles for neighbors, and we will clean up the whole neighborhood."

Rats, Mice, Gophers, in fact all Rodents, greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside hunting air and water. Harmless to humans, poultry, pet stock, etc. Economical to use. Indorsed by Farm Bureau Experts and large, nationally known institutions everywhere.

You Can Get Yours Free.

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 2000 Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay post-man only \$1.00 and few cents postage on arrival. Use one yourself and sell the other to a neighbor, thus getting yours free. This special Introductory Offer also applies to the regular \$2.00 size, containing three times the quantity. This size is economical for killing large herds of rats, or in badly infested warehouses, scattered out-buildings, poultry houses, etc., or fields of Gophers. Simply specify that you be sent two of the regular \$2.00 sizes for the price of one. Readers risk no money, as Imperial Laboratories are fully responsible and will refund the cost on request any time within 30 days.

"As a mortgage lifter the hog has nothing on a De Laval Cream Separator"

"My work as field man for the Wisconsin State Dairymen's Association," says Herman Marx, in a recent letter, "brings me into contact with a great many farmers and a great many separators. Of all the farmers who own separators, I find about 80% of them own a De Laval."

"For close skimming, low upkeep, easy running and long life it is hard to beat a De Laval. I have adjusted a good many separators and I find that the easiest one to adjust is a De Laval."

"A hog has always been called a mortgage lifter, but he has nothing on a De Laval Separator. I have known several instances where the buying of a De Laval

in place of some other they were using saved enough money to pay the interest on a fair sized loan."

—A remarkable tribute to the De Laval Separator, not only because it shows that the majority of experienced farmers in the great dairy state of Wisconsin use and appreciate the De Laval, but because it proves that it makes them money as well.

The present De Laval is the best De Laval Separator ever made. It skims cleaner, lasts longer and is easier to clean and operate than any other. It will pay for itself in a year's time, and is sold on such easy terms that you can use it while it is doing so. See your local De Laval Agent or write us for complete information.

Cleared Up Bad Abortion

Don't give up the abortive cow as lost until you have given Kow-Kare a chance. We receive yearly hundreds of letters telling of complete recoveries through the use of Kow-Kare. Here is one from Joseph E. Frank, East Earle, Pa:

"Early in the spring I had a cow that was affected with Abortion which had taken a bad start, so I sent for a veterinary but the cow kept getting worse and did not eat hardly anything for two weeks and the doctor said she would die as she was so weak she could not stand up any more and he could do nothing for her so I went and got a box of Kow-Kare and gave it according to directions and in three days she was on her feet and eating real good. Today she is as good a cow as you can find. So I must say that Kow-Kare saved her and will others just the same, as this was a very bad case when I started."

Not all abortion is curable, but usually it is the result of a badly run down condition of the genital organs. It is these organs and the digestive functions that Kow-Kare rebuilds. Its medicinal aid is without an equal in the treatment of Barrenness, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite—all of them resulting from impairment of the genital and digestive functions.

No cow should go through calf-birth without the support of Kow-Kare. A tablespoonful twice a day for two weeks before and after will accomplish wonderful results.

Send for free book "The Home Cow Doctor." This fine 32 page treatise will give you scores of money-making and money-saving tips on the care of cows.

You can find Kow-Kare at general stores, feed stores and druggists. If your dealer is not supplied, we will mail postpaid.

Are Box Stalls Essential?

A Practical Suggestion for the Man Who Sells Cows

IT is not uncommon to see advertisements of

By H. E. BABCOCK

ing good grade cattle to sell. It would seem

that here is an opportunity for the farmer who lives back on the hills, or a good distance from a milk station. Most farmers so located turn off several animals a year, and the sale of this surplus dairy stock constitutes a good share of their farm income. It would seem that since they have the system already established it would pay them to study a little more closely market requirements and to have their animals in condition to meet them.

Most men who go out to buy cows these days, unless they are doing it for purely speculative purposes, want animals that show unmistakable evidences of freshening soon; they want cows of good size, and they want cows with good, square udders and fair-sized, well-placed teats.

In addition, if they are buying animals for immediate dairy purposes, they must have condition. A thin cow cannot milk well, no matter how good her intentions may be. Farmers, it would seem to me from what practical experience I have had, who desire to sell off cows as a regular crop, should do what the horse dealers do, and what I am told the Middle West farmers who raise horses for sale do. They should grow up large animals; they should use bulls which will give them the type that the market requires, and, above all things, they should have their animals in condition.

BOX-STALL PRODUCTION		
February	1....	59.0 pounds
	2....	58.6 "
	3....	59.3 "
	26....	58.7 "
	27....	55.3 "
	28....	57.9 "

STANCHION PRODUCTION		
March	2.....	58.2 pounds
	3.....	57.8 "
	4.....	57.6 "
	22.....	58.3 "
	23.....	60.0 "
	24.....	60.3 "

It will be noted that contrary to expectations, three weeks after she was shifted from the box-stall to the stanchion and six months after being fresh, she was giving more milk than when in the box-stall.

More Contented in the Stanchions

Those of us who have watched her believe that she seems more contented and happy, and feeds better standing in the row with the other cows than when she was alone in the box-stall.

This observation is also borne out in the case of another cow which is still in a box-stall, but which to my certain knowledge stands in exactly the same spot in the stall day after day, not moving as much as she would were she in a swing stanchion.

Of course, there is no comparison between the amount of labor required to take care of a cow in a stanchion and in a box-stall. In our experience, at least with cows which have been raised and developed under practical farm conditions, box-stalls for advanced registry work are not essential. In fact, it is doubtful if one can afford to use them.

I realize that this might not be true in the case of those herds which have been pampered and where young animals have been accustomed to individual box-stall conditions instead of herd care.

A LESSON FOR DAIRYMEN FROM HORSE DEALERS

I remember one time when I was in Buffalo on a visit to the stockyards I came upon one of the big horse sales stables which are run in connection with the stockyards, and here I saw dozens of horses, some of them quite inferior specimens, being fed and groomed for the farmer trade in New York State.

Recently I have been trying to pick up quite a number of dairy cows. I have found plenty of cows for sale, but I have found very few animals which it would pay a man with high-priced land and high-priced labor to buy. Most of the cows I have seen have been altogether too thin to be good buys.

The comparison between what I saw in Buffalo and what I have seen in the barns of the farmers who have cows to sell leads me to wonder why more men do not make a specialty of rais-

DAIRY SUBSTITUTES ON THE WANE

H. H. LYON

Long have many of us desired to see substitutes that masquerade under false colors put in the discard. There are many of them but my interest just now is in the substitutes for our dairy products. Prominent among these are of course oleo and filled milk. Our dairy organizations have done much to challenge the right of way for both of these and public sentiment has undergone a great change in respect to their use. Oleo is now omitted from the shelves of a considerable number of grocers in country towns. In some cases an entire village has gone on record as having none of it. In most of these cases it has been done by the local farmers who brought some pressure to bear on the dealers. Frequently a dealer has been glad of an excuse not to handle the substitute. There are those who contend that oleo will be entirely banished, but I do not expect to see that day. Certainly it is no longer quite so popular to sell or to use butter substitutes in most of our moderate sized towns and public sentiment is a most powerful factor.

As for filled milk, it seems to be going the same way. Laws have been passed against it and a great many more such laws are sure to be enacted. We have what seems to be authentic statements that several manufacturers have decided that sentiment is such that they cannot afford to longer continue in the business and that they will turn to the legitimate product. I realize that it is sometimes one thing to get such a statement from a manufacturer when he is being prosecuted for some violation of the law and another to secure his loyalty to his promise. However there are certain cases where this talk seems to be sincere. I look for public sentiment to drive many of the imitations out of the markets. We need not think that such sentiment will take care of the job entirely, for it will not. We must keep continually at the business, go after legislation to control oleo and other substitutes and place them where they will do the least harm.

Treating Animal Lice—If the weather is too cold to spray horses or cattle for lice they can be treated by dusting with a powder made up of one part of sodium fluoride and five parts of wheat middlings or other inert powder. Care should be taken not to get the powder into the eyes or on mucous membranes and not to get too much on any one animal, one pound being sufficient for five animals.

HOW to BREAK and TRAIN HORSES

The Motherless Lamb

ROBERT H. NEILL

ONE of the many problems that confronts the sheep-raiser each spring is the solution of the motherless lamb. There are a good many ways of prevailing on the ewe to own her lamb, but none of them are specifics. Often the breeder has to resort to all sorts of devices before he succeeds. At the best success is only attained by the most patient, persistent effort.

The first step is to confine the ewe with her lamb, away from the sight and hearing of the rest of the flock, if possible, and then, several times a day, compel her to stand and let the lamb suck. At first, if the lamb is weak and helpless, she may have to be held, but as the lamb grows stronger and more able to help herself, she can usually be cornered and made to stand. A sharp switch may be found useful, by cutting her sharply across the nose when she fights her lamb or refuses to stand. She will soon learn that the only way to escape punishment is to stand quiet while the lamb takes its nourishment.

When the ewe learns to stand with the boss at hand the battle is nearly won, and in a few days she gives up and can be turned with the rest of the flock; but it is best to watch her for a few days, as she may desert the lamb when turned with the flock. She may need a second term of imprisonment to work an absolute reform.

A lamb can be easily raised by hand, but it costs more in milk than it is worth, to say nothing of the work, and, besides, a hand-fed lamb is a nuisance.

If a ewe loses her lamb she can usually be made to adopt a disowned twin, as by proceeding as in the case of the disowned lamb. If a ewe has plenty of milk she can almost always be made to own her lamb or adopt another, but if she has no milk the case is about hopeless. Sometimes, by nursing the lamb along on a bottle a few days, the ewe will come to her milk all right and be able to take care of her lamb.

TREATMENT FOR STOMACH WORMS

I have a five-year old ram. Is he too old to use for breeding during the coming season? I do not wish to part with him if he is of any use. I also have one ewe that is rather poor in flesh, although she seems perfectly well otherwise. Is this due to an attack of stomach worms? If it is, what remedies would you suggest? It is not due to the ration she is getting, for she gets grain 10 months of the year.—D. D. F., New York.

The age of your ram should not impair him for breeding purposes. If he is in good condition, has had plenty of exercise and receives a good grain ration, there is no reason why he should not be sure. The grain ration should consist of equal parts whole corn, oats and wheat bran.

Regarding the ewe that is thin, it may be well to examine her mouth for a bad tooth which may be preventing her from eating well. However, as you say, it may be that she has stomach worms. Tobacco dust mixed with salt and kept before the flock all of the time acts as a good preventive. It would be well for you to drench this ewe, using the method suggested in Farmers' Bulletin 1150, issued by the U. S. Department of Agriculture. The method is briefly as follows:

"Dissolve one-half pound of the powdered crystals of copper sulphate in one pound of boiling water, using a porcelain or enamel-ware dish, as blue-stone will corrode most metals. Add enough cold water to make three gallons, using wooden, earthenware, or other non-metallic receptacles. This will make an approximately 1 per cent solution, and will be sufficient to dust 100 adult sheep, allowing for about a 10 per cent waste." The foregoing will give you the proportions. Now, you will only want to make a fraction of this quantity. For sheep past one year of age, use 3½ ounces of the 1 per cent solution.

In drenching the ewe, it is well to use a narrow-necked bottle. It is customary to starve the ewe over night. While drenching, the sheep should remain on all four legs, with head horizontal. This is very important, for if the head is held above the horizontal (nose higher than the eyes) there is danger of some of the fluid passing into the lungs and strangling the sheep.

THE QUAKER OATS COMPANY.
Gentlemen:
We have used Sugared Schumacher Feed as the base of our rations ever since it was put on the market. The fact that we are using it for all our stock is evidence enough as to what we think of Sugared Schumacher.
The man in charge of our hogs says they will leave all other feeds until they have cleaned up the Sugared Schumacher. The horsemen like it as part of the ration and of course we use it for cows and young stock and like it very much.
(Signed) HOOD FARM, Inc.
Lowell, Mass.
Per J. E. Dodge, Mgr.

Hood Farm Uses SUGARED SCHUMACHER FEED As the Base of All Their Rations

The satisfaction and splendid results obtained by Hood Farm with Sugared Schumacher Feed as stated in above letter is typical of what this feed is doing for thousands of the country's foremost dairymen and farmers who are using it as the base or maintenance part of their ration.

D-4

Sugared Schumacher Feed is made of Corn, Oats, Barley, and Wheat, the greatest carbohydrates grains in the world. These grains, finely ground, are properly balanced, combined with Oil Meals and Salt and then sweetened with Cane Molasses, which gives it unusual palatability.

Sugared Schumacher when fed as the base or maintenance part of the ration supplies the dairy cow with vigor, energy and endurance, improves health conditions—enables her to give maximum milk yields over a long period, and it's the long-time milk production that is most profitable.

Give Sugared Schumacher a trial. Your dealer can supply you.

CATTLE BREEDERS

Capacity!

Every man who milks cows for a living knows that Capacity and the ability to profitably utilize feed mean the difference between profit and loss.

CAPACITY ENABLES HOLSTEINS —

to subsist very largely on home-grown feeds; to convert most economically large amounts of cheap roughage into milk and butter-fat; to respond readily to additional grain feed with increased production. In short, to utilize most profitably all feed fit for a cow.

Let Us Tell You the Story of the Holstein Cow.

EXTENSION SERVICE,
The Holstein-Friesian Association of America

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

"I saw your ad in the American Agriculturist"

Not many words or much trouble to write. But sometimes a few words do big things.

And if you include those few words when ordering from our advertisers we guarantee to refund the purchase price of any article that is found not to be as advertised, if the advertiser fails to make good.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437

Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

Choosing and Buying a Farm

(Continued from page 307)

farm. Moreover, there will be considerable loss of time from productive work when the building repair work is being carried on. A farm which has well-arranged buildings in a good state of repair may be ready for business at once. It is generally a much cheaper proposition than a farm with poor buildings, and it needs no loss of the owner's time before being ready for business.

Select a Productive Farm

In choosing a farm, one should give considerable attention to the natural fertility of the soil and to the present state of fertility. As in the case of farm buildings, it is generally much cheaper to purchase a farm which is in a high state of productivity than to purchase a worn-out farm and attempt to build it up. Occasionally a run-down farm may be purchased so cheap that it will pay to improve it, but generally

farm, or in hauling farm products to the railroad.

A farm which is located near good neighbors is worth more than an isolated farm. It is worth something to the farm business to have rural free delivery and telephone service. Location near a trolley line is valuable. Well-built and well-organized churches, schools, granges, and other social institutions make a farm worth more. If the farm is too far from high school, then children must be sent away and board with a strange family in order to complete their high school education.

With the development of trunk lines, of State roads, and the rapid increase in number of automobiles, there is a considerable market value in the location of a farm on the State road. Many such farms are now selling considerable quantities of fruit, vegetables, and other products to the passing public.

There are many other items to con-

Buy a farm when the crops are growing

it is more economical to purchase the farm which is in good condition.

The fertility of the soil will be indicated to a considerable extent by the character of the crops which are growing and the crop yields for the present year. A good time to view a farm is in June or July, just before the hay is cut. Most Eastern farms have half or more of their crop area in hay each year. Hay is one of the best indications of the fertility of the soil.

A soil which contains considerable limestone is generally a much more productive soil than one which is deficient in lime. The presence of limestone may be indicated by particles of limestone in the soil, by the growth of clover or alfalfa, or by a number of laboratory tests which can be made by the County Agent, or by the nearest Agricultural College or Experiment Station.

The character of the soil should be considered in selecting a farm. A heavy clay or sandy soil is harder to work and is not well adapted for potatoes and does not produce the best crops of cabbage, corn or vegetables. A heavy soil cannot be worked when it is too wet or too dry. It is not adapted to a wide range of crops. On the other hand, a heavy soil ordinarily contains a considerable amount of fertility, and is very retentive of moisture and of fertility.

A loamy soil is adapted for the production of a wide range of crops, although it will not ordinarily produce quite as good hay or grain as heavier soils. It is easier to work, can be worked when it is somewhat wet, or when it is rather dry. It is not as retentive of moisture or fertility as the heavier soils.

Sandy and gravelly soils may be very dry or subject to drouth. They may be leachy or subject to a quick loss of soil fertility. They are easy to work, warm up quickly in the spring, produce early crops and are specially well adapted for some crops such as vegetables.

The condition of the roads must be considered under the factor of distance to market. A farmer who is six miles from market on a good macadam road may find it easier to market its products than one which is three miles distant on a bad dirt road. If there is a very bad hill between the farm and market, it may mean expensive labor in hauling feed or fertilizer to the

sider in purchasing a farm. A healthful location is an economic factor which must be considered. The tax rate of the township or school district should be considered, especially since the very great rise in taxes during the past few years.

The Farm Water Supply and Other Factors

The water supply is very important. In fact, this may be an absolute limiting factor in the value of a farm. A dairy farm which must depend upon wells is at a considerable disadvantage over one that has running water in the barns from a spring which is higher than the buildings. A gravity water system can be maintained at very little expense. Any other water system is maintained at considerable annual expense and with constant risk of trouble.

Orchards and vineyards may add considerable to the value of the farm. The value of the farm as a home is one of the most important items to consider.

The probability of an increase in the value of the farm should be given considerable weight.

In choosing between two farms, it is well to work out for each the number of acres of crop land, pasture land, waste land, and to put a separate value on these. Often we find that what appears to be the most expensive farm, is really much the cheaper farm because it has so much more crop land and so much more better improvements.

Do Not Be Too Hasty

Do not be in too great a hurry to purchase a farm. There are nearly 200,000 farms in New York State. Many of these are for sale each year. There are thousands of farms in the State that are for sale each year at a very reasonable price. It is a common occurrence to have a real estate agent rush one into the purchase of a farm with the argument that this farm may be lost if not snapped up at once. Ordinarily, farms do not sell immediately after coming on the market. They generally move rather slowly. The prospective buyer should take plenty of time to satisfy himself that he wants this farm before purchasing. Meanwhile, if someone else purchases it ahead of you, remember that there are a large number of farms for sale and you can probably find many others that will suit you as well as this one.

Easy Now to Rid Your Farm of Rats

Wonderful Discovery by Noted Scientist

Kills Every Rat Within a Week's

Time—Not a Poison.

Rats cost farmers over two hundred millions of dollars a year, through the destruction of grain, poultry and buildings. Farmers need no longer suffer this loss because they can now kill off all the rats on their farm in less than a week's time. This is possible through the remarkable discovery of E. R. Alexander, a Kansas City chemist, who has perfected a virus which kills rats, mice and gophers as though by magic. This product is not a poison—it can be eaten by human beings or any animal on the farm as safely as their regular food, but means quick, sure death to rats.

This wonderful rat virus, which is known as Alexander Rat-Killer, is merely mixed with bread or meat scraps and placed where rats, mice or gophers can get to it. Within a few hours after a rat has eaten Alexander Rat-Killer he gets a high fever and suffers a terrible thirst. He leaves the barns and nesting holes and goes to the open fields in search of pure air and running water. Rats and mice affected always die away from the barns and houses, so there is no odor.

It is a scientific fact that one rat affects others and soon the whole colony leaves the buildings and dies. And though this virus is absolutely deadly to rats—chickens, hogs, cattle or any farm animal can eat it and not be affected at all.

So confident is Mr. Alexander that Alexander Rat-Killer will kill every rat on your farm in less than a week's time that he offers to send, as an introductory offer, a regular \$2.00 tube for only \$1.00. Give it according to directions, and if at the end of a week's time you are able to discover any rats, mice or gophers on your farm, your money will be refunded. A big Kansas City bank guarantees that Mr. Alexander is reliable and will do as he says.

Send NO MONEY. Just write to E. R. Alexander, Alexander Laboratories, 244 Gateway Station, Kansas City, Mo., and the tube will be mailed at once. When it arrives, pay the postman only one dollar and postage on the guarantee that if not absolutely satisfactory your money will be returned without question. Write today—a postcard will do—and stop your rat losses now.

The Valley of the Giants—By Peter B. Kyne

THE dictograph for Shirley arrived on the regular passenger-steamer Thursday, and Bryce called her up to ask when she desired it sent over.

"Good morning, Mr. Cardigan," she greeted him cheerily. "How do you feel this morning? Any the worse for having permitted yourself to be human last night?"

"Why, I feel pretty fine, Shirley. I think it did me a lot of good to crawl out of my shell last night."

"You feel encouraged to go on living, eh?"

"Yes."

"And fighting?"

"By all means."

"Then something has occurred to give you new courage?"

"Oh, many things. Didn't I give an exhibition of my courage in accepting Ogilvy's invitation to dinner, knowing you were going to be there?"

She did not like that. "You carry your frankness to extremes, my friend," she retorted. "I'm sure I've always been much nicer to you than you deserve."

"Nevertheless there wasn't any reason why I should tantalize myself last night."

"Then why did you come?" He had a suspicion that she was laughing silently at him.

"Partly to please Ogilvy, who has fallen head over heels in love with Moira; partly to please Moira, who wanted me to meet you; but mostly to please myself, because, while I dreaded it, nevertheless I wanted to see you again. I comforted myself with the thought that for the sake of appearances we dared not quarrel in the presence of Moira and my friend Ogilvy. At any rate, I have seldom had more enjoyment when partaking of a meal with an enemy."

"Please do not say that," she answered. "I am your opponent, but not your enemy."

"That's nice of you. By the way, Shirley, you may inform your uncle at breakfast Friday morning about my connection with the N. C. O. In fact, I think it would be far better for you if you made it a point to do so."

"Why?"

"Because both Ogilvy and myself have a very strong suspicion that your uncle has a detective or two on our trails. There was a strange man around him all day yesterday, and I noticed a fellow following my car last night. I communicated my suspicions to Ogilvy, and this morning he spent two hours trying to shake the same man off his trail—and couldn't. So I judge your uncle will learn to-day that you dined with us last night."

"Oh, dear! That's terrible."

"Ashamed of having been seen in my company, eh?"

"Please don't. Are you quite serious?"

"Quite."

"Uncle Seth will think it so—so strange."

"He'll probably tell you about it. Better beat him to the issue by fessing up, Shirley. Doubtless his suspicions are already aroused, and if you inform him that I am the real builder of the N. C. O., he'll think you've been doing a little private gum-shoe work on behalf of the Laguna Grande Lumber Company."

"Which is exactly what I have been doing," she reminded him.

"I know. But then, I'm not afraid of you, Shirley—that is, any more. And after Friday morning I'll not be afraid of your uncle."

"Oh, dear! I feel as if I were a conspirator."

"I believe you are one. Your dictograph has arrived. Shall I send George Sea Otter over with it? And have you somebody to install it?"

"Oh, bother! Does it have to be installed?"

"It does. You hide the contraption in the room where the conspirators conspire; then you run wires from it into another room where the detectives listen in on the receivers."

"Could George Sea Otter install it?"

"I think he could."

"Will he tell anybody?"

"Not if you ask him not to."

"Very well, then. Please send him over. Thank you so much, Bryce Cardigan. You're an awful good old sort, after all. Really, it hurts me to have to oppose you."

"Let us not argue the question, Shirley. Good-bye."

HE had scarcely finished telephoning George Sea Otter, when Buck Ogilvy strolled into the office and tossed a document on his desk. "There's your little old temporary franchise, old thing," he announced; and with many a hearty laugh he related to Bryce the ingenious means by which he had obtained it. "And now if you will phone your logging-camp and instruct the woods-boss to lay off about fifty men to rest for the day, pending a hard night's work, and arrange to send them down on the

last log-train to-day, I'll drop around after dinner and we'll fly to that jump-crossing. Here's a list of the tools we'll need."

"I'll telephone Colonel Pennington's manager and ask him to kick a switch-engine in on the Laurel Creek spur and snake those flat-cars with my rails aboard out to the junction with the main line," Bryce replied. And he called up—only to be informed by Colonel Pennington himself that it would be impossible to send the switch-engine in until the following afternoon. The Colonel was sorry, but the switch-engine was in the shop having the brick in her fire-box renewed, while the mogul that hauled the log trains would not have time to attend to the matter.

"Why not switch back with the mogul after the log-train has been hauled out on the main line?" Bryce demanded.

Pennington, however, was not trapped. "My dear fellow," he replied patronizingly, "quite impossible, I assure you. That old trestle across the creek. While I'd send the light switch-engine over it and have no fears—"

"I happen to know, Colonel, that the big mogul kicked those flats in to load the rails!"

"And what happened? Why, that old trestle squeaked and shook and gave every evidence of being about to buckle in the center. My engineer threatened to quit if I sent him in again."

"Very well. I suppose I'll have to wait for the switch-engine," Bryce replied resignedly, and hung up. He turned a troubled face to Ogilvy. "Checkmated!" he announced. "The Colonel is lying, Buck, and I've caught him. As a matter of fact, the mogul didn't kick those flats in at all. The switch-engine did—and I know it. Now I'm going to send a man over to snoop around Pennington's roundhouse and verify his report about the switch-engine."

HALF an hour later the messenger returned with the information that not only was the switch engine not in the shop but her fire-box had been overhauled the week before and was reported in excellent condition.

"That settles it," Buck Ogilvy mourned. "He had gum-shoe men on my trail, after all; they have reported, and the Colonel is as suspicious as a rhino."

"Exactly, Buck. He is delaying the game until he can learn something definite." He drummed idly on his desk for several minutes. Then:

"Buck, can you run a locomotive?"

"With one hand, old man."

"Fine business! Well, I guess we'll put in that crossing to-morrow night. The switch-engine will be in the roundhouse at Pennington's mill to-morrow night so we can't steal that; but we can steal the mogul. I'll just send word up to my woods-boss not to have his train loaded when the mogul comes up late to-morrow afternoon to haul it down. He will explain to the engineer and fireman that our big bull donkey went out and we couldn't get our logs down in time to get them loaded. Of course, the engine-crew won't bother to run down to Sequoia for the night—that is, they won't run the mogul down. They'll just leave her at our log-land-

ing and put up for the night at our camp. However, if they should want to return to Sequoia, they'll borrow my track-walker's velocipede."

"But how do you know they will put up at your camp all night, Bryce?"

"My men will make them comfortable, and it means they can lie abed until seven o'clock instead of having to roll out at five o'clock. If they do not stay at our logging-camp, the mogul will stay there, provided my woods-foreman lends them my velocipede. The fireman would prefer that to firing that big mogul all the way back to Sequoia."

"Yes," Buck agreed, "I think he would."

"There is a slight grade at our log-landing. I know that, because the air leaked out of the brakes on a log-train a short time ago, and the train ran away. Now, the engine-crew will set the airbrakes on the mogul and leave her with steam up all night; they'll not blow her down, for that would mean work firing her in the morning. Our task, Buck, will be to throw off the airbrakes and let her glide silently out of our log-landing. About a mile down the road we'll stop, get up steam, run down to the junction with the main line, back in on the Laurel Creek spur, couple on to those flat-cars and breeze merrily down to Sequoia with them. Our men will be congregated in our dry-yard just off Water Street near B, waiting for us to arrive with the rails—and bingo—we go to it. After we drop the flats, we'll run the engine back to the woods, leave it where we found it, return a-flying on the velocipede, if it's there, or in my automobile, if it isn't there. You can get back in ample time to superintend the cutting of the crossing!"

"Spoken like a man!" quoth Buck Ogilvy. "You're the one man in this world for whom I'd steal a locomotive. At-a boy!"

Had they known of Pennington's plans to entertain Mayor Poundstone on Thursday night, it is probable they would not have cheered until those flat-cars were out of the woods.

CHATER XXV

MAYOR Poundstone and his wife arrived at Redwood Boulevard at six forty-five Thursday evening. It was with a profound feeling of relief that His Honor lifted the lady from their modest little "flivver," for once inside the Pennington house, he felt, he would be free from a persecution inaugurated by his wife about three months previously. Mrs. Poundstone wanted a new automobile.

"I feel like a perfect fool, calling in this filthy little rattletrap," Mrs. Poundstone protested as they passed up the cement walk.

Mayor Poundstone paused. He had reached the breaking-point.

"In pity's name," he growled, "talk about something else. Give me one night of peace."

"I can't help it," Mrs. P. retorted with asperity. She pointed to Shirley Sumner's car parked under the portecochère. "If I had a sedan like that, I could die happy. It only cost thirty-two hundred and fifty dollars."

"I paid six hundred and fifty for the rattletrap, and I couldn't afford that," he almost whimpered. "You were happy with it until I was elected mayor."

"You forget our social position, my dear," she purred sweetly.

"Hang your social position," he gritted savagely. "Social position in a sawmill town! Rats!"

"Sh—sh! Control yourself, Henry!" She lifted the huge knocker.

"You'll drive me crazy yet," Poundstone gurgled, and subsided.

The Pennington butler opened the door and swept them with a faintly disapproving glance.

The Poundstones entered. At the entrance to the living room the butler announced sonorously: "Mayor Poundstone and Mrs. Poundstone."

"Glad to see you," Colonel Pennington boomed with his best air of hearty expansiveness. "Well, well," he continued, leading Mrs. Poundstone to a divan in front of the fire, "this is certainly delightful. My niece will be down in two shakes of a lamb's tail."

Shirley entered the room; and the Colonel, leaving her to entertain the guests, went to a small sideboard in one corner and brought forth the "materials," as he jocularly termed them.

"To your beautiful eyes, Mrs. Poundstone," was Pennington's debonair toast as he fixed Mrs. P.'s green orbs with his own.

"Dee-licious," murmured Mrs. Poundstone. "Perfectly dee-licious. And not a bit strong!"

"Have another," her hospitable host suggested, and he poured it, quite oblivious of the frightened wink which the mayor telegraphed his wife.

They "smoked up," and Poundstone prayed that Mrs. P. would not discuss automobiles.

ALAS! The two cocktails which Mrs. Poundstone had assimilated contained just sufficient "kick" to loosen the lady's tongue.

"I was telling Henry as we came up the walk how greatly I envied you that beautiful sedan, Miss Sumner," she gushed.

Poundstone made one futile attempt to head her off. "And I was telling Mrs. Poundstone," he struck in with a pathetic attempt to appear humorous, "that a little jitney was our gait, and that she might as well abandon her yearning for a closed car."

"Never, my dear." She shook a coy finger at him. "You dear old tightie," she cooed, "you don't realize what a closed car means to a woman."

"Heard the McKinnon people had a man killed up in their woods yesterday, Colonel," Poundstone remarked, hoping against hope to divert the conversation.

"Yes. The fellow's own fault," Pennington replied. "He was warned that the logging-cable was weak at that old splice and liable to pull out of the becket—and sure enough it did."

"I hold to the opinion," Mrs. Poundstone interrupted, "that if one wishes for a thing hard enough, one is bound to get it."

"My dear," said Mr. Poundstone impressively; "if you would only confine yourself to wishing, I assure you your chances for success would be infinitely brighter."

There was no mistaking this rebuke. Shirley and her uncle saw the Mayor's lady flush slightly; they caught the glint of murder in His Honor's eye; and with the nicest tact in the world, Shirley adroitly changed the subject, and Mrs. Poundstone subsided.

About nine o'clock, Shirley, in response to a glance from her relative, convoyed Mrs. Poundstone upstairs, leaving her uncle alone with his prey. Instantly Pennington got down to business.

"Well," he queried, apropos of nothing, "what do you hear with reference to the Northern-California-Oregon Railroad?"

(Continued on page 323)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

BRYCE CARDIGAN and Buck Ogilvy are determined that that jump-crossing shall go in. Colonel Seth is equally determined that it shall not. A battle royal is in progress, Bryce and Buck having outwitted the Colonel by obtaining a franchise, the Colonel being the stronger, however, both in finances and because he is utterly unscrupulous.

Shirley fights fairly, and is just beginning to suspect her uncle's methods in protecting their joint interest. She has managed to maintain her friendship with Bryce and also with Moria MacTavish, his office aide, with whom redheaded Buck has fallen deliriously in love. Through Bryce, Shirley obtains a dictograph to overhear the secret conversation of her uncle and Mayor Poundstone.

Raise Your Chicks in Prairie State Brooders

Have your chick-raising equipment ready before the chicks arrive—avoid the risk of heavy loss. Whether you grow 25 chicks or 25,000 there are practical, dependable, efficient Prairie State Brooders which will exactly meet your needs. Oil-burning hovers and coal-burning stoves. Perfect in design—built on honor—tested and proved—preferred by successful poultry growers.

"Prairie State" means efficiency in incubators and brooders.

Among the Farmers

Northern New York and County Notes

OUT of 370 girls enrolled in junior extension work in Jefferson County, 315 attended Home Makers' Day at Watertown last week. This was declared by State leaders to be the first gathering of its kind ever held in the State.

The St. Lawrence County Farm Bureau is working hard to start the "accredited herd" work on a county-wide basis in the near future. Many of the members of the Board of Supervisors are personally behind the movement.

The Gouverneur Limestone Co. has just completed the installation of new equipment for grinding limestone for agricultural purposes. Many parts of these counties can greatly increase their production per man on the farms by using more lime.

Winter Long and Severe

Winter has been keeping up, and a blizzard twice in one week recently filled the roads as full as they have been at any time this winter, even the railroad having to operate plows to keep traffic moving. There has been a great deal of sickness during the last winter, whole families being ill at one time with gripe. With the growing scarcity of country doctors and the hard traveling, it has been a serious situation in many sections, cases being reported of one farmer on a road taking medicine from the doctor to the different families along the way, as the doctor could not get nearly around.

Maple men are getting ready for the tapping which experienced weather men say should come in two weeks, or about the 25th. Indications now are for a good flow. There is a division in the feelings of the men regarding the Maple Products Association. Some are not going to stick by, while others are planning to carry on to the last and put the association on its feet.

With a third of the milk poolers in Franklin, St. Lawrence, Lewis and Jefferson counties withdrawn, speculation is rife as to what developments the future will bring forth. The greater share of the withdrawals have come from cheese territory. The directors have expressed themselves as being somewhat surprised at the small numbers of Class I men who pulled out.

Plans to carry out a country theater at the county fair in September were discussed by the Jefferson County Pomona last week. A committee from the Grange and Home Bureau will complete arrangements in cooperation with the fair association officials. Local granges will put on exhibits at the fair this year for the second time.—W. I. R.

Lewis County Notes

The farmers in this section have been busily engaged in hauling home mill feeds, to tide them over the spell of bad roads that occurs every spring, when the frost is coming out of the ground, while others who have sugar bushes to tap are getting their utensils in order that they may be able to get the first run of sap, which is apt to come now most any time in this latitude. Everything points to a successful season for the sugar-makers this year. There is an abundance of frost in the ground, but, of course, it is rather early to predict with certainty as to what the season will be, as the weather we have after the season starts usually governs the amount of sap obtained.

Over 1,000 farmers here in Lewis and Jefferson counties cancelled their contracts with the Dairymen's League Cooperative Association during the period which closed on March 1. This will, of course, weaken their strength somewhat here in the North Country, but I understand the new contracts made during the past year almost equal the withdrawals, so they are not losing so much ground after all.

They don't appear to be having as many farmer meetings hereabouts as in other years and don't know why, unless the dairymen feel so sure of themselves that it is not necessary. The price of milk delivered at the Sheffield Farms plant located here is \$2.43 per hundred for March, which is the flat rate with the usual differentials for butterfat, which seems to be a fair price for this season of the year.

Hired help is now being engaged for

the coming season, and farmers are experiencing some difficulty in securing enough men to meet their needs, as the industries are all booming and offering higher wages than farmers can afford to pay.—CHARLES L. STILES.

Washington Co.—The farmers who have the help are cutting and marketing the wood, prices about \$8 a cord. No produce going to market. Very few potatoes in farmers' hands. Prospects for farmers getting help this coming season are very poor. Those willing to work on the farm are asking \$50 a month with board, room and washing. Many auctions are being held. Several farms will remain idle this coming season.—H. C. C.

The snow has been so deep that farmers have not been able to do much. Ice houses are well filled, but quality is poor. Saw mills are not running much, so it is almost impossible to get sawdust to cover the ice. Several farms have been sold for good prices. More would like to sell, but buyers are few. Farm help is almost out of reach. Hay, \$14 to 16; rye straw, \$20 to \$21; rye, 75c a bushel; oats, 70c; hay at auction, \$8 to \$12 in the barn. Horses are selling slowly. Cows from \$40 to \$90 at auction. Very little demand for young cattle.—F. P. P.

COUNTY NOTES

Schenectady Co.—The unusual amount of snow this winter has made it impossible for farmers to market much of their produce. Milk and mail carriers have had a hard time of it. Many farmers are complaining about low water in cisterns on account of so little thawing. There is but little frost in the ground. Eggs are bringing about 40c, butter is rather scarce bringing 50c at the stores. Not much sales for cows, especially old ones. Very few auction sales this winter.—S. W. C.

Cortland Co.—During the first week of March the weather was considerably milder than February's weather. However, farmers have not been able to get out a great deal, due to the extremely bad roads. The following prices prevail: potatoes, 50c a bushel; eggs, 38c; poultry, 25c; good maple wood sells fast at \$5 a cord. Farmers have completed their ice harvest—the quality was good.—G. A. B.

Ontario Co.—February was an old-fashioned winter month. The thermometer dropped below zero many times, even to-day some roads are filled with snow. The farmers are not very enthusiastic. The prices of farm produce are low, taxes are higher than ever and hired help is a serious problem. Many auctions are being held and property is selling low. Hay, \$16; potatoes, 45c; corn, 45c; butter, 40c; eggs, 38c; red marrow, kidney and pea beans, \$7 per cwt.; wheat, \$1.25; barley, 60c; buckwheat, \$1.50 a hundred.—E. P. BRIZZEE.

The Valley of the Giants

(Continued from page 322)

"Oh, the usual amount of wind, Colonel. Nobody knows what to make of that outfit."

Pennington studied the end of his cigar a moment. "Well, I don't know what to think of that project either," he admitted presently. "I've been waiting to see whether they will apply for a franchise to enter the city, but they seem to be taking their time."

"They certainly are a deliberate crowd," the Mayor murmured.

"Have they made any move to get a franchise?" Pennington asked bluntly. "If they have, you would be the first man to hear about it. I don't mean to be impertinent," he added with a gracious smile, "but the fact is I noticed that windbag Ogilvy entering your office the other afternoon, and I couldn't help wondering whether his visit was social or official."

"Social—so far as I could observe," Poundstone replied truthfully, wondering just how much Pennington knew.

Give a thought to Advertising

ONE criticism of the American Agriculturist made by members of the Journalism course at the State College of Agriculture at Cornell University, was that we ran too many small advertisements. In the opinion of these young men who are giving their time and study to advertising methods, small advertisements don't receive as much attention as large ones in proportion to their size. And they also believe that small advertisements clutter up the paper and make it hard reading.

We would like to know what our readers think about this subject. Do small advertisements have as much influence with you as large ones? Or a better way to judge would be: does a large advertisement have four times as much influence as one only one-quarter as large? And in your opinion do a lot of small advertisements make the paper hard to read, or do you enjoy them? Let us know what you think about it. Then we can make this paper reflect the wishes of a majority of its readers.

Also our advertisers will be interested to know what size advertisements you like and notice the most. Each advertiser has his own idea as to the best size to run. Some believe that a little advertisement, run every week, does more good than one four times as large run once a month. Other advertisers believe in large advertisements and never run small ones.

There's a lot to be said on both sides. Of course, a big ad is easier to see and read, though it costs more. But here is what one man writes about a small ad, a very small one—only one-half inch:

"Dear Sirs:—I had fine results from the free ad which you inserted in the Agriculturist.

"When I have more stock for sale I will remember what the free ad did for me."

And here's another letter from a firm that's been running a very small advertisement. They certainly got good results:

"Please discontinue my ad in your paper until further notice as I am getting *too many orders*."

So you see, the little advertisements certainly pay sometimes. Now, what do you think about them? Read all the advertisements in this issue carefully, compare them, and then let us know which in your opinion are the best—the big ones or the little ones?

* * * * *

Advertising has been called "Eye-Sight Salesmanship." That expresses the whole idea in a nut shell. For advertising sells products to peoples' eyes instead of to their ears the way a salesman does.

* * * * *

One hundred years ago, if a farmer in Syracuse had wanted to sell his products in New York City he would have to take them there himself. Which would have been a lot of trouble. Now all he has to do is put a little advertisement in a paper and wait for the New York man to come and get his products. That's the power of advertising.

And the more we think about it, the more we are convinced that it pays to give a thought to advertising.

Advertising Manager

Now Is the Time to Serve Eggs

A Variety of Recipes for Biddy's Contribution to the Spring Table

EGGS are dropping lower every day. The farmer's wife whose hens are working overtime would do well to divert some of the supply to her own table. Eggs are extremely nourishing, and the ways in which they may be prepared are legion. No need to say that anyone "gets tired" of them if these recipes are applied:

English Egg Pie

Cut into slices 6 hard-boiled eggs. Melt 2 tablespoons butter in a small stewpan, stir in a tablespoon of flour, then pour in half pint milk and let boil for 5 minutes, stirring all the time. Add a teaspoon of chopped parsley and salt and pepper to taste.

Fill a buttered baking dish with alternate layers of sliced eggs, white sauce, and bread crumbs covering the top with the sauce, bread crumbs and bits of butter. Bake 15 minutes.

Poached Eggs, Spanish Style

Break eggs and drop carefully into a shallow pan half filled with briskly boiling water, to which salt and a tablespoon of vinegar have been added. Cook slowly until eggs are set; remove each with a skimmer and arrange on a bed of rice seasoned with butter. Pour around the base a hot tomato sauce made as follows:

Cut up 3 slices bacon in saucepan, add small onion, chopped fine, and brown slightly. Then add 2 tablespoons flour, and a cup and a half tomatoes. Stir until thick. Season with half teaspoon of salt, a few gratings of nutmeg, a dash of cayenne, and a tablespoonful of chopped green peppers.

Eggs, Club Style

Break an egg into each tin of a well-greased muffin pan; cover the top of each egg with a thin shaving of onion, grated cheese, butter, paprika, salt and pepper. Bake in oven 15 or 20 minutes.

Cheese Souffle

Melt 2 tablespoons butter, add 3 tablespoons flour, and when well mixed pour in slowly half cup of milk. Add half tablespoon salt, a few grains of cayenne pepper, and cup of grated cheese. Remove from the fire and add beaten yolks of 3 eggs. Allow mixture to cool, then mix in 2 teaspoons of baking powder and well-beaten whites of 3 eggs; bake in buttered dish about 25 minutes in a slow oven. Serve immediately.

Puffy Omelet

To the yolks of 4 eggs add a half teaspoon salt, 2 teaspoons baking powder, 1 tablespoon corn starch, and a half cup of milk. Beat 4 egg whites until very light and mix thoroughly with yolks. Pour into well-greased, very hot frying pan and cook slowly until puffed up. Place in the oven for a minute or two, then fold and serve immediately. Jelly or preserved fruit may be folded in and the top sprinkled with powdered sugar.

Poached Eggs with Spinach

Arrange poached eggs on a mound of spinach which has been put through a sieve. Cover base with white sauce, as for the English Egg Pie. Garnish with triangles of toasted bread.

Scrambled Eggs with Dried Beef

Cover with cold water about one-fourth pound dried beef which has been shredded into small pieces and heat, but do not boil. Melt a tablespoon of butter in frying pan; mix drained beef with 3 eggs beaten with 3 tablespoons milk, and pour into hot frying pan. Cook over slow fire and as eggs begin to thicken stir until cooked.

A Hen's Nest

This is a favorite with all who try it. Six hard-boiled eggs, 1 cup cold chicken, ham or any meat; teaspoon chopped parsley; half teaspoon salt; dash of pepper. Separate the white and yolks—cut the whites into long strips, and set aside to warm in a slow oven, first dotting with butter. Mix the other ingredients, and make in small egg shapes. Heap in dish and arrange whites around them in imitation of a nest, and pour over all the following sauce; 3 tablespoons butter, 2 tablespoons flour; 1 cup milk; ¼ teaspoon

salt. Melt butter in top of double boiler, blend in flour, and when smooth add the milk, cooking until thick.

Omelet

Beat 4 eggs with 4 tablespoons milk or cream, add half teaspoon salt, pepper to taste. Melt tablespoon of butter in a hot frying pan, pour in mixture and cook slowly until set; lift the edges of omelet to allow the uncooked part to run underneath. When brown on the bottom fold in the ends so as to give the form of an oval cushion.

This plain omelet can be varied in infinite ways by the addition of other ingredients just before it is folded. For instance, the center may be filled with green peas, and a white sauce poured over the omelet. Finely cut beef, tongue, ham, cold slices of bacon, cheese, mushrooms, asparagus, tomato sauce, fried onions, oysters, chicken livers, minced chicken, sausage meat, mashed potatoes, olives, are all used. They may be mixed with the beaten eggs before cooking, or folded in the omelet after it is cooked.

Sponge Drops

Four eggs; half a cup powdered sugar; dash of salt; teaspoon flavoring; ¾ cups cake flour. Beat eggs until light and lemon colored, add sugar and salt, and flavoring, then gently roll in the flour, into which you have put ¼ teaspoon cream of tartar. Drop by spoonfuls in a cookie pan and sprinkle with powdered sugar. Bake in a slow oven.

Columbus Eggs

Peel the shells from a dozen hard-boiled eggs and cut each egg in two around the center, cutting off a little piece from each end, so they will stand on end, as did the famous egg which Columbus handled; pulverize the yolks and mix with finely minced chicken, ham or meat. Moisten with butter, and vinegar, salt, pepper, and a little mustard. Fill into empty whites, taking care to not break them. Press the two parts together and stand on a platter. The filling which remains over may be poured around the eggs, after mixing with thin mayonnaise.

THE HYACINTH'S COLLAR

"I'm disappointed in my hyacinths," said Mrs. New. "They cost enough to be pretty good, but see how the blossoms are starting to come out in a little, squatty ball, away down between the leaves!"

"Your hyacinth needed a collar to grow in," explained the neighbor. "May I use this stiff paper and a couple of pins?" Mrs. Frye deftly pinned the

paper into a cylinder slightly smaller in diameter than the flower pot. This she set down over the bulb.

"This hyacinth needs such a high-stand pipe because we didn't put one on sooner. Six inches tall is usually high enough. The paper makes the flower stalk reach up and discourages the top flowers from blooming too long before the rest. I am in the habit of putting a collar on my hyacinths at the time of bringing them out to the light," explained Mrs. Frye. "Most of them need to wear it only a little while then."

MAKING A BURLAP RUG

A combination rag and burlap rug, easy to make and effective, is described by Mrs. Katharine A. Dewey, an American Agriculturist reader, as follows:

"I washed a burlap sack, ripped out the seams and hemmed it. Then I cut rags into strips about an inch wide and sewed them end to end. Using the sack threads as the warp of the rug, I used a strong wire hairpin to weave my rags back and forth, drawing the rag under three threads of the sack at once so as to hold the rag firmly in place on the sack.

"One can make very pretty designs in this way, striped, hit or miss, or plain, with a pretty border. To make the rug different and still prettier, the sack can be dyed dark green, blue, or red. This rug takes far fewer rags than a crocheted or braided rug, and is much more quickly made."

A CROSS-STITCH CENTERPIECE

Everybody likes to do cross-stitch. It is so easy, works so quickly and the final result is sure to be effective.

Cross-stitch demands color and nowadays the brighter the color the better! Brilliant reds, blues and yellows, either used in one color or combined, are popular.

The centerpiece shown in the picture was designed especially for the readers of the magazines. The original, on tan linen, had blue cross-stitch and was finished with a deep hem caught up by very deep and widely separated scallop stitches. It may be finished instead with a rolled hem and lace. The centerpiece is twenty-four inches in diameter.

If you use white goods, softer colors might be prettier. Oyster white, with two shades of blue, is attractive; so is tan with red and black.

A transfer pattern of this original design will be sent on receipt of 12 cents in stamps. Ask for E7 and address your order to Handicraft Department.

E7.—Cross-stitch Centerpiece Transfer Design, 12c.

Deaf Can Hear Says Science

New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation.

They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitivity from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, Suite 1305, 220 W. 42d St., New York, for descriptive literature and request blank.

Wedding Anniversaries

Gladys S. Johnson Tells How to Celebrate Them

IT is becoming more and more customary to celebrate in an informal and amusing manner, anniversaries of the first wedded years. There is the cotton wedding, at the end of the first year, when the table is made gay with balls of cotton and little pickanninies scattered about, and pods of cotton hang from the chandelier. The second anniversary, which is the paper wedding, calls for a complete paper service at the table. Everything, except the knives and forks, can be obtained in paper, from paper plates, paper cups, paper spoons, paper doilies, and paper napkins to paper flowers for the decorations.

Likewise, in celebrating the fifth anniversary or wooden wedding, wooden plates, knives, forks, and spoons should be used. The centerpiece should be a large wooden mixing bowl filled with flowers. The tenth anniversary, the tin wedding, offers endless suggestions in the way of glittering tin table service. A large tin pan in the center and tin plates, tin spoons, and tin cups are but a few of the tin articles one can buy for a few cents.

Decorations that are Attractive

The crystal wedding, which comes at the end of fifteen years of married life, offers an opportunity for more beautiful decorations and appointments. As far as possible only glass should be used in serving the anniversary dinner. With the glass cooking utensils now on the market this should not be difficult. Glass candlesticks should be placed beside each plate and crystal beads festooned from the chandelier. A mirror with flowers banked about it would make a suitable centerpiece.

The china wedding, which marks the twentieth anniversary, can also be made a very decorative one by the use

of Chinese decorations. If possible, a Chinese dinner should be served as nearly as possible in the the Oriental manner. Chinese lanterns should be hung all about the room and flowers arranged in Chinese vases should carry out the scheme of decoration. The host and hostess in Chinese costumes should receive their guests with Oriental bows and suave courtesies.

SAVE CHICKEN FEATHERS

CLARICE RAYMOND

Before you scald that fowl for picking, just take the carving knife and unjoint the wings at the first joint. Then rub the "cut" ends in some live coals and ashes, doing it very quickly so as not to burn the feathers, and lay them on the stove shelf to dry. It will take them several days or perhaps a week to become thoroughly dry, so as not to be breeding moths.

These wings are very useful for many things. Dusting the stove, cleaning cupboard shelves, as one can fit them into the corners so nicely, also cleaning out the bureau drawers, box covers, trunks, the corners of the rooms—as most of us are not blessed with round-cornered rooms, although I recently saw a fine new house in which every room has "round corners." How happy that housewife must be with no corners to clean!

When you pick the fowl, consign all the bloody feathers, also the large ones and the pin-feathers, to the kitchen stove. The rest, wash clean, spread and dry, and you will have something to fill those coveted couch and chair cushions with. They also are good for filling pillows, and, if one has more than she can use, there is always a market for them.

EASY PATTERNS WHICH GIVE EXCELLENT RESULTS

VERY girlish is the effect of No. 1430, yet it is perfectly suitable for the older woman too. The original was made in gingham and organdie, but there are many pretty summer combinations that might be used. This dress was especially designed to stand many tubbings, and because it is cut in one piece, with set-in sleeves, it also irons easily. The double tie belts are very smart this year.

No. 1430 cuts in sizes 16 years, 36, 38, 40 and 42-bust measure. Size 36 requires 3 1/4 yards 36-inch material with 3/4 yard 36-inch contrasting. Price, 12c in stamps or coin (wrap coin carefully; stamps are safer).

AS a dress to wear to town or in the automobile, No. 1720 has obvious advantages. It may be made in tweed or other lightweight cloth, in cotton or in tub silk. The binding (or braid) and collar furnish the only trimming; the lines of the dress are simple and the style smart, but a bit severe. There is a choice of sleeves, as the material you use might influence your taste, and a jaunty little inset pocket on the right side, to balance the side closing on the left.

No. 1720 is cut in sizes 16 years, 36, 38, 40 and 42-inches bust measure. Size 36 requires 3 1/4 yards 36-inch material with 1/4 yard for collar and 3/4 yards binding. Price 12c. (Stamps preferred).

No. 1638 is another of the apron-dress or dress-apron type, brightened up in this case by a touch of embroidery. It is the popular one-piece style, the sleeves cut in one with the front and back. The sash ends, which are caught in with the underarm seams, continue around and tie at the back.

This style may be made in gingham, chambray or cretonne. The gayest possible colors are used both in materials and for embroidery these days.

No. 1638 cuts in sizes 34, 36, 38, 40, 42, 44 and 46-inch bust measure. Size 36 requires 3 1/2 yards 36-inch material, with 1/4 yard contrasting. Price, 12c. Transfer No. 602, blue only, 12c extra.

To Order: Write name, address, pattern numbers and sizes legibly, enclose amount and send to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York. You will probably want to add 10c for a copy of our spring Fashion Book, a catalogue crammed with smart designs, pictures of the dresses as they look when made up, style suggestions, embroidery ideas, and other useful information about the fashions.

Reviewing the Latest Eastern Markets and Prices

WHERE ARE ALL THOSE POTATOES?

HERSCHEL H. JONES

DEALERS and shippers have been puzzled by the surprising advance of wholesale prices for potatoes in the last month and the fairly steady market, in view of the official estimates given out last fall as to the enormous size of this year's crop. The question has been raised as to whether the estimates of the largest crop in years were accurate, and if so, what has become of all the potatoes?

The Federal Department of Agriculture has not seen fit to revise its crop estimates, but it gave out some information last week which was interpreted as follows by the New York State Department of Farms and Markets:

"With more potatoes grown last fall than ordinarily, there had deteriorated by March 1 approximately 40,000 carloads. Further shrinkage and loss will reduce the supplies of good No. 1 potatoes, but even if 90,000 carloads were available the daily shipments from March 1 to the end of June would have to average 750 cars to use all marketable stock. March shipments have averaged 700 cars a day, but the movement is gradually decreasing, and last week there were filled only 4,450 cars, or about 400 cars less than in the preceding week. In consequence of the reduction in acreage of early potatoes in Southern states and a reduction in intermediate sections, there may be a better opportunity for Northern growers and dealers to dispose of old potatoes. The delay of heavy movement from Florida until April 20 will also give an outlet for Northern stocks. Cold weather caused considerable damage to early potatoes."

Stocks of white potatoes in hand of growers and dealers on March 1, 1923, in 21 Northern states which produce about four-fifths of the crop of the entire United States are reported at 152,117,000 bushels, compared with 102,764,000 bushels on March 1, 1922. Stocks in these states on March 1 this year show 42.4 per cent remaining of the total production of 358,815,000 bushels in 1922, while stocks on March 1 last year represented 35.4 per cent remaining of the 1921 production of 290,285,000 bushels.

The total carlot shipments of potatoes up to March 25 were 206,661 cars, compared with 201,198 last season to date, and 238,285 for the entire last season. New York State's shipments, excluding Long Island, to March 25, were 9,519 cars, compared with 12,269 to same date last year.

POTATO MARKET UP AND DOWN

State potatoes in New York City markets reached \$3.75 to \$4 per 150-lb. sack last week. Shippers quoted up to \$3.50 per sack on carlots delivered. Buyers turned their attention to Western stock and bought 150-lb. sacks freely at \$2.40 to \$3.25.

Up-State growers sold some stock for \$1 per bu., but this price did not hold. When later in the week prices at New York dropped to \$2.50 to \$3 per sack, with only very few fancy, higher, loaders refused to pay over 60c per bu. At the end of the week, because of the Jewish holidays, buyers held off expecting heavy supplies and light demand.

Florida potatoes came in more freely and were sold at \$12 to \$15 per bbl.

RAW WOOL MORE ACTIVE

The quiet of the larger wool markets gave way in late March and early April to healthy trading, with buyers stating their needs more openly, better grades of wools changing hands at firm prices and the whole trade watching closely the trend of the contract business on raw fleeces in the country. The optimism was one concerning the strength of the market rather than over advance in prices, although the Boston wool market is several cents a pound higher on the best domestic grades than one month ago. Wage increases in several of the large woolen mills gave rise to the impression that the outlook would be good this season on manufactured wools, and foreign markets report a good business in wools ready for the mills. The Philadelphia market reacted more slowly, but later underwent the same improvement.

At Boston, Ohio and Pennsylvania unwashed fleeces, fine delaine, sold in late March at 56 to 58c per lb., 1/4-blood 50 @ 51c, 3/8-blood 52 @ 53c, 1/2-blood 55 @ 56c.

DRIED BEANS NO BETTER

The New York market for dried beans shows no improvement in spite of high prices at country points. The Michigan market last week was about \$7.60 to \$7.65, equivalent to about \$8.15 per 100-lb. bag on the dock at New York. Both State and Michigan choice pea beans were being sold, spot at New York, however, at \$8.40 to \$8.50, which would hardly cover cartage and other charges above the price given above.

State white kidneys were held in first hands at about \$9.75. In order to make a reasonable profit, dealers should get at least \$10.60 for white kidneys that cost them \$9.75 up-State, yet fanciest whites are selling here spot at \$9.75 per 100-lb. bag.

HAY MARKET GETTING FIRMER

Due to the refusal of the New York Central to issue permits for the shipment of hay during the last three

strong on account of the Easter trade, however. There was considerable accumulation of nearby white eggs, and the market weakened on the bulk of the nearby eggs received. Selected New Jersey hennerly whites were scarce and brought more than their usual

The market on intermediate and low grades was very unsatisfactory. The range of prices paid was wide and dealers were frequently confronted with the problem of sacrificing eggs of ordinary quality at below the market price, or holding them on an uncertain market that might decline rapidly. Many lots were cleaned up early last week at 28 to 30c per dozen, and only very fancy quality sold as high as 38 to 39c.

It is the general belief in the market that eggs will fall sharply after Easter, and that the large markets will be flooded in the next month. Monday and Friday last week the receipts at New York were over 236,000 cases, compared with 159,000 in the previous six days, and 138,000 cases in the corresponding period last year. Storage packed firsts are now selling at 27 to 27 1/2c per dozen at New York, with some good packs at 28c. The bulk of trade

proportion than usual of the stock is of fine quality.

DRESSED CALVES IN DEMAND

Receipts of country-dressed veal calves early in the week before Easter were moderate, and the demand for them was active, with a firm market until the end of the week, when receipts became much heavier. The proportion of really fancy heavy veals was very limited, and these often sold at a considerable premium over general quotations. Many shipments were made a little too late to get the best pre-Easter market.

Apparently dressed hot-house lambs were held back for the Easter trade, as supply was very limited until the middle of the week. The demand was active, and dealers had many orders to fill, so that the receipts were quickly absorbed and the market continued strong. First half of last week the sale price was \$12 to \$13 each, with some sales of selected fancy lambs at \$14 to \$15, and even up to \$17. The demand will be less active and prices lower when the Easter trade is supplied.

FEED PRICES BREAKING

The usual spring decline in feed prices was evident in the Buffalo wholesale feed market last week. Liberal offerings and slow demand brought down wholesale prices on all feeds except white hominy. Gluten feed dropped \$2 per ton. Quotations March 28 on carlots, Buffalo rate basis in 100-lb. sacks per ton, were:

Gluten feed, \$44.55; cottonseed meal, 36 per cent, \$45.75; oil meal, 31 per cent, \$39.50; standard spring bran, \$33.75; hard winter bran, \$34.25; standard spring middlings, \$33.75; choice flour middlings, \$35.25; white hominy, \$32.05; No. 2 yellow corn, per bushel, 85 1/2c; No. 2 white oats, 51 1/2; barley, feed, 72 @ 76c; No. 2 rye, 92c.

CASH GRAINS AT NEW YORK

The following were cash grain prices at New York March 30:

No. 2 red wheat, \$1.45 1/4; No. 2 hard winter, \$1.32 1/4; No. 2 mixed durum, \$1.22 3/4; No. 2 yellow corn, 93 3/4c; No. 2 mixed corn, 93 1/4c; No. 2 white oats, 56 @ 56 1/2c; rye, 92c; barley, \$1 @ 82c; buckwheat, \$1.86 1/2 @ 2.10. At Chicago: No. 2 yellow corn, 76c; No. 2 white oats, 45 1/4 @ 46c.

Hogs, Yorkers.....	9 @ 9 1/4	9

weeks, the arrivals at the 33d Street sheds were lighter, and the market tended to become considerably firmer toward the end of last week. The bad condition of the roads in the country is likely to prevent very heavy shipping in the next few weeks, and the stocks of hay on hand at various loading stations in New York at present are not heavy. Consequently, a better market is expected for the next week or so. River shipments by barge, which usually tend to bring the market down on ordinary grades of hay, will not be started until about the middle of April. Quotations are given in the box in the center of this page.

FANCY APPLES IN DEMAND

Barreled apples were in light supply last week, and there was a strong demand for fancy fruit. Much of the fruit, especially Greenings, showed scald from storage and were not desirable. Wholesale prices, March 29, per bbl., A grade, 2 1/2-inch, were as follows:

VARIETY	Best	Fancy	Ordinary
Baldwins	\$5.25 @ 5.50	\$5.75 @ 6	\$4.50 @ 4.75
Greenings	5.50 @ 5.75	6 @ 6.25	4.50 @ 5
Ben Davis	3.50 @ 3.75	4 @ 4.25	3 @ 3.25
N. Spy.	10 @ 11	12 @ 13	7 @ 8

At this time last year best Greenings sold at \$8.50 to \$10 per bbl., Baldwins \$7.50 to \$8, Northern Spys \$8 to \$9, Ben Davis \$6.50 to \$6.75.

EGG RECEIPTS HEAVY

In spite of the blizzards, egg shipments were heavier last week than in the corresponding weeks of 1922 and 1921, chiefly from the Middle West. The demand for fancy large eggs was very

in Western eggs, regular pack, last week, was within a range of 24 to 25 1/2c. The chain stores are offering guaranteed fresh eggs to consumers at 29c per dozen.

POULTRY MARKET ACTIVE

Express shipments of fowls sold at 30 to 34c lb. most of the week. Some White Leghorn fowls sold at 30c. Express shipments of broilers sold very readily at 75c each for colored and 70c for White Leghorn.

Capons, live, by freight, average run, sold at 35 to 40c lb. Ducks from Long Island, 35c lb.; from other nearby sections, 28 @ 30c; pigeons, per pair, live, 65c; rabbits, 32 @ 35c lb.

BUTTER MARKET UNCERTAIN

Although a high level of wholesale prices for butter continued last week, the general feeling was very nervous, due to anticipation of heavier supplies. A year ago fresh creamery extras were quoted at 37 to 37 1/2c, or 11 1/2 to 12c below the present wholesale rates. Part of the advance in prices is due to improved industrial conditions. Demand for immediate consumption very nearly balances the present receipts, but occasionally the desire on the part of buyers to secure their supplies ahead of time tends to stimulate a higher market than the general situation would seem to warrant. For this reason, the market has played back and forth between 49 and 51c per pound for fresh creamery extras for several weeks past. There is an unusually narrow range between the poorest and best grades of butter at present, due to the fact that a greater

HOUGH'S BABY CHICKS

WOLVERINE

The 1,000 Mile Shoe
Of Double-Tanned Horsehide

"I and some of my friends would like to get some of your Wolverine 1000 Mile Shoes, as the pair I got from you some time ago has given good satisfaction. There is no dealer here, so please send me pr. No. 10, pr. No. 9, pr. No. 8 and pr. No. 7."
(Signed)
F. M. TUTTLE,
Crichton, La.

The Planter

A double-tanned horsehide shoe, high enough to protect the ankles. Soft and easy on the feet, but a shoe that wears, and wears, and wears.

Ask for Stock Nos.
307, 308, 1058

Horsehide—Double Tanned That Always Stays Soft

We make a specialty of work shoes, made exclusively of double-tanned horsehide. Our double tanning process is an exclusive method of tanning this most durable leather so it always stays soft and pliable as buckskin.

Horsehide is known as the toughest of all leathers. It is the only leather used to cover league baseballs, because it is the only leather tough enough to stand the pounding. We double-tan it, increasing its durability yet making it so flexible that you can wear it all day, day after day, and it never tires your feet.

And it stays soft. Wet it, soak it, wear it through mud and water, it will dry out just as soft as when new. It never grows hard like other leathers.

We use only the choicest horsehides, and we use only the best part of each hide in making the Wolverine—the butts, where the

fibre is closest and toughest. Men who have worn Wolverine shoes say they never thought leather could last so long, or keep its softness after wetting.

You'll note how thick the leather is in Wolverine shoes. Then you'll marvel at its velvet-like flexibility. We make a Wolverine 1000 Mile Shoe for every work purpose. For field and factory, for oil field, camp or lumbering. And every shoe is horsehide through and

through.

You'll say, after wearing a pair of Wolverines, that this is the most economical shoe you ever bought. For it outlasts all other shoes, and it gives the satisfaction of perpetual comfort and ease.

If your dealer hasn't the Wolverine we will see that you are supplied through our nearest dealer. Write for our catalog.

Wolverine Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy. For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. You'll find it a blessing to the feet.

The TIRE that "eats up" hard work

Here's the tire for your small car—the tire with genuine life and fight in it—the kind of tire that simply "eats up" hard work. Buy this 30x3½ clincher fabric and it will wring every cent's worth of real tire service out of itself for you.

It's the biggest value, with the longest mileage at the lowest cost—you pay about half as much as such a tire cost in 1920. Thick, tough, anti-skid tread; heavy sides—made as only Goodrich makes a fabric tire. The fullest measure of quality and every inch of mileage it can hold.

Tell your dealer you want the Goodrich 55 Clincher Fabric Tire—he knows how good it is. He depends on Goodrich for quality just as you depend on him for satisfaction.

"And The Sower Went Forth To Sow"

The Passing of a Great Farm Industry—Ray F. Pollard

Is the American Home Slipping?

Something Is Needed to Dignify the World's Most Important Profession

By A MERE MAN

SOME foolhardy man writer with more courage than sense recently said that there is nothing that woman does that man cannot do better. I understand that when the indignant and expressive sex got through with that writer after his rash statement, he crawled into a hole and pulled the hole in after him.

I realize the chances I take in discussing women or any of their interests, but I have some rather emphatic views on the home, woman's place in it, and on the work which the Home Bureaus are doing, and in spite of the danger, I am going to discuss them. I shall at least avoid the likelihood of personal annihilation for my remarks by omitting to sign them. So here goes.

The home is the most important factor in the development of all that is good in human life. It is the fundamental unit of society and the foundation rock of every successful nation. The history shows that the downfall of each nation began with the lowering of the standards of its homes. Practically every effort in the world's history of communism has failed, no matter how high the ideals upon which it was started, because such efforts put the community life before the home life, or did not recognize the sanctity of the home at all.

A Distinct Tendency Downward

I am not a pessimist, but it seems to me that there is a distinct tendency downward in American homes to-day. Our modern life and civilization makes care most necessary to maintain the same high standards in our home life that our fathers had. This was once an agricultural nation, and the business of farming is tied up with the farm home. In the early days, and to some extent still, the farm people, who were a large part of the population, spent the long evenings reading gathered about the family hearth, or more correctly speaking, around the "settin'" room table. Most of the amusements were in the form of games played in the home among members of the same family or

in the social affairs of the neighborhood, usually in some neighbor's home. During the day, when not in school, the children were either in the presence of the mother in the house, or the older ones were associated most of the day with father in the farm work.

Especially important was the practical training that girls of former generations received in home making. Every kitchen was a laboratory where the girl, with the efficient mother as the teacher, learned to bake and sew and to care for a home and for the younger children.

An Idea that Should be Carried On

Best of all, the girl was constantly taught the idea that the greatest profession or career that she could possibly have was to help create another home in which she would be the moving spirit. But times change, and it is right that they should, if we prepare ourselves not only to enjoy the good things that come with progress, but to meet adequately its evils also.

In the majority of American families to-day the father is separated from his children all day, often leaving so early in the morning and returning so late at night that there is little opportunity for the mutual good that such association between father and children brings. More and more, even in the country, are the evenings spent outside of the home, not in the home of some neighbor, but with the automobile, at the motion pictures, or in some other form of amusement.

Particularly unfortunate, as I view it, is the fact that our girls are being educated away from the home. Too often now the modern mother washes the dishes herself while the daughter entertains company in the parlor. Thousands of young women come to the marriage altar with little or no practical knowledge of the essential things they should know.

The world demands of the young husband that he have money or trade or profession with which to support a family, but the world asks nothing of the bride in the way of training for the more important task of caring for that family. Is it any wonder that the courts are filled with divorces, when the young bride, educated all of her life with the thought that home making was not a profession or even a trade, but a menial task, and that a "career" was much more important, comes to her great responsibility trained neither materially nor spiritually to meet it?

How many, many times the young woman who was so set upon a career in her youth realizes with great bitterness, when too late, that she accepted the career in place of the greatest profession of all the world, and had indeed sold her birthright for a mess of pottage.

Some one has made the statement, somewhat exaggerated, that the dream of many modern young wives is to live in a 2 x 4 apartment over a delicatessen store with very handy transportation to the department stores and theaters. Contrast this, if you will, with the real home makers of past generations and you will agree, I think, that while there are millions of well managed, happy homes with high ideals, yet there are enough of the other kind, and their number is increasing, to give all thinking people grave concern.

The Factor of the Woman in Business

Another factor which modern life has brought about, is the millions of unmarried young women who are helping to do the world's work outside of the home, whose competition prevents millions of men from marrying, or at least makes an excuse for them not to marry. Most of these girls would marry if they got the right chance, but until the chance comes, if it ever does, most of them must earn their own living, although in doing so they are less

(Continued on page 345)

KNOW YOUR LEADERS

Sometime ago we published a picture of farm leaders and offered prizes for the largest list of correct names of the men in the picture. A very few were able to name only a part of the group. The women claim they can do better. Here is a picture of the leaders of Home Bureau work in New York State. To the person (not related to any in the group) who names the largest number of these women correctly, the New York State Federation of Home Bureaus will pay a prize of \$5. The second largest list will receive a prize of \$3, the third largest \$2. Where there is a tie, those involved will each receive the amount tied for. The contest closes May 15

The Passing of A Great Farm Industry

Hops Combined Speculation and Romance—Growers Glad To See Them Go

HOPS are on their last legs, or rather, on their last poles. In 1899 and 1909, Schoharie County had more acres of hops per square mile than any other county in New York State. Daily I now see deserted hop houses, stacks of idle poles, and hear stories in hop vernacular of the good old days. This county stuck to hops to the last and is still staying with 100 acres or less. Our German and Dutch blood makes us so perverse that we stayed strong in hops when nearly every other county in New York State saw the storm of competition, disease and prohibition coming and got out from under.

The First Planting

History records that the first yard was set by J. D. Coolidge at Madison, N. Y. in 1808. Growth was slow, however, and by 1840 there were hardly more than 2,000 acres of hops in the United States, of which two-thirds were in pious New England and the rest in New York State. By 1859 there were produced in the country 55,000 bales representing one-third as many acres, seven-eighths of them in New York State, with Vermont the only New England State to stay in the game.

Hop growing was contagious in New York. Sooner or later practically every county was exposed and by 1879 there were 39,072 acres of this crop in the State. At this same date Wisconsin had 4,439 acres and California was a poor third with 1,119 acres.

The Use of Hops

It has been stated on good authority that the manufacture of beer and ale required 95 per cent of the hop crop of the world. The same authority estimated that there were 264,500 acres of hops raised annually at the close of the nineteenth century. Assuming the average yield to be 650 pounds per acre, we find a world production of 171,925,000 pounds. Now take 95 per cent of this for the amount used in beer and ale, allow one and one-half pounds of hops to a barrel of beer, consider 250 "boot-legs" to the barrel, and we find that hops entered into 27,221,458,333 drinks for a beer-thirsty world.

There is no disputing the fact that hops and beer were two good cronies, neither happy or prosperous without the other. Other reasons besides the Volstead Act will be given for the fall of hops in New York State later in this article.

The remaining five per cent of hops were used for medicine, for decoctions, in yeast making, and even in the manufacture of

By RAY F. POLLARD

Bohemian glass. The roots were sometimes used as a substitute for sarsaparilla; the tender shoots were sometimes eaten like asparagus; the vine was said to make good paper pulp and even cloth, and if pressed fresh into stacks, would make ensilage.

The peak of the world's hop acreage is said to have been reached in 1894 when there were 272,865 acres and at the same time

economy could they produce for six cents. New York's decline started soon after 1879, and we must look back as far as that to find at least one cause. At that time Wisconsin had 4,439 acres and in the decade following, California, Oregon, and Washington came rapidly in with their thousands of acres. It was this competition from the Pacific coast where climate, soil and conditions were exceedingly favorable that first sounded the doom of New York's monopoly.

Insects and disease invaded New York first and even after reaching Washington and Oregon in 1888 and 1889 were not so destructive there as here. The "blue mold" or hop mildew, a fungous disease was probably the most destructive agent. Dusting the vines repeatedly with powdered sulphur was found to be effective and thousands of barrels were used for the purpose.

Insects Liked Hops

Of the insects the plant louse, said to cause "black mold" was most dreaded. This horde of suckers were combated by the use of kerosene emulsion and in later years by nicotine sprays. The hop grub injured the roots and tender sprouts, caterpillars fed on the leaves, as did the thrips and flea beetles. The "hop merchants" were most interesting chrysalids of two common butterflies. The superstition held among hop growers to the effect that when the gold spotted ones were plentiful the crop would be good, while if the silver spotted ones were plentiful and the gold spotted ones were scarce, the price would be low.

A Forerunner of the 18th Amendment

Local option had considerable to do with hop growing. As soon as they were given the right by law to prohibit the public sale of intoxicating liquors, many towns did so and remained "dry" from that time to this. A whack on beer produced a sympathetic black eye on hops.

Another cause of diminution in New York was the fact that there were hundreds of little growers with small "yards" on poor, hilly lands where comparative failure was rather quick and sure.

But the final knock-out blow was given by the 18th Amendment. The referee has been counting for several years now and is likely to count until he wears himself out before the one-time champion "the hop industry" with "beer" for his backer, will show any signs of life.

Hop picking time was the social event of the season in many localities. The old and

(Continued on page 347)

Hop picking time was something of a holiday in the heyday of the industry

63,777 acres in the United States according to the best estimates.

The peak of prices occurred in December, 1882, when hops were quoted in New York at \$1.13 per pound. That was the time when growers held for \$1.25 and \$2, and one man swore in half sincerity that he would get a cent apiece for his hops. Most of them got left. Last summer I visited the farm of a ruined hop grower, fields neglected and buildings falling down. He held 10,000 lbs. for \$1.25; later he used them to bed his livestock and fertilize the land. Another man was offered one dollar a pound and finally took ten cents. But the climax of foolishness was reached when a grower who couldn't get \$1.25 a pound, took his crop and scattered it on the public highway.

A Problem of To-Day as Well

Following high prices came an increased acreage with the result that the price was exceedingly low three years later in 1885. How many times have farmers had this lesson demonstrated with other crops like potatoes, and how many centuries will it be before a few of them commence to heed it?

The lowest recorded price for new hops was six cents per pound in August of 1879. Some farmers have said that in the days when labor was 75 cents per day and brimstone three-quarters of a cent a pound, they could produce hops for ten cents, but by no

Sapiro versus Carver

TWO men of much training, ability and experience are attracting national attention by their emphatic and wide-spread views upon the economics of agriculture, and especially by their radically different opinions as to the value of cooperation to the farmer.

Mr. Aaron Sapiro is America's most enthusiastic believer in cooperation. He travels up and down the land and by his great ability as a speaker and with an unlimited enthusiasm, he has started many sections and hundreds of communities in immense cooperative projects. He is a sincere apostle of a great cause, but because of his enthusiasm, too often, farmers are led to start their cooperative enterprises with too much hope that cooperation is immediately going to revolutionize their business and bring them prosperity.

If Mr. Sapiro could stay and continue to inject his wonderful personality and leadership into the organization, many of the things that he promises through cooperative effort would probably come true; but unfortunately, leaders with Sapiro's enthusiasm and ability are rare and after a time when the cooperative finds trouble along its way and fails to make good on the too great hopes upon which it was founded, its members become discouraged and critical. They forget the smaller and conservative results which it is really accomplishing and too often it goes the way of those hundreds of other enterprises, built too much on hope and not enough on sound business principle.

On the other hand, Professor Thomas N. Carver the Economist of Harvard is probably too conservative in his views of what can be done by cooperation. Mr. Sapiro and Professor Carver spoke recently from the same platform during Farmers' Week in Ohio. The Cleveland Plain Dealer said that Professor Carver "threw buckets and buckets of cold water" on the glowing enthusiasms aroused by Sapiro's remarkable address earlier in the week.

Carver said that cooperation will help clear special crops from regions that go strong on them, but will never touch nor

alter the immense established markets for such staples as wheat and cotton. "Cooperation like everything else needs a self-renewing motive. Enthusiasm dies out, but the desire for money never dies out. If an organization can make money, that perpetuates itself. If there is any money in cooperation, I am for it; if not, I don't take much interest in it."

Somewhere between the too enthusiastic Sapiro view and the too conservative Carver view on cooperation lies the "middle of the road." Organization of farmers will never bring any panacea. No farmer will get rich by it. But if it is founded upon good business methods and led by capable and honest men, farmers can hope to get by cooperation their just share of the true market returns for their products.

Lord Robert Cecil and the League of Nations

LORD ROBERT CECIL, England's chief exponent of the League of Nations, is visiting America to tell our people why he believes in the League, and to secure from them in return suggestions and criticisms which will help to perfect a great world organization, formed for the purpose of preventing war.

A dinner and reception were given to Lord Robert in New York City, where he made his opening speech in explanation of the League of Nations and answered questions in regard to it. This dinner was attended by bankers, lawyers, business men, clergymen, journalists and leaders of all sorts who gave the great English apostle of world peace the very closest of attention. Lord Robert was introduced by James G. McDonald who recently wrote the feature article in American Agriculturist, describing better than we have seen it anywhere else, the situation that exists in the Ruhr Valley in the present conflict between Germany and France. Because Lord Robert Cecil's speech is the clearest and best presentation of the principles upon which the League of Nations is founded, and because we believe our farm people are intensely interested in the great problem of preventing war, we expect to print as a feature article in our next issue much of what Lord Robert said.

More and more is it being brought home to all of us, as we struggle so hard to rectify what the war did, that some way or other we must do something to prevent war. There is no use to struggle forward for a century to make a little advance in civilization to have it all swept away by unnecessary conflicts between the nations. Maybe the League of Nations is not the way, but so far no one has come forward with a better plan. Perhaps if we cannot agree with all of the details of the League as explained by Lord Robert, we can, because of the great need, unite on the fundamental principles if they will prevent other catastrophes such as that started by Kaiser Wilhelm in 1914.

Farmers' Hours

IN an article entitled, "The Farmer and the Factory Hand" in the February issue of the "Atlantic Monthly," Arthur Pound has some interesting remarks on the hours that farmers work.

He says that farmers think because they start the day early and finish it late that they work more hours than any other class of workers. In their calculations, according to Mr. Pound, they fail to allow for the time between spells during the day that they don't work. To prove his point, Mr. Pound asked a farmer about farmers' hours, who answered him as follows:

"It depends upon how much land the man

has and what kind of a wife, and how much stock, etc. You can't lay down a rule that holds for all alike. But mine's about an average layout, and I put in—just figure it up for yourself—say two weeks at fourteen hours a day, and two more at twelve. Then two months at ten hours a day. That accounts for the three busy seasons, planting, haying and harvesting, and some over. Allow two months at eight hours and two more at six. There's more than seven months gone and winter left. Gosh, a fellow don't really put in more than four hours a day in winter choring around, if he really works at it. Of course, with nothing much to do, and plenty of time to do it in, he lays around and lingers on the job a good deal. Sundays the year around would rate about the same, four hours each. Then to play safe, better allow 100 hours for chopping winter firewood and 100 for repairing tools and buildings and odds and ends."

Mr. Pound goes on to say, "that averages just a little over seven hours a day the year around. The city man who works eight hours a day the year around, all but Sundays, comes close to matching the farmer."

The article as a whole speaks very kindly of farmers and perhaps the remarks about the actual hours that the farmer works is not far from right, although in these short help times, the farmer with a large dairy puts in a pretty full day in winter as well as in summer.

But what Mr. Pound fails to take into consideration is the fact that when the city man gets through with his job, he can forget it, while the farmer actually has responsibility for his work from the time he gets up in the morning until he goes to bed. Even when he has a holiday off, he must cut it short to "hurry home to milk the cows."

This whole question of the farmer's hours is a very interesting one and worth some discussion. How many hours do you actually work in the course of a year? How do your hours vary during the year? What kind of farming do you do? Have you ever considered methods for better regulation of your work to give you the same or better results and more freedom?

Getting Rid of a Load of Hay

"YESTERDAY," said a farmer recently to a friend, "I took a load of hay to town and got rid of it."

In that expression, the farmer unconsciously showed one big reason why farmers get so little for their products. His whole psychology toward that load of hay and its sale was entirely wrong. With him the hay was something of little value to get rid of, instead of a possession much to be desired, to be parted from only when properly sold.

The idea is general on the part of both farmers and dealers that the dealer confers a great favor on the farmer for taking the farmer's products off his hands at any old price, but you can bet the farmer is not made to feel that he is conferring any favor on the dealer when he buys his farm equipment and supplies. It is an absurd situation that the farmer takes for most of his products the prices that the other fellow is willing to give, and pays for his supplies the price that the other fellow names, but for this situation, farmers themselves are chiefly to blame. How can we expect others to value what we hold of little account?

Products which the farmer raise are the most desirable and most necessary in the world. If it were not for these products, the world would starve. The first step in marketing is to recognize the value of and have some confidence in what we have for sale.

"All great nations fail when their agriculture fails."—THEODORE ROOSEVELT.

“What Hath God Wrought?”

Radio—The Latest Phenomenon for Reducing The Curse of Farm Isolation

I HAVE often thought what fun it would be to bring a Yankee farmer who lived, say one-hundred years ago, back to earth and take a four weeks' vacation to show him the sights. We who are privileged to live in this age are so used to the thousands of inventions which help to make modern life of interest and worth while that we do not realize what a most wonderful age it is. But you can be assured that our farmer, brought to life again after a brief hundred years' rest, would think that he had either gone crazy, or that all moderns had. Can you imagine his face, for instance, when he saw for the first time a railroad locomotive and train, or when you tried to get him to ride on one of the strange contraptions? Bear in mind that it was less than one-hundred years ago when the first locomotive made its trial run. What would he think when we showed him the modern city with its great buildings, its manufactories, department stores, and all the electrical devices that have come since Benjamin Franklin sent up his kite with a key attached?

What would the Yankee farmer say, too, when we took him to the farm and showed him the grain binder, the milking machine, the automobile, the rural-mail delivery, the telephone, and the hundred other mechanical devices that have changed farming from the menial drudgery and lonesome isolation of his day to the interesting and worth-while business of ours? Comparatively speaking, it is only a short time since 1844 when Samuel Morse, ticked that first message by telegraph, “What hath God Wrought?” which marked the beginning of a new day in long-distance communication.

“What hath God Wrought?”—Those are the words and the sentiment that come to me to-night as this talk is broadcast into the air and carried by radio to thousands of my friends whose farm homes dot the hills and valleys of what was, before the day of modern invention, a lonesome and isolated countryside.

With the possible exception of poverty, the greatest curse of farm life has been isolation. The bitter tears of loneliness that have been shed by farm women shut off by bad roads and long winters from nearly all social intercourse with the outside world, have been nothing less than tragedy. Isolation also is largely to blame for the fact that the farmer, while a good producer, has been a poor seller. Until recently he has had no means of knowing market conditions nor how to meet them, and his isolation has made it difficult to co-operate with his neighbor. The R. F. D., the automobile, good roads, the telephone and now this last great invention, the radio, are bringing about a new day in the farmer's social and economic life, and are bringing to country homes nearly all of the advantages of social and economic intercourse that city folks have, with few of the disadvantages of city life.

The radio is just in its infancy,

but it is already developed far enough to give promise of doing more even than anything else, which we yet have to reduce the farmer's isolation, to put him in daily touch with his markets and with all important news, and to bring to him all that is best in art, literature and music of the present day.

of communication can be made of the most value to you. This is the first effort that has been made in New York State to give farmers a service of this kind.

The American Agriculturist radio program will include the broadcasting of the latest news of greatest interest to farmers, this news to be written and interpreted entirely from the farmer's standpoint.

For instance, Lord Robert Cecil, England's best exponent of the League of Nations, is visiting America to tell our people why he believes in the League, and to secure from them in return suggestions and criticisms which will help to perfect a great world organization, formed for the purpose of preventing war. Lord Robert's speech is the clearest and the best presentation of the principles upon which the League of Nations is founded. Farm people are intensely interested in the great problem of preventing war; therefore, I think it the

duty of a farm paper and of the radio broadcasting stations to explain and emphasize such important news topics as Lord Robert's visit, and to explain what the principles he advocates might mean to farm people and to the world in general. Perhaps if we cannot agree with all of the details of the League, we can unite on the fundamental principles that will help to prevent other catastrophes such as that started by Kaiser Wilhelm in 1914.

This afternoon at Albany, a great hearing was held by the Joint Educational Committee in the Legislature on the Rural School Bill, which contains the suggestions of the Committee of Twenty-one. This committee has been working for three years to get suggestions for improvement of our rural schools. Whether or not this bill will pass this year is problematical, but because of the great need of the country children for the application of the main principle in this bill, it is very sure to pass this year or next.

The San Jose Scale, a pest which attacks apple and other fruit trees, is again becoming rampant in eastern orchards. A few years ago this scale became a serious menace to the fruit producing business. Thorough spraying with lime sulphur solution held it in check. Such spraying should again be resumed and it is now time to do it. I mention these three different items, general news about the League of Nations, the farm news on the Rural School Bill and the San Jose Scale, to illustrate what I mean of using the farm press and the radio to express and interpret the news from the farmer's standpoint.

Would such a service be valuable to you? Our suggested agricultural radio program for the coming weeks also includes short addresses every Wednesday evening at 7:30, by some of the greatest farm leaders in the United States. The first of these will be an address by Professor George F. Warren of the New York State

(Continued on page 338)

Our Radio Service

ON Wednesday, April 11, at 7:30 P. M., the address given on this page by E. R. Eastman, editor of American Agriculturist, was broadcast by radio from the WEA station of the American Telephone and Telegraph Company. Whether you own a radio or not, you probably will sometime own one, and you will be interested in Mr. Eastman's outline of the special radio service which the American Agriculturist is furnishing to farmers through the cooperation of the American Telephone Company.

We are especially interested to have your written suggestions for making the radio of more service to farmers. Therefore, if you have a radio, will you cooperate by answering the questions suggested by Mr. Eastman on this page; and if you do not own a radio, will you call these questions to the attention of some friend who does have one? The time is coming when you will use this great invention as much as you do the telephone now, or more, and in this development that is sure to come, you can have an important part in making it especially useful to farmers by cooperating with us and the broadcasting station in developing a real farm-radio service.

Because Henry Morgenthau, Jr., the publisher of the American Agriculturist, and I believe this so thoroughly, and because we can see the radio has even greater possibilities for farm people, because of their situation and business than anyone else, we have arranged to cooperate for a time at least with the American Telephone and Telegraph Company, through this station, WEA, to give you a special farmer's radio service, and try to find out from you how this means

Safe-guard your Fertilizer Investment

by using your Cooperative G. L. F. Exchange
to buy your Fertilizer for you

Prof. E. L. Worthen of Cornell says—

"I am convinced that the G. L. F. Exchange has developed a most progressive fertilizer program. It offers a service which New York farmers should appreciate. It should enable them to readily secure the necessary fertilizer or fertilizing material to follow the recommendations of the College of Agriculture. It is indeed a service long needed by New York farmers."

GLF FERTILIZERS

Dependable Quality

High Analysis Mixed Fertilizers

—your best investment when buying mixed goods. Don't use low analysis formulas. Apply less high analysis goods per acre—get the same plant food and save money.

Dependable Acid Phosphate

—Guaranteed 16% available Phosphoric Acid, thoroughly cured, milled and screened. Made from the best quality Phosphate Rock and clear Sulphuric Acid. No sludge acid used.

Raw Materials

—for shipment in straight, assorted or less than carload lots. The G. L. F. offers you especially attractive prices on less than carload shipments.

Order through your G. L. F. Agent—Write for details

The Cooperative Grange League Federation Exchange, Inc.

Dept. H, Byrne Bldg., Syracuse, N. Y.

"I always graded my potatoes by hand until a friend told me about the Boggs Potato and Onion Grader. On his recommendation I bought one and in three seasons it made enough extra money to buy that piece of ground over there."

Many a grower has been able to make such a statement after putting a Boggs on the job.

In one operation the Boggs eliminates culls and dirt, and grades No. 1 and No. 2 Government sizes with less than 3% variation. Commission men gladly pay 25c to 50c more per bag for Boggs-graded potatoes because they run true to size and therefore net them bigger profits.

The Boggs also saves you money by cutting down labor costs—does the manual labor of from 3 to 5 men. Won't bruise or injure potatoes. Operated by hand, motor or engine. Six models, \$40 and up. Handles 75 to 700 bushels per hour, according to size.

Write at once for interesting Booklet.

As I View Long Island

Last Week, Its Farming—This Week, Its Farmers

I LIKE the enthusiasm of the local pride and patriotism which leads the Long Islander to call his land the "Blessed Isle," and the man from Suffolk County (stretching as it does more than a hundred miles east of any other part of our State) to christen it "The Sunrise County."

J. VAN WAGENEN, JR.

We do well when we learn to call the Home Spot "God's Country." Long Island is quite a patch of land, anyway. It is about 130 miles from the old Brooklyn Bridge to the tip of "Montauk's eastward-pointing finger," and it is about 30 miles across at the widest point. At the western end is a roaring city of docks, factories and closely built streets of old Brooklyn. Then eastward is the commuter's zone. This is the region which every morning sends a swirling flood of humanity through the tube and over the bridges and on the ferries into New York City, and every evening sucks them back again to itself. Long ago Brooklyn was called not only "The City of Churches," but the "Bedroom of New York" as well. Then up on the "North Shore" and in the Wheatly Hills region and way out around Southampton—the "Newport of Long Island"—are the imposing estates—the homes, or, more correctly, the occasional, sojourning places of the very rich.

The Indian Still Remains

At the eastern end is the Shinnecock Indian Reservation, where a pitiful remnant of the Shinnecock tribe still holds the land. The Reservation, if it could be opened up, would be exceedingly valuable, and white men have long coveted this particular domain, but after many efforts to dispossess him, Poor Lo still maintains his ancient sovereignty. I am glad, because it shows that whatever injustices were committed in the past, the State now means to deal fairly with its Indian wards.

Of course, an island like this, with its long coast line, can never be without something of the romance and the flavor of the sea. Sag Harbor, out toward the eastern end, once rivaled New Bedford as a whaling port, and her hardy captains sailed outward bound on cruises that were expected to be full three years long, and no waters were too remote and no climates too rigorous for these sturdy adventurers of the seas. Those were proud and palmy days such as can never be again, for one August day in 1859, at Titusville, Pa., a man drilling for salt opened a leaping fountain of oil. It was the beginning of the end of the whaler's day, and now a once great and prosperous industry lives only in the halcyon memories of ancient, grizzled men haunting rotting wharfs and rehearsing yet once again to each other the epic stories of those noble years. These gray beards are the last of the most undaunted breed of men that ever went down to the sea in ships.

A Sea Coast Country

A sea coast country is always a well-fed lot of folk, for there are cod and sea bass out in the open main and flounders and weakfish in the bays, and oysters in the inlets, and clams on every protected beach, and, best of all, there are scallops in Great Peconic Bay, and these are a delicacy so delectable that to eat of them fresh from the water that morning, and fried in deep fat to a golden brown—this is to know the last and the best that Epicurus ever dreamed.

I believe it was Alexander Pope who wrote that "the proper study for Mankind is Man," and I have always found that the most interesting feature of any locality is not the soils, or crops, or climate, or agricultural methods, but

rather the farm people themselves. Now, when you come to speak of the Native Sons of the Island, you need make no apologies. Perhaps it is not generally realized that the oldest English-speaking settlement in New York State was on Long Island, made by Connecticut Yankees who migrated across the Sound about 1640, coming first to Southold, on the North Shore, but soon setting up their homes at Southampton, on the other side of the Island. These early settlers were, of course, of purest English blood, and they brought with them the Puritans' stern code of morals and the Puritans' meeting house, which in due time became the Congregational church. Most of the old families send their ancestral roots back to this fine stock.

Famous "Sound Avenue"

SOUND AVENUE is the name of a region rather than a place, but I judge the community center is north of Riverhead, around the Grange Hall, and the beautiful country church and the very modern rural schoolhouse. Sound Avenue is also the name of a long, beckoning road which follows the north side of the Island for many miles, keeping about a mile from the water front, and all the farmsteads are on this road, and all the farms run back to the waters of the Sound—at this point so wide that Connecticut is little more than a blur on the horizon. Once these farms were large, but as it became necessary to provide a heritage for the numerous sons who would farm, they have been much subdivided. After all, large acreage is less important than in most sections, because 40 acres is a lot of land when devoted to intensive crops, and is really a bigger farming proposition than 200 acres devoted to general farming. The old plan of letting every farm run back to salt water still prevails, so that there are some singularly long, narrow, shoe-string farms. This has resulted in a country road which, on the north side at least, is more like a scattered village street. So, too, a dense rural population and a prosperous agriculture has permitted the development of a splendid type of rural civilization. For example, it is quite unusual to find a large pipe-organ in an open country church, but there is one in the Sound Avenue Church, and it is good to know that, unlike many country churches, they have retained the same pastor through many years.

Typifies Rural Life at its Best

SOUND AVENUE has long stood out in my thought as typifying rural life at its best—an ancient, pure American community, with fine traditions—agriculturally prosperous, so that their children have gone away to school and college, and they themselves have maintained contact with the world through books and travel.

I had expected that some day the ever-widening zone of suburban New York would engulf them and drive them from their pleasant farms. As a matter of fact, the city influence never seems to have greatly influenced the eastern portion of the northern shore.

Social disaster threatens Sound Avenue, but not from this source. Rather it is the coming of the Pole, who is establishing himself on these old farms in large numbers. He is doing it very simply and directly by purchasing the land at high prices. For the first time in its history, Sound Avenue must propound this far-reaching question, "Shall the agricultural civilization of this community be the civilization of the Puritan, or the civilization of the Slav?" I hope—oh, I hope—that somehow the Yankee will find ways to hold the fort. Understand me, agriculture, as measured in terms of production, will not suffer. What the emigrant lacks in book knowledge and hereditary skill he amply atones for by his willingness to accept a low standard of living and his ability to work himself and his women folks and his young children pitilessly without regard to the calendar or hours. Hewers of wood and drawers of water they may be, but no man can compete against them. It is not potatoes and cauliflower—it is

our ethical and cultural standards that are at stake.

It has been my good fortune at various times to come to know, in a rather intimate way, some members of the Society of Friends, and I admire them and their philosophy more than I can well tell. I remember how, at Mineola, I once met a gentle-voiced, cultured Friend who spoke of his history and told me of his problems. Quietly, unemotionally, as one who states a simple truth, he said: "For two hundred years and more my people have lived on this farm, and on it we have found happiness and satisfaction and content—but the end comes. The ever-spreading city has practically surrounded and submerged me. On every side is a civilization and standards and culture that has no understanding of or sympathy with me or mine. The real estate men are impatiently clamoring for my land, and they call me 'fool' because I still hold these open fields. The great estates covet my acreage. I could sell tomorrow for a thousand dollars for every acre—perhaps more. 'I have kept the faith,' but my boy will never till these fields as his fathers did, and the end comes quickly. I do not know what I ought to do."

I answered him: "Sir, I salute you. You are the last of a line of kings."

Thus through all the turmoil of our modern civilization, the Mills of the Gods grind—sometimes good—sometimes ill.

THE ORIGIN AND DEVELOPMENT OF GRIMM ALFALFA

A. L. BIBBINS

For years farmers of Carver County, Minnesota, had attempted to grow alfalfa, but were unable to make it last through the winter. Wendlyn Grimm, an old German farmer of that county, observed a few plants that survived the normal winter conditions. Mr. Grimm selected seed from these plants and started the propagation of the variety that bears his name and which has brought millions of dollars to farmers in North America.

It required 10 years to produce the first eight bushels of seed. His neighbors were trying out the variety in small amounts and found that it was especially hardy and could be depended upon to produce good crops of hay. Farmers in the region of Fargo, North Dakota, where previously it has been impossible to grow alfalfa successfully, were soon receiving the same results as experienced by the Carver County men. Soon it spread into South Dakota and the hill lands of Idaho. It is now grown for seed in Kansas, Nebraska and Colorado.

It has taken a great many years to prove the value of Grimm alfalfa. Farmers of the northwest are well convinced on this point and a great many leading men of Wisconsin, Michigan and New York, have proved the superiority of Grimm over common. Unfortunately many have failed from the use of so-called Grimm. These failures have discouraged the growing of Grimm as well as the growing of alfalfa in some sections, but to-day farmers are finding that when they get the real Grimm that the battle is more than half won. This means a great deal to our agriculture. In Michigan the acreage has increased from 78,000 to over 500,000 in the last four years largely due to the use of reliable Grimm seed.

This year there is more than usual interest in alfalfa in New York, resulting in considerable demand for Grimm. A temptation on the part of some western farmers as well as some seedsmen to misrepresent their alfalfa has placed upon the market a great deal more seed in the name of Grimm than is actually produced. That has been the experience of western farmers and seedsmen for a long time. Such a condition is deplorable, but must be met by the eastern farmers insisting upon the fullest facts and knowledge concerning the seed that he is using. Through the process of field inspection and obtaining the seed at the production points, it is possible to purchase Grimm seed that comes from the original seed and is free from all mixtures and adulterations of common. That is the kind of seed that is making alfalfa growing more desirable, especially in those territories where the stands are subject to hard winter and spring conditions.

General Motors Trucks

GMC Trucks are "Seven Steps Ahead"

Better Transportation of Farm Products

No matter where a GMC truck is used on the farm, it will provide the finest kind of economical truck transportation.

For GMC trucks are built as real motor trucks should be—from truck units only—no passenger car parts used.

Electric lights with generator and battery, starting equipment on model K16 and provision for starting motor on larger models, complete instrument case at the hand of the driver, large steering wheel, hand and foot throttle control, long gear shift, and brake levers—all make driving safe and comfortable by day or by night.

The features of GMC construction, such as removable cylinder walls, removable valve lifter

assemblies, GMC pressure lubrication, positive instantaneous governor, interchangeable brake rods and many others provide new economies of operation and upkeep.

In addition, in all GMC trucks of two tons and greater capacity, the now famous GMC Two-Range Transmission provides a new and revolutionary combination of speed and pulling power, not provided in other trucks.

Whether you select the speedy, powerful "Jim Dandy" one-ton GMC or a larger model, you will find it affords a better and newer kind of haulage.

Ask for booklet "Motor Trucks On The Farm."

Circulation Manager

461 Fourth Avenue, New York City

For Every Kind of Spraying

This handy sprayer fills the bill—sprays fruit trees, gardens, flowers, shrubs, vegetables, grapes, berries. For whitewashing poultry houses, cellars, fence posts, and trees—for spraying disinfectant, fly spray, carbolic in poultry houses and stables—for washing windows, automobiles and buggies.

SMITH BANNER
No. 22
COMPRESSED AIR SPRAYER

is made right—strong, efficient and handy—designed to do the work as it should be done. No effort at all to use it. A few strokes of the pump compresses air to discharge contents of the tank—carried on shoulder strap or by handle—handy nozzle, opens and cuts off instantly—throws long distance fine mist or coarse spray.

Ask your dealer to show you this sprayer—examine it—you will be surprised that it can be sold at so low a price—Don't accept a substitute—there are imitations but only one No. 22 Banner—insist on getting the best—most hardware and implement dealers carry them—if yours does not, write us and we will see that you are supplied. Send for free catalog of complete line.

In the Garden Vineyard

Varieties and Cultural Practices for the Small Grower

By L. G. YOUNGS

THE first consideration in planting a garden vineyard is that of varieties, so that the wants of the household may be satisfied. A garden vineyard is of little service if the varieties are such that the fruit ripens all at one time. The sorts must be selected so that they will cover the entire season. Under our conditions in the Lake Erie section, we can make plantings for early fruiting varieties from the Red Moyer, Moore's Early, Black Worden, Diamond or Lady Washington, while Concord, Delaware and Niagara come for the middle of the season. Catawba, Agawam or some of Rodger's Hybrids will round out the season as good late sorts.

This list is merely suggestive, and there are many others in favor. While some have merit, there is not one in 20 of the new varieties being introduced which shows improvement over our present list. However, the amateur grape grower can satisfy his curiosity by experiment-

ing, and, if done in a small way, the expense will be insignificant. If the garden vineyardist will make the bulk of his plantings of tested varieties he will be quite sure of average, moderate success in his work. If the locality is subject to severe frost, it is advisable to locate the vineyard on the highest available ground on the farm, as frost will be less liable to cause damage, and grapes seem to naturally thrive best on high levels.

It has been my experience that the best grade one-year vines are preferable, and commercial grape men seem to make this preference. Some growers are not willing to wait, and hope to hasten the fruiting of their varieties by purchasing two-year vines. It has been our experience that the one-year vines, when purchased, should be cut back to an 8 or a 10-inch root and trimmed to two buds. Growth can be hastened by use of a commercial fertilizer applied after the roots have been well covered with soil. The earth prevents any burning action of the fertilizer.

It is best to plant the garden vineyard on much the same lines as the large vineyard. The 10 x 10-foot and 9 x 9-foot spacing of vineyards is now obsolete, and spacing of 9 x 8, 9 x 7, or 9 x 6 feet is followed mostly for the strong growing varieties like the Concord. A few vineyardists out here follow the 8-foot spacing of the rows for the Delaware and weaker growing varieties, but the method is not satisfactory either for hauling out the grapes or for plowing and cultivating.

Setting out the Vines

THERE is a tendency right now toward closer planting in the setting of vineyards, but as less wood is put up, the aggregate of buds is about the same per acre. Vineyardists formerly desired the vines to have 45 to 60 or more buds, but now 25 to 35 buds is generally the rule. The decrease in buds gives larger berries and better shouldered fruit.

There are various systems of training vines, the general purpose of all of which is the renewal of the fruiting wood. The one big fact which the garden vineyardists should grasp is that the grapes are not grown on old wood, but on wood of the previous season's growth. The first season for planting we cut back the vines to three buds, and from the three canes which grow we save the two best ones to carry to the trellis. The support, or trellis, is made by setting stakes at a distance of three vines apart. A post and brace is used at either end of the vineyard row, and the stakes at every three vines are wired to them.

If the growth of the vines is not satisfactory at the end of the second year after planting, the wood is cut back in the same way as in the first year after planting, and this process may be followed throughout the vineyard until satisfactory. In most cases we bring two canes up to the bottom wire and tie them at right angles along the bottom wire, or else they are carried to the top wire and tied along that. We use a No. 20 vine wire in tying the canes on the top wire. The tie on the bottom wire is made with a 4-ply twine and is loose enough so that the cane will not girdle.

A Danger in Tying

WE have found that when wire is used to make the tying upon the bottom wire, the cane is often girdled, and so we have discontinued that practice. Some growers in our section only bring up one cane at first to either the bottom or to the top wires.

In the arm system, the cane is trained to two arms on the bottom wire at right angles to the main cane. Three to five laterals are brought up from the arms and tied to the top wire for the fruiting wood. Under the Kniffen system as formerly practiced, two laterals were trained

over the bottom wire and two over the top wire at right angles to the parent cane. The modification of this system is to carry the vine to the top wire and tie the fruit wood down to the bottom wire. We have found that when this system is followed there will be less trouble from the wind blowing down the canes from the trellis.

A word about the trellis: The first wire of this is stapled to the post and spaced 30 to 36 inches from the ground. The second, or top wire, is stapled 24 inches above the bottom wire. A few vineyardists have used a third wire, but it has been very generally discontinued in recent plantings.

Spraying

GRAPES need to be sprayed when rot, mildew or anthracnose are prevalent, with Bordeaux mixture, applied at the rate of 100 gallons to the acre. This is put on immediately after the grapes have blossomed. In fact, it is well to spray at this time, as a general insurance against fungous troubles. If the grape root-worm or the grape berry-moth are present, add five or six pounds arsenate of lead to the Bordeaux mixture, and repeat the spraying in two weeks.

If thrip or leaf hopper are in the vineyard, it is best to use a nicotine spray to control them. This may be combined with the arsenate of lead. The nozzles of the spray rod should be so that the fine spray is thrown upward upon the underside of the leaves. Fine holes in the nozzles give best results, particularly when combating the thrip, for nicotine is a contact spray and should be applied as a mist to prevent the pest.

TREATING OATS FOR SMUT

In last week's issue there appeared a stenographic error on page 309 in the recommendations for diluting formaldehyde in the treatment of oats for smut. Instead of a quart of formaldehyde in 40 quarts of water, the directions should read one pound of formaldehyde in 40 quarts of water. After the seed has been run through the mill, the smut balls and light grain should be piled on a tight, clean floor and covered with the diluted formaldehyde. The pile is turned over three times during the day. The grain is moist-

Legumes for Acid Soils

Some Do Well, Nothing Beats Lime and Red Clover

THE high price of lime in the past few years has led to some discussion of the subject of acid soil legumes; but as Mark Twain said of the weather, not much has been done about it. Moreover, with the gradual lowering in the cost of lime it is probable that the old stand-bys, red clover and alfalfa, will continue to hold their own.

It is interesting, however, to inquire briefly into this question of acid soil legumes, that is, leguminous plants which thrive on a soil which has an acid reaction and which has not been limed for years.

I wish to make this last statement entirely clear, since experiments have recently shown that red clover will thrive in a soil showing somewhat of an acid reaction but which has been recently limed; even though the lime requirement has not been satisfied, red clover will thrive if there is "free lime" in the soil. Experiments at the New Jersey Station on a soil with a lime requirement of 2,000 pounds of ground limestone, showed that through a period of years for all the crops in the rotation, practically as large yields were obtained with 1,000 pounds of ground limestone as with 2,000 pounds. It is probable that on most soils 2,000 pounds of ground limestone, or its equivalent in other forms of

lime, is amply sufficient for success with red clover. Even at present prices for lime this would not involve a very large cash expenditure.

Further, there is no legume which fits into the general northern rotation as satisfactorily as red clover. It would seem that it is worth spending a little extra money to insure success with this time-honored legume. Alsike will, of course, do better than red clover on land of medium acidity which has not been recently limed, but no one questions the superiority of red clover where the two grow equally well. Still, alsike has won a place for itself on account of its acid resistance, and where the soil has not been recently limed it is highly desirable to include it in the mixture to displace, partly or wholly, the red clover.

Getting away from the strictly northern rotation, we find certain legumes which are more or less acid resistant, some of which are valuable, others worthy of trial in certain localities, and still others of very doubtful value. We regard cowpeas as being somewhat acid resistant. This crop has found a place in southern New Jersey primarily for soil improvement. It will often make a satisfactory growth on land that is fairly low in productivity and which has not been limed for many years.

Lespedeza is an annual plant which is distinctly acid resistant and which seems to give some promise for South Jersey and localities further south. Its place in South Jersey is as a pasture crop and a soil improvement crop. Besides the common Japan clover we are trying out a related species known as Korean lespedeza. The latter is a shorter season plant than the former and, from a limited experience of one year, it looks more promising than the former. Dr. A. J. Pieters of the U. S. Department of Agriculture suggests that the two species be seeded in combination

By HERBERT R. COX

to lengthen the pasturing season and make reseeding more sure. Certain it is that lespedeza will make some growth on poor soil which has never been treated with lime, fertilizer or manure; the principal question is whether the crop will make enough growth to be worth while.

Kudzu is a plant which is, in many respects, unique. It will grow on acid soils and at times will make a stem growth which is remarkable. The famous Jack, who had interesting relations with a certain beanstalk, may have had preliminary tryouts with kudzu before making his notable climb to fame. A stem growth of from 25 to 50 feet in a single year is frequently made by the kudzu plant. It is sufficiently winter hardy after it once gets established. Although it is not all impressive the first year, it gets under way the second year, roots from the nodes and thickens its stand. A high percentage of mortality may be counted upon from the original setting of plants; in our own plantings we have secured only from ten to fifty per cent of the stand. You can also count on a period of three years before kudzu is ready for heavy pasturing and cutting. It will never be a crop for the tenant, therefore, or for the man who does

Give Them a Trial

QUITE a few letters which we have recently received show an increasing interest in legumes which will grow on sour or acid soils. Because of this interest and because the subject is so important, we have made considerable investigation and inquiry as to the so-called acid soil legumes and their practicability in eastern United States. The articles on this page by Prof. Cox of the New Jersey Experiment Station, and John H. Barron, of the New York State College of Agriculture, you will find valuable if you are at all interested in the great problem of growing more protein at home instead of buying it in grain.

We believe that the farms are mighty few where clover or even alfalfa cannot be grown if proper attention is given to liming and other needed factors; but in addition to these old stand-bys, it is possible that there are other legumes which can be grown on acid soil without the necessity of heavy liming. Some experiments on your own farm on a very small scale with them would not cost much, would add to the interest of farm work and might find you something that would be a valuable addition to the dairy ration, if you have had experience, successful or unsuccessful, with soy beans, vetch, sweet clover or other legumes, tell us about it in a short letter.—The Editor.

not stick to farming. There is a question as to its feeding value. I have been told that cows turned up their noses at it when they had the choice between kudzu and clover or alfalfa. It is apparently a valuable plant for unsightly places such as steep banks, where a permanent cover, requiring no attention, is desired. For the north it is not a proven crop as far as practical application is concerned.

Serradella and beggarweed are two other acid soil legumes, both annuals, and both advocated for forage and green manure. The former has been tried at a number of the experiment stations, but at only one, Massachusetts, did it make a good showing, being considered almost as good as soybeans. It is reported that lime is even harmful to the growth of this plant. Florida beggarweed is, I suspect, worthy of a little more attention than it has received north of Florida. It makes good hay and if cut early enough it will produce renewal growth. In Florida, if it shatters its seed it will often produce a good stand by self seeding the following year.

SOY BEANS AND VETCH PAY WELL

JOHN H. BARRON

The only acid soil legumes with which we have had experience are vetch and soybeans. Personally I am thoroughly convinced that there is a large place for these legumes in the agriculture of the northern states and in particular in the sandy regions of New York State.

Vetch sowed with oats and the regular application of grass seed on the sandy soils, on the average, increases the yield of new seedling by about one ton per acre. About 10 pounds of winter vetch are required to do this.

Find What CANADA has to offer YOU!

If your dream of success seems like a hopeless ambition, if you are discouraged trying to get ahead on high priced land, if your present location fails to give you opportunity, there is a new deal for you, a new chance in the fertile, virgin farms of Western Canada, where wheat produces 20 to 40 bushels to the acre, where the 1922 crop was biggest in history, where oats, barley and hay and fodder crops are the basis of a great dairy industry, and a man's work brings him success and prosperity.

Low Priced Land—the Last Great West

In Western Canada you still can buy virgin prairie land at \$15 to \$20 per acre, on long terms if desired, near to town, railroads, etc.—land such as has for many years produced the world's prize winning wheat, oats, barley, flax, rye, alfalfa. Canada had no "war time" land boom; prices are not inflated—you get in on the ground floor.

Taxes Favor the Farmer as Values Increase

The tax laws of Western Canada encourage the producing farmer. The tax on land is reduced when it is brought under cultivation—while on your buildings, machinery, improvements, personal property, automobile, there is no tax at all. A single crop is often worth more, acre for acre, than the cost of the land.

Rent Now—Buy Later Pay Out of Profits

Canada welcomes the industrious settler. What you have now isn't so important. If your capital is small, or you cannot sell your present holdings to advantage, rent a fertile Canadian farm and "try it out" for a season or two. Make a good living, increase your capital, and buy later. Farms may be rented from successful settlers on easy terms; in some cases with option of purchase.

Buy on Exceptional Terms—32 Years to Pay

For the benefit of those wishing to buy land a national non-profit sharing organization—the Canada Colonization Association—has been established with head office at Winnipeg, and United States office at St. Paul. This Association offers selected land convenient to railways—much of it at \$15 to \$20 per acre—on very small cash payment; no further payment until third year; balance extended over thirty years, but purchaser may pay up and obtain title at any time if desired. Interest six percent per annum on deferred payments.

We Help Find Your Opportunity

The Canadian Government maintains information bureaus in leading American centers, where you can get full information, without cost, about all parts of Canada. The men in charge are Government officials, interested only in the service of the prospective settler.

Get the Facts—No Cost

Farm News From Albany

Bills for TB Indemnities Await Governor's Signature

TWO bills, providing a total of \$5,000,000 to pay for tubercular cattle condemned by the State and slaughtered at its direction, have passed both the Senate and the Assembly, and have gone to the Governor for his signature. One bill would provide payment for cattle slaughtered during the fiscal year of 1922-23. The other provides for cattle slaughtered during the balance of 1923 and the spring of 1924. It is expected that if Governor Smith signs the bills—and it is believed he will—the money will become available in about six weeks after the bills are signed.

* * *

A joint committee of Senators and members of the Assembly held a hearing on the Rural School bill on Wednesday evening, April 11. Representatives of those who are for and against the bill spoke at the hearing. Full details of the hearing will be given next week.

* * *

The Downing bill providing \$8,000,000 for maintaining improved State and county highways was signed by Governor Smith during the past week.

* * *

Senator Nathan Straus, Jr., of New York, chairman of the Committee on Agriculture, has introduced a resolution to appropriate \$15,000 to investigate marketing costs and farm conditions. It is the belief that an investigation of this kind might solve the problem of wasteful marketing conditions which affect the cost of the farm produce to the consumer as well as the prices paid to the farmer.

* * *

Governor Smith has vetoed the "20-mile speed limit" bill, which, it is said, was a measure aimed at speed traps. The bill sought to eliminate speed traps by providing that speed limits set by third-class cities, incorporated villages and "second-class cities in counties adjacent to a first-class city" must not be less than 20 miles an hour. Under existing laws, the limit which may be set by the municipalities is 15 miles per hour.

* * *

Three bills designed to provide equal rights for women, which have already passed the Senate, have passed the Assembly unanimously. The measures introduced provide respectively for the descent of property to children without regard to sex; raising the age at which girls can make wills from 16 to 18, and giving women equal rights with their husbands in the matter of guardianship over children in case of separation.

* * *

Two measures designed to increase the salaries of members of the Legislature and Justice of the Court of Appeals were killed recently in the Assembly.

* * *

A bill providing for "short-ballot" has been agreed upon by the Governor and a committee from the Assembly. This bill would provide for amendments to the Constitution by abolishing the office of Secretary of State, Treasurer and State Engineer as elective officers, creating 19 civil departments with the heads appointed by the Governor. Other changes were made in the Constitution by this bill, such as the consolidation of some departments with others to avoid duplicity of effort, where the duties of present departments are overlapping. Inasmuch as this is a constitutional amendment, it will be submitted to the vote of the people before it could become a part of our Constitution.

ALONG THE SOUTHERN TIER

Maple-sugar making is now in full swing. The cold weather the latter part of March delayed this work very much. Some farmers were caught with their buckets well filled with sap. On the first of April, a foot of snow was reported to be in the woods. Frost went down last winter at least three feet.

The fire at the Borden plant at Afton the last week in March created some confusion in the delivery of milk. Arrangements were quickly made, how-

ever, to take care of the milk of the farmers. Takes more than a little thing like that to upset their plans very long.

An order has been issued by the Post Office Department at Washington discontinuing the office at Union, in this county. This now becomes a branch of the office at Endicott, and mail must be addressed Endicott, Union Station. The post office at Union was one of the first, if not the very first, to be established in Broome County.—E. L. V.

WESTERN NEW YORK NOTES

ALVAH H. PULVER

The Rochester office of the Federal Bureau of Markets has closed for the season after a busy seven months' service in providing shippers and growers with most valuable information. It is estimated that the tonnage of releases from this district in the last forwarding season mounted to \$75,000,000 in value, making the year's service the most useful to growers since the inception of the idea seven years ago.

The work of the bureau is most interesting. The service consists of a daily mimeographed report sent out to nearly 800 growers, shippers, brokers and railroad officials, containing information national in scope and giving data on every car of fruit and vegetables shipped in the United States and the destination, together with prices and market conditions at shipping points. Information of this kind has a tendency to prevent overcrowding of markets with any one particular commodity while a shortage may exist in another.

The bureau also sent out much data giving tabulations of storage holdings, crop estimates with special reports on apples, celery, lettuce, grapes and other leading crops of Western New York, together with reviews of prices prevailing in other years.

Women Endorse Rural School Bill

The Executive Committee of the Monroe County Home Bureau has endorsed the Downing-Hutchinson bill, embodying the recommendations of the Committee of 21 recently introduced into both houses at Albany. The members believe that all children of the State should have equal opportunities for education, and that the present system, designed in 1812, does not give equal opportunities to-day. The committee urges members throughout Monroe County to secure copies of the bill and press forward for its State-wide adoption.

"What Hath God Wrought?"

(Continued from page 333)

College of Agriculture, who has promised American Agriculturist to broadcast from this station next Wednesday evening at 7:30 P. M. Professor Warren is the author of the Warren Formula for determining the cost of milk production, and is known as one of the best farm economists in the United States. A few of the other speakers whom we have in mind to talk to you are Dean Mann of the New York State College of Agriculture, Jared Van Wagenen, Jr., and H. E. Cook, those genial farm philosophers, well known and loved by farmers throughout the East, and Mrs. Bridgen, President of the State Federation of Home Bureaus, who will have a special message for farm women.

Whether or not the American Agriculturist and American Telephone Company Farmers' Radio Service is continued will depend upon the interest and appreciation by farm folks. In order to get some definite information upon which to build a better farm radio service, we are asking the questions in the box on page 333. Fill in the answers as best you can, cut out the whole page and mail it to American Agriculturist, 461 Fourth Avenue, New York City. If you do not wish to answer all of the questions, answer some, anyway. Will you help by doing this? If you do not own a radio, perhaps you will give the questions to some one who does.

New Jersey Farmers' Purchasing Associations Federate

W. H. BULLOCK

THE New Jersey Farmers' Cooperative Purchasing Association came into being on April 3, with its incorporation by representatives of eight local purchasing associations in the State. This action followed the meeting last month at which the committee for incorporation was appointed. The new organization will purchase feed, fertilizer, binder twine, spray materials and other supplies at cost for its member associations, the latter representing 1,200 producers in New Jersey who as individuals purchased \$2,500,000 worth of supplies and equipment last year.

This is the first cooperative purchasing organization in New Jersey to be operated on a State-wide basis, and its function will be to serve the member organizations in New Jersey similar to the service of the Grange-League-Federation Exchange in New York. The first problem before the association is to learn the current season's needs of its member associations, after which pools along commodity lines will be formed. Tentative plans indicate that binder twine and a few other supplies may be handled during the coming months, while attention may be given late in the summer and next fall to such commodities as dairy feeds.

Officers for the Ensuing Year

The officers elected for the coming year are: President, Samuel Atchley, Trenton, Vice-president of the Mercer County Farmers' Cooperative Association; Vice President, T. Sherman Borden, Beverly, President of the Beverly Farmers' Cooperative Association; Treasurer, John H. Hankinson, Glen Moore; and Secretary, P. A. Garretson, Belle Mead, President of the Belle Mead Farmers' Cooperative Association. Mr. Atchley, Mr. Borden and Mr. Garretson, with H. H. Albertson of Burlington, President of the Burlington Fruit Growers' Cooperative Association, and Theodore H. Dilts, Three Bridges, President of the Hunterdon County Farmers' Cooperative Association are the five incorporators.

The five associations represented by these men, together with the following, comprise the present membership of the new State Purchasing Association: Bergen-Passaic Farmers' Cooperative Association of Paterson; Mt. Holly Fruit Growers' Cooperative Association of Mt. Holly; and Vineland Cooperative Association of Vineland.

This is considered one of the most important organization moves affected this season in New Jersey. It follows upon two years' investigation by the Purchasing Committee of the New Jersey Federation of County Boards of Agriculture and the New Jersey State Bureau of Markets. Membership is open to any cooperative purchasing association in the State, the liability of each member association being limited to \$1,000, and the liability of each director to \$500.

Dairymen Look for Late Spring Pasture

Throughout Northern New Jersey, meadows and pastures showed no signs of awakening by early April. The few warm days so far this season were not sufficient to stimulate the grass, and dairymen in Sussex, Warren, Hunterdon and adjacent counties have shaped their plans for a late season.

Severe weather at the close of March and in early April caused damage to crops of truck growers in Passaic and Bergen counties who did not protect their frames against the cold weather. Considerable loss was reported from some sections. On the other hand, the unseasonable weather apparently did not damage fruit buds in Central and Southern New Jersey, these being reported in as good shape as earlier in the season.

Plans for road work are progressing rapidly in many of the counties, recent meetings of the local authorities indicating generous funds for county work. In Morris County the highway authorities recently laid plans for the improvement of 54 miles of county roads at a cost of \$257,490.

We take the A. A. and enjoy reading it very much.—Mrs. O. A. J., Penna.

Air-Cure Your Hay with McCormick-Deering Hay Tools

IT ISN'T sun-drying that puts quality into hay, but *air-curing*. And hay is air-cured best when side-tedded into light, breeze-sifting windrows such as those that trail off in the wake of the

McCormick-Deering Side Rake and Tedder

You can follow closely behind the mower with this machine and rake the hay before the leaves begin to wilt. The teeth strike the heads of the hay first and rake clean, picking up every last wisp—and there is no shattering of leaves. The hay is turned completely over and deposited in snug, airy windrows through which the air circulates freely, curing evenly both stems and leaves with its magic touch.

McCormick-Deering Side Rake and Tedder

McCormick No. 6 Mower

There are points of mechanical excellence that distinguish this fast-working, gentle hay-handling machine from all other types of side rakes and tedders. There are also many points of mechanical excellence that distinguish all hay machines made in the International Harvester factories—McCormick, Deering and Milwaukee mowers, McCormick-Deering self-dump rakes, tedders, sweep rakes, stackers and loaders. Ask your near-by McCormick-Deering dealer to show you.

How I Handle Baby Chicks

Avoiding Common Chick Troubles That Cause Losses

I FIND that incubators are the most satisfactory way to hatch chicks. I have tried the old way with hens, but observed that when hens were laying they would not set, and when they were setting they would not lay. By the time the hens wanted to set, I found that they were my best breeding stock, but, of course, could not use their eggs. The small incubator (144-egg size) I find the most suitable for myself. They are easily handled, and not so heavy work as the large size. I have two, and have been using them seven years. I have had no record-breaking hatches, but what hatches I do get are strong, healthy, vigorous chicks—the weaklings are all culled in the hatch.

I use hens for the brooding stage, giving each hen about 20 chicks at the start. In about a week or 10 days, according to their development and the weather, then a hen can take care of more. I used artificial brooding four years, but since trying this way, I find it more satisfactory. I do not know why, but I notice the chicks become more natural by being with a nice, motherly old hen, and they soon learn to get to shelter should a rain come up. On rainy days they come out only between showers. I use colony houses 6 by 15 for brooding, and as they get larger move them into the regular house, which is 15 by 50.

A Novel Feeding Practice

As to feed, anyone may get the formulas for mixing the different rations from any of the State experiment stations. There are several ready-mixed feeds for poultry on the market, but I prefer my own mixing. I have tried many different kinds of feeds and formulas, and from them have evolved a formula of my own, which is very satisfactory.

When the chicks are 10 or 12 weeks old, instead of keeping on with the growing ration, I change to the laying ration. I figured that if a ration is good for laying hens it must also be good for growing birds and also develop the egg-producing organs. When they are put in the house for the winter for laying purposes, about October 1, it is too late for me to start the laying ration. I want them in shape, then, to start work.

In the past years I thought, also, that there must be at least a foot of litter in the house during the winter, or the birds would get no exercise, and get fat and lazy. Now, I think if a hen must expend all her energy scratching all day long to get enough to satisfy her appetite, she has no resources from which to produce eggs. Therefore, I keep enough dry litter on the floor to protect them from the weather. But the main thing with poultry is to keep them satisfied and contented, and never crowded, thus eliminating danger from sickness and disease.

Some Worth-while Figures

I know that expert poultrymen will say that I am "mad" to follow the above method in caring for poultry, but if they will peruse, carefully, the following expense account they will at least concede that "there is method in my madness." On April 10, 1922, I had hatched 100 White Wyandotte chicks; May 12, 1922, 140 White Plymouth Rock chicks. Of this bunch I raised to maturity 210 birds, the others being destroyed by varmint. I began marketing cockerels October 10, and by December 1, I had sold 100 for \$240; used 10 for our table and have 100 pullets now. The Wyandotte pullets started laying September 1. The Rock pullets started November 1. Expenses, cost of eggs, expenses of running incubators, actual cost of feed to December 1, \$235; cost of feed December, January and February, \$113.50; total, \$348.50.

Marketing 100 cockerels, \$240; 50 dozen eggs, September and October, \$25; 35 dozen eggs, November, \$21; 85 dozen eggs, December, 1922, \$59.50; 115 dozen eggs, January, 1923, \$80.50; 110 dozen to February 22, 1923, \$77. Total receipts, \$503. Total expenses, \$348.50, and profit, \$154.50, over the

actual cost of feed for my season's labor, and 100 laying pullets free of encumbrance. Until three years ago, when prices began to soar, I allowed 10 per cent depreciation on the incubator, but then I raised it to 15 per cent, so now (theoretically) they have depreciated 100 per cent. But practically they have paid all charges, and I have two good incubators, clear, thus lessening the cost of production for the coming years.

TREATING CHICKS FOR GAPES

ELMER WHITTAKER

The wet spring season of the year is the time when they are most troublesome if they bother at all. They are found almost entirely upon heavy clay soils, for the reason, that such soils are suited to their propagation. The trouble is indicated by an apparent gaping, which, in reality, is a gasping for breath, caused by a clump of small worms lodged in the wind-pipe, and sucking blood from its walls at the same time. These worms are about the size of coarse No. 30 thread, and from a half to three-quarters of an inch long.

Infection may take place by the swallowing of the worms or their eggs in food or water. Their eggs have been found in earth worms, or angle worms, as they are commonly called, and are supposed to infest the soil or litter of yards, old wood-piles, and trash. The infection is much more troublesome where chickens have been raised for years without the soil having been turned, or anything raised upon it. This is especially the case upon heavy soils. It usually comes on when the chicks are from four to eight weeks old, and takes the weaker ones first. Many of the stronger ones are, no doubt, infested, but have the strength to throw it off and outgrow it.

Other Symptoms

Symptoms besides gaping include convulsive shaking of the head, a contracted neck, closing of the eyes, drooped wings, roughened plumage, and a weak, staggering walk. Treatment should consist in separating the infected fowls from the rest of the flock or brood, and keeping them in dry, warm, disinfected quarters.

To remove the worms from the windpipe is a delicate operation, and requires deft, nimble fingers to do it successfully, for it must be done quickly when once begun.

A stiff hair from the tail of a horse should be provided, doubled and twisted, leaving a small loop at end just large enough to pass down the opening of the wind-pipe. Hold the mouth open with the fingers so you can readily see the upper end of the wind-pipe, and when it opens, insert your loop and run it down the pipe, at the same time giving it a twist and removing it. This will generally entangle the worms and bring them out in a clump. This operation must be carefully and quickly done, or your patient dies in your hands. Some are used to dipping the hair in turpentine before using. Any worms removed should be burned at once.

Another Good Remedy

Another good plan is to place all the affected chicks in a small box, covering it with loosely woven burlap and sprinkling air-slaked lime on the cloth, tapping it lightly to make it sift through the cloth, among the chicks. This dust is drawn into the trachea in the gasping for breath, suffocating the worms and causing them to lose their hold. Then the sneezing of the chick throws them out. There should be a burlap covering to the bottom of the box, and, after the work is done, all should be removed and burned.

Some claim good results from a drop of camphor down the throat. Prevention is the best, and that consists in thoroughly spading or plowing all the runs over which the chicks work. This has a tendency to clean the worms out, and they are soon all gone when turned up to the sun. The growing of a crop on the ground is a good thing. Make

it a rule to keep the young chicks in coops until the morning wet is dried off. This is one of the greatest helps.

LEG WEAKNESS IN BABY CHICKS

There are a number of factors which can cause this leg weakness in chicks, which is so very common among the early broods, and very often among what appears to be the strongest chicks. Leg weakness may be inherited. The constitutional vigor of the parent stock may not have been such to impart rugged constitutions to the baby chicks, which during the unsettled and cooler weather of early spring give way to constitutional inability to fight the hardships under which they live. If it is apparent that this is the factor causing leg weakness, the only thing to do is care for and feed the chicks as well as possible and use them for layers or market stock rather than for breeding purposes another season.

Leg weakness may also be caused by malnutrition, especially if the ration lacks bone-making food. The feeding of skim milk is an excellent idea, as it not only furnishes food for the chicks, but is a regulation for the digestive system and lactic acid property of skim milk, is a tonic, and an important one, to prevent the very common white diarrhoea.

Danger in too Long Confinement in Warm Quarters

Perhaps one of the chief causes of leg weakness is confinement of the chicks to a warm, dry floor for too long a period, and, other conditions being equal, this is probably the cause for the trouble. During a warm spring such as has been the case this year, great care must be taken with a coal-burning hover to prevent too high a temperature.

The chicks, after a week old, should run out of the brooder for a few hours on available clear day, even though the ground may still be cold and frozen. The chicks will seldom catch cold while moving about. They should not be allowed to stand out of doors, but must be kept moving until they learn to go back to the warmth of the hover when they feel cold.

Best regulated brooders are so constructed that the heat reaches the chicks from above and not through the floor. Sometimes chicks will roost on the hot water pipes and heat conductors and protective measures must be made to prevent this.

BUILDING A GOOSE SHED

ELMER WHITTAKER, MASSACHUSETTS

Geese do not require much protection from cold, but they need a dry and weather-proof shed for a resting place. A flock of geese will often swim in a pond when the ice forms all over the pond, except on the spot where they are swimming, where they keep it from freezing by keeping the water moving, and will suffer no damage; but if their quarters are wet, or even damp, trouble will follow.

A shed allowing five or six square feet of floor space to each goose to be housed, is large enough if the geese can run out whenever they wish. It may be made of cheap boards on a substantial frame and covered with tar paper to keep the water out. Glass windows are not necessary (though they are to be advised), but there must be sufficient open space in the south side to admit light and air, so that the sun will dry out the building readily, and this space should have a curtain, or burlap, or loosely woven cotton cloth, to keep out rain and snow. On fair days it must be opened.

The place should be on a well-drained place, and it is best to fill in with sand a few inches above the surrounding ground, to do away with any tendency toward dampness. A thick bed of straw, leaves, cornstalks, or something of the kind should always cover the floor, and should be removed, and a new supply put in as soon as it becomes damp.

Make the Pullets Scratch.—Pullets should be made to scratch for the grain given them as the exercise is necessary to retain good health. If any signs of slackness are apparent, a little epsom salts should be given either in their drinking water or in their mash.

150 HEALTH-GUARANTEED Foundation-Quality Holsteins 150

TO BE SOLD IN

THE 1923 SALE

N. Y. State Fair Ground, Syracuse, April 17-18

COMMENCING AT 10 A. M. EACH DAY

THE CONSIGNMENTS:

Wheatfield Farms Herd of 50 head. Complete dispersal of the remarkable herd that has developed 21,000-lb. to 25,000-lb. yearly record 3-yr-olds and cows with records up to 33,000-lb. milk in a year, also year's butter producers with 1090 to 1211-lb. to their credit. **One of the greatest living May Echo Proven Sires** is in the sale with fifteen of his daughters—heifers of true foundation quality.

H. A. Moyer's Milking Herd—26 cows of show quality, bred to the 33-lb. sire, Empire Segis. No other sale of the season can show a finer consignment.

Brock & Jenks' Herd, a herd that has developed some of the greatest producers in the Eastern States. This offering consists mainly of daughters of A. R. O. dams with records up to 25 and 26-lb. butter in a week and year's milk records up to 21,000-lb. at 3 years old.

IN ADDITION select consignments are included from the herds of a number of representative breeders.

The three herds named are all on the Federal and State Accredited Plan and like the other consignments have all passed a clean test. We offer in this one sale all the advantages of three separate high-class herd dispersals with the best that could be selected from other quality establishments. This will be a sale of Holsteins bred for heavy milk and butter production. The 60-day health guarantee applies to every consignment.

Keep on Feeding Concentrates

A RATION made up of 37.4 lbs. corn silage and 14.5 lbs. alfalfa hay has less than 4% protein and is not to be considered as a milk producing ration.

Diamond Corn Gluten Meal has more than 10 times this much protein. One sack of Diamond contains more protein than half a ton of the home-grown ration. Think of this when you think of obtaining protein economically.

If you feed concentrates:—

- (1) You can market more of your alfalfa or grow other paying crops on the same land.
- (2) You can get a milk flow that will pay a good profit over the cost of feed.
- (3) You can be assured of the good health of your herd.

Roughages are O.K. for giving bulk to the ration but should never be used as the sole feed.

Base your ration on Diamond Corn Gluten Meal or Buffalo Corn Gluten Feed—the two milk making concentrates that are in

Cutting Costs With Beets

A Means of Getting More Out of Our Purchased Feeds

DAIRYMEN'S By ALLEN RIDGWAY

Efforts toward economic production have led to an almost universal use of the silo, and, within the past few years, to the extensive use of alfalfa and soy beans.

Those who have calculated not only savings, but the quantity of milk obtained through use of home-grown feeds, have further turned their attention to pedigreed mangels—"cow beets."

Several factors have entered into the study of mangels and their use. Some are found in the shifting conditions which require dairymen to modify, from time to time, their systems of management. Others are in the reports coming from agricultural experiment stations.

Consider first the purely economic causes. It was less than a generation ago that New York and the New England States were the great center of dairy production. In those days the by-products of the flour and linseed oil mills of the Northwest and the cotton oil mills of the South were shipped to them to be fed to dairy cattle. Then, one could buy bran for \$9 a ton and linseed and cotton seed meal for about \$15 a ton, less than one-third of what they cost to-day.

Competition Coming In Rapidly

NOW, according to recent census, Minnesota and Wisconsin have as many milch cows as New York. Iowa and Illinois are not far behind. The Western States are not only competing with New York and New England for dairy feeds, but they are competing with one another. The supply of bran is not increasing and cotton and linseed meal are diminishing.

Freight rates have increased so that they are a serious factor in using concentrates.

The total cost of purchased feeds, in brief, has advanced at a rate out of proportion to the cost of other production factors and the price which dairy products bring on the market.

The use of silage, alfalfa and the soy bean grew out of these conditions within the memory of those now actively engaged in feeding cows. Each represents a step in the dairyman's progress toward growing his own feeds. Each brings him nearer to his desire to be independent of the by-products of mills located at a distance, which carry in addition to their initial cost the burden of high freight charges. Use of mangels is one possible means by which Eastern farmers can meet the high cost of feeds.

While they have been fed to live stock in Europe for more than 300 years, it was not until official testing had been well started in this country that mangels began to be fully appreciated by the American farmer. Then their popularity increased so rapidly and their use in the test ration became so general that an experienced tester now hesitates to feed a test cow without having beets at hand, either fresh mangel beets or in the form of dried sugar-beet pulp.

Fresh Beets More Practical

IN increasing degree they will probably be the fresh beets. It is difficult to get a steady supply of dried pulp. It is a by-product from the sugar-beet factories. When it was first put on the market it sold at a moderate figure, for use principally in test rations. Its wonderfully stimulating effect upon the milk flow brought it popularity. After the war, however, the acreage of sugar beets was reduced and the supply of beet pulp was materially curtailed. As a result, the price went up until the pulp sells now for considerably more than \$50 a ton, an almost prohibitive cost. Moreover, there are long periods during the year when it is off the market entirely.

Mangels have all the feeding qualities of dried beet pulp. They have the same tonic effect upon the cow, stimulate the appetite in the same way, and are just as much an aid to digestion. They are even more palatable, and because they are fed fresh, furnish an unfermented natural succulence that keeps the system open and cool, a condition much to be desired in a high-class dairy cow.

The objection that formerly was made to producing them. This was relative and had no justification except when concentrates cost less than they do now, and when dried beet pulp was plentiful and cheap.

The cost of growing mangels depends largely, if not entirely, upon the yield per acre. This, in turn, depends upon the source of the seed used. In some parts of Europe mangels are as important cattle feed as corn is here, and the same scientific effort that Americans have devoted to corn has been, by the Europeans, used to increase the yield per acre and feed value of mangels. A number of high-yielding varieties, with a greater proportion of dry matter than is ordinarily found in mangels, have been developed. The seed from which they are grown is specifically pedigreed.

A yield of 72 tons per acre has been produced from these seeds in the United States and reports from a large number of growers in different parts of this country indicate an average crop of well over 32 tons per acre from these pedigreed imported seeds. This average is lower than the yields made in Great Britain, but it is correspondingly higher than the yields obtained from ordinary seed.

As to the feed value of mangels, the Cornell Experiment Station reports that they contain 12.75 per cent dry matter. A 32-ton yield per acre would contain, therefore, 8,160 pounds of dry matter.

Henry, in his "Feeds and Feeding," states that practically all the dry matter in mangels is digestible. If it is assumed that even 90 per cent is digestible, a 32-ton yield would produce 7,344 pounds, or 3.67 tons of digestible dry matter, a larger amount of digestible dry matter than is produced with any other crop.

Some Worthwhile Cost Facts

WING and Savage, as well as some Danish investigators, have found that the dry matter in mangels is equal in value, pound for pound, to the dry matter in grain, and that mangels may replace half the grain in the dairy ration. An estimate based on these facts shows that an acre of mangels yielding 32 tons, is worth, measured by the price of grain to-day, about \$167. Carefully kept figures show that pedigreed mangels can be grown for less than \$4 per ton.

Mangels fed with corn, oats or soy beans for concentrates, and silage, clover, alfalfa or soy bean hay for roughage, will decrease the amount of land required for the maintenance of a cow, and in consequence increase the number of cows that can be fed without purchased feeds upon a farm of a given size.

A ration made up of these home-grown feeds will not only keep up a satisfactory milk flow, but will reduce the cost of production so that the dairyman can make a fair profit on his investment.

Legumes for Acid Soils

(Continued from page 337)

Inasmuch as vetch hay in feeding value is comparable to alfalfa, it looks to me like the use of vetch was worth while.

In the market, garden sections on the sandy lands, vetch, has a considerable place as a cover crop to live over the winter. Used in combination with rye, it is very satisfactory. In this connection, however, it is worth stating that experience with vetch on Long Island, has not been uniformly successful. It seems to be hard to establish for some unknown reason. However, this year on demonstration plots, after having had two partial failures, the vetch is going into the winter in very satisfactory condition.

Throughout the southern tier counties of New York State, soybeans are showing up very well as a supplement to corn for silage at the lower elevations where the growing conditions are fairly favorable for corn. In general the best way of utilizing the soybeans for this purpose seems to be to plant them alone

G.L.F. POULTRY RATIONS

Known Ingredients of Known Quality
in Known Proportions

Poultry Feeding specialists at the colleges of agriculture in the territory served by the Cooperative Grange League Federation have approved the formulas of G.L.F. Rations.

Practical Poultrymen using the rations the year around report excellent results.

Feed G.L.F. Rations and you will know just what your birds are eating.

See your G.L.F. Agent or write for booklet of formulas.

The Coop. G.L.F. Exchange, Inc.
Syracuse, New York

Five Distinctive Features:

1. G.L.F. Poultry rations contain a larger variety of ingredients than is usually available in your locality.
2. The quality of the ingredients and the pounds of each are stated.
3. The digestible nutrients in each ration are high and the fibre content is low.
4. Dried buttermilk and dried skimmed milk are used and the animal proteins are high.
5. Accurately operated mechanical mixtures make a thoroughly mixed and uniform ration.

in rows and cultivate them or broadcast by hand, or solid with a grain drill. Usually about four-fifths of the regular silage corn area should be planted to silage corn and one-fifth to soybeans. The soybeans in our experience have yielded per acre of green weight, over one-half as much as corn to fully as much as the corn. Inasmuch as they are rich in protein when mixed with the corn at silo filling time, they considerably increase the content of the silage corn in its valuable feed nutrient.

Soybeans also have a considerable place as a hay crop on sandy and gravelly lands. They can be sown as above mentioned for silage and will yield two to three tons of hay per acre, which is very palatable and high in feeding value.

WHY BUILD A SQUARE SILO?

I am putting up a new square silo, some tell me to board it on the outside, and others tell me not to. Which do you think is the better way, and what is your opinion of putting on a roof? This silo is 13 feet square and 30 feet high. Please tell me how many tons it will hold?—J. E. H., New York.

I wonder why you are building a square silo, for I thought that this idea had been so long ago relegated to the limbo of bad practice that no one ever built square silos any more.

Round silos are more uniformly stronger, permit of more even settling of the grain, and actually keep silage better. I do not know just what you mean by boarding it on the outside. If you have built it of wood, I assume you are using studs and boarding it on the inside. Your question is as to the desirability of the outside covering. It may help a little bit in preventing freezing, but this consideration is really of small moment. It may make the structure look a little better to have it boarded on the outside. Personally, I believe a roof is a desirable adjunct to any type of silo, as it prevents the gathering of great quantities of unnecessary moisture inside the silo in wet seasons, to say nothing of snow. The silo of the size you mention will contain slightly in excess of 100 tons.—K. J. T. E.

CARCASS INDICATES T. B.

I have butchered a pig about four months old and find that the liver is all covered with yellow spots. About ten days before butchering, the mate of the one I butchered, died. What do you think was the matter? Is the meat fit to use, of the one I butchered? It looked to be in good health before killing.—(Jacob Schmidt, Saratoga County, N. Y.)

Your description leads us to infer that without a doubt the animal was suffering from tuberculosis and under no condition should the meat be used for food. As a matter of precaution you should call your veterinarian to examine the rest of the animals on your place. If it develops that the animals were suffering from tuberculosis or another disease such as hog cholera, new stock should not be placed in the old quarters.

LIVESTOCK SALES DATES

Now! you can get a De Laval Milker

FOR

10% DOWN
6% a month

The World's Best Milker on the Easiest Terms

NOW you can get a De Laval Milker on any terms you desire—for cash, on time, or on installments.

Over 20 years were spent in the development of the De Laval Milker, until the De Laval Company was absolutely sure of its mechanical perfection. Since then over 10,000 have been sold and actual use has proved the De Laval to be superior to any other method of milking.

Increased production enabled prices to be reduced in September 1921 and again in September 1922, which now places De Laval Milker prices on a "rock bottom" basis.

Finally, the announcement of these extremely liberal terms places the De Laval within the reach of any one needing a milking machine.

For 10% down you can start using a De Laval right now, and 6% a month for 15 months pays for it. You can save enough in time and labor, and get enough more milk of better quality, to more than meet the monthly payments.

There is now no need of milking by hand, which is slow, costly and disagreeable. Get your De Laval in now before your rush season. See your De Laval Agent or write us for full information.

UNADILLA SILOS

They Lead

MORE Unadilla Silos are bought each year than of any other two makes in the East. They lead because of their economy, convenience and exclusive features. The Unadilla door-fasteners form the famous, wide, safe, permanent ladder under the door opening. All hoops are adjusted from this ladder. The continuous door opening and Unadilla airtight but non-sticking, non-freezing doors permit silage to be shoved out instead of pitched overhead.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

How Much Is A Bunch?

Marketing Problems That Farmers Have To Face

IN most business buying and selling is done on a basis of a measured quantity. This can hardly be said of the bunch crops—radishes, beets, carrots and the like. On some markets, custom has fairly well established certain counts, sometimes varying with the season. Beets may start at three per bunch and later be increased to four or more, the size of the roots increasing at the same time. Incidentally, quality is likely to diminish and the skillful buyer is willing to accept smaller roots which show evidence of rapid growth. Trouble arises when the market begins to be over-supplied. The less skillful salesmen tend to tempt the trade, not by cutting the price per dozen, but by increasing the size of the bunches. It is not long until the situation is hopelessly tangled and a purchase virtually become a matter of "this many for so much." Just how the problem can be solved is a question. A strong organization would be able to accomplish something but market gardeners are hard to organize because they compete so directly with each other. It would be very difficult to establish legal standards, because it would be hard to draw specifications that would hold water. Who has an idea as to the way out?—PAUL WORK.

MARKET FOR BROWN EGGS

Will you please give me some advice relative to a market for brown eggs? Are there any cities where brown eggs are much in demand? Please send me the names of commission merchants in such cities.—F. A. CONERO, Forestville, N. Y.

Of late the New York market has been especially good for brown eggs. During the second week in March, the New York quotations on brown eggs, were higher than those for whites of the same quality, a thing which has not happened in years. Usually Boston shows some preference for brown eggs over whites. The discrimination against brown eggs in the New York market has been gradually disappearing in the last few months.

Under separate cover we are sending you a list of the licensed and bonded commission merchants which farmers may obtain by writing the Department of Farms and Markets, either at Albany, N. Y. or 90 West Broadway, New York City.—H. H. J.

SELLING POTATOES COOPERATIVELY

I have a lot of potatoes on hand for which I have no sale. A number of us farmers can easily get a carload together and ship if only we had a market for them. We would greatly appreciate it if you would inform us of one or two receiving houses.—ANDREW GRIEBEL, Lueinda, Pa.

The most convenient market to you, of any size, would be Pittsburgh, and the following produce dealers may undoubtedly be able to handle your crop. The men mentioned, handle potatoes and are well rated in the wholesale produce trade: Chester Frazell, Pennsylvania Produce Yards; C. C. Spencer, 1810 Pike Street; Free Bros. Co., 42-44 18th Street.

Before you ship it would be best that you write to each of these three firms, giving them an idea of the number of you men who will make up a car of white potatoes. Ask them when they would like your car to arrive. Then in a cooperative way, you can load your car and forward them on consignment. Under the date of writing the Pittsburgh market is better than the New York City market. Furthermore, you will save freight by shipping to Pittsburgh.—H. H. J.

BEST TIME TO MARKET BROILERS

Will you please give me some information relative to raising broilers for the Thanksgiving and Christmas trade? Can you tell me whether there is much demand for them at that time? Also what the usual price is?—H. S. HAZEN, Mercer, Pa.

The best periods in which to sell broilers are between the first of February and the middle or last of April, the month of June, and especially just before July 4. Last year there was a very heavy

supply of all kinds of poultry from the west, including broilers and young chickens from the first of October on, the prices were lower between Thanksgiving and Christmas, than at almost any other time during the year. There is no special demand for broilers at Thanksgiving time and but little extra demand at Christmas. There is a little more at New Year's. We would advise you to try to produce broilers for the Fourth of July market, or for the early spring market. Last year at Christmas time broilers and young chickens brought from 16 to 21c, colored, 20 to 21c, Leghorns, 16 to 18c.—H. H. J.

GRADING EGGS FOR BEST PRICES

Will you please give me some information about grading my eggs? I ship about five cases a week from my own hens and I have not been able to learn much about grading them. I have the Cornell Reading Course bulletin on marketing eggs, but I don't know how the different grades, as outlined by Cornell, are quoted in the market reports. Mine are all white eggs of Henney quality and so far I have made two grades of them, over and under 2 ounces. Would it pay me to candle my eggs? Where can I get new flats, fillers and cushions and is there any advantage in using new cases? Where can one buy new knocked down cases? Second-hand cases cost me 19½¢ landed here by getting 200 at once.—F. W. SLY, Woodhull, N. Y.

In the issue of the American Agriculturist of January 27, there was an article which answers most of your questions relative to the meaning of the grade terms used in the wholesale egg trade. It is doubtful whether it would pay you to candle your eggs at this time of the year especially. Candles are more necessary where you are troubled with blood spots, or interior defects or when eggs are collected from a variety of uncertain sources. Where the quality is strictly fresh and the eggs are promptly gathered and forwarded, it is not always worth while to candle.

Assorting eggs as to size and color is always desirable. Prompt shipment is essential.

The firm of Potter & McAuliffe, at Whitney Point, N. Y., can give you quotations on new cases, knocked down and on new flats and fillers. The customary charges for good sound, second hand cases, shipped from New York City, is 10 cents each, F. O. B. New York. If you use only clean, strong cases, and see that they are properly nailed and strapped as required by the express company, you probably get nearly as good results as shipping in new cases, but we would urge you to use only fresh flats and fillers.—H. H. J.

Is the American Home Slipping?

(Continued from page 330)

sening their opportunity to make their own home.

It is because I feel so strongly that every effort must be made to emphasize the importance of the home and home-making, I am an enthusiastic supporter of the Home Bureaus. I feel that they are doing much to dignify the greatest and most worth-while profession in the world in bringing to women a better appreciation of their fundamental job. They should be better understood and used.

Next week, or in an early number of American Agriculturist, if the editor will allow me, I shall tell you what the Home Bureaus are and what they are trying to do, as I see it from a man's standpoint. In the meantime I challenge all the feminine curiosity in American Agriculturist's 125,000 homes to guess who I am. Anyway, you can relieve your feelings by writing me care of the Agriculturist, and the editor will give me your letters.

Another troublesome little express claim for broken eggs was recently settled by the American Agriculturist in behalf of Mr. Aneus Jensen of Gorham, N. Y. A reliable New York commission house made an affidavit that the eggs were received badly broken, and upon filing a claim the express company settled without more delay.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437

Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

The Valley of the Giants—By Peter B. Kyne

THE Colonel puffed thoughtfully for a while—for which the Mayor was grateful, since it provided time in which to organize himself. Suddenly, however, Pennington turned toward his guest.

"I hadn't anticipated discussing this matter with you, Poundstone, and you must forgive me for it; but the fact is I am very greatly interested in this proposed railroad."

"Indeed! Financially?"

"Yes, but not in the financial way you think. If that railroad is built, it will have a very disastrous effect on my finances."

"I am amazed, Colonel."

"You wouldn't be if you had given the subject very close consideration. When my own timber is logged out, I will want other business for my road, and if the N. C. O. parallels it, I will be left with two streaks of rust on my hands."

"Ah, I perceive."

"You agree with me, then, Poundstone, that the N. C. O. is not designed to foster the best interests of the community?"

"Well, Colonel, you are quite right."

"Of course I am right. I take it, therefore, that when the N. C. O. applies for its franchise to run through Sequoia, neither you nor your city council will consider the proposition at all."

"I cannot, of course, speak for the city council—" Poundstone began, but Pennington's cold, amused smile froze further utterance.

Poundstone studied the pattern of the rug, and Pennington, watching him sharply, saw that the man was distressed. Then suddenly one of those brilliant inspirations which had helped so materially to fashion Pennington into a captain of industry, came to him.

"Let's not beat about the bush, Poundstone," he said with the air of a father patiently striving to induce his child to tell the truth, and save himself from the parental wrath. "You've been doing business with Ogilvy; I know it and you might as well admit it."

Poundstone looked up, red and embarrassed. "If I had known—" he began.

"Certainly, certainly! I realize you acted in perfect good faith. You're like the majority of people in Sequoia. You're all so crazy for rail-connection with the outside world that you jump at the first plan that seems to promise you one. Have you promised Ogilvy a franchise?"

THERE was no dodging that question. Poundstone could not guess just how much the Colonel really knew, and it would not do to lie to him. Poundstone only knew that Ogilvy could never be to him such a powerful enemy as Colonel Seth Pennington; so he chose the lesser of two evils.

"The city council has already granted a temporary franchise," he confessed.

Pennington sprang furiously to his feet. "Dammit," he snarled, why did you do that without consulting me?"

"Didn't know you were remotely interested." Now that the ice was broken, Poundstone felt relieved and was prepared to defend his act vigorously. "And we did not commit ourselves irrevocably," he continued. "The temporary franchise will expire in twenty-eight days—and in that short time the N. C. O. cannot even get started."

"Have you any understanding as to an extension of that temporary franchise, in case the N. C. O. desires it?"

"Well, yes—not in writing, however. I gave Ogilvy to understand that an extension could readily be arranged."

"Any witnesses?"

"I am not such a fool, sir," Poundstone declared with asperity. "I had a notion—I might as well admit it—that you would have serious objection to having your tracks cut by a jump-crossing at B and Water streets." And to justify himself and inculcate in Pennington an impression that the latter was dealing with a crafty mayor, Poundstone smiled knowingly. "I repeat," he said, "that I did not put it in writing." He leaned back nonchalantly and blew smoke at the ceiling.

"You oily rascal!" Pennington soliloquized. "You're a smarter man than I thought. You're trying to play both ends against the middle." He recalled the report of his private detective and the incident of Ogilvy's visit to young Henry Poundstone's office with a small leather bag; he was more than ever convinced that this bag had contained the bribe, in gold coin.

"Ogilvy did business with you through your son Henry," he challenged. Poundstone started violently. "How much did Henry get out of it?" Pennington continued brutally.

"Two hundred and fifty dollars retainer, and not a cent more," Pound-

stone protested virtuously—and truthfully.

"Two hundred and fifty dollars! Poundstone, you're funny. Upon my word, you're a scream." And the Colonel gave himself up to a sincerely hearty laugh. "You call it a retainer," he continued presently, "but a grand jury might call it something else. However," he went on after a slight pause, "let's get down to brass tacks. How much do you want to deny the N. C. O. not only an extension of that temporary franchise but also a permanent one when they apply for it?"

Poundstone rose with great dignity. "Colonel Pennington," he said, "you insult me."

"Sit down. You've been insulted that way before now. Shall we say one thousand dollars per each for your three good councilmen and true, and for yourself that sedan of my niece's? It's a good car. Last year's model, but only run about four thousand miles and in tiptop condition. It's always had the best of care, and I imagine it will please Mrs. P. immensely. Of course, I will not give it to you. I'll sell it to you—five hundred down upon the signing of the agreement, and in lieu of the cash, I will take over that jitney. Then I will employ your son Henry as the attorney for the Laguna Grande Lumber Company and give him a retainer of twenty-five hundred dollars for one year. I will leave it to you to get this twenty-five hundred dollars from Henry and pay my niece cash for the car."

For the space of a minute the Mayor weighed his son's future as a corporation attorney against his own future as mayor of Sequoia—and Henry lost.

"It might be arranged, Colonel," he murmured in a low voice—the voice of shame.

"It is already arranged," the Colonel replied cheerfully. "Leave your jit at the front gate and drive home in Shirley's car. I'll arrange matters with her."

RIDING home that night in Shirley Sumner's car Mrs. Poundstone leaned suddenly toward her husband, threw a fat arm around his neck and kissed him.

"Oh, Henry, you darling!" she purred.

"Oh, go to the devil!" he roared angrily. "Shut up and take your arm away. Do you want me to wreck the car before we've had it an hour?"

Colonel Pennington had little difficulty in explaining the deal to Shirley, who was sleepy and not at all interested. The Poundstones had bored her to extinction, and upon her uncle's assurance that she would have a new car within a week, she thanked him and retired. Shortly thereafter the Colonel sought his own virtuous couch and prepared to surrender himself to the first good sleep in three weeks. "Luckily I blocked the young beggar from getting those rails out of the Laurel Creek spur," he mused, "or he'd have had his jump-crossing in overnight—and then where would I have been?"

He was dozing off, when a sound smote upon his ears. Instantly he was wide awake, listening intently.

Suddenly, out of the deep, rumbling diapason he heard a sharp click—then another and another. He counted them—six in all.

"A locomotive and two flat-cars!" he murmured. "And they just passed over the switch leading from the main-

line tracks out to my log-dump. That means the train is going down Water Street to the switch into Cardigan's yard."

With the agility of a boy he sprang into his clothes, raced downstairs, and leaped into Mayor Poundstone's jitney, standing in the darkness at the front gate.

CHAPTER XXVI

THE success of Bryce Cardigan's plan for getting his rails down from Laurel Creek depended entirely upon the crew of the big mogul. Should the engineer and fireman decide to leave the locomotive at the logging-camp for the night, Bryce's task would be simple. On the other hand, should they run back to Sequoia with the engine, he and Ogilvy faced the alternative of "borrowing" it.

Throughout the afternoon, after having sent his orders in writing to the woods-boss, via George Sea Otter (for he dared not trust to the telephone), he waited in his office for a call from the logging-camp. Finally, at a quarter of six, Curtis, his woods-boss, rang in.

"They're staying here all night, sir," he reported.

"House them as far from the logging as possible and organize a poker-game to keep them busy in case they don't go to bed before eight o'clock," Bryce ordered. "In the meantime, send a man you can trust down to the locomotive to keep steam up until I arrive."

He had scarcely hung up, when Buck Ogilvy came into the office. "Well?" he queried casually.

"Safe-o, Buck!" replied Bryce. "How about your end of the contract?"

"Crowbars, picks, shovels, hack-saws to cut the rails, lanterns to work by, and men to do the work will be cached in your lumber-yard by nine o'clock."

Bryce nodded his approval. "Then I suppose there's nothing to do but get a bite of dinner and proceed to business."

Buck insisted on keeping an engagement to dine with Moira, and Bryce agreed to call for him. Then Bryce went home to dine with his father. Old Cardigan was happier than his son had seen him since his return.

"Well, sonny, I've had a mighty pleasant afternoon," he declared as Bryce led him to the dining-table. "I've been up to the Valley of the Giants."

Bryce was amazed. "Why, how could you?" he demanded. "The old skid-road is impassable."

"Not a bit of it," the old man replied. "Somebody has gone to work and planked that old skid-road and put up a hand-railing on each side, while the trail through the Giants has been grubbed and smoothed over."

"How did you discover this?" Bryce demanded.

"Judge Moore, representing the new owner, called round this morning. He said his client knew the property held for me a certain sentimental value, and so the Judge had been instructed to have the skid-road planked and the forest trail grubbed out—for me. It appears that the Valley is going to be a public park, after all, but for the present, it is my private park."

"This is perfectly amazing, partner."

"It's mighty comforting," his father admitted. "Guess the new owner must be one of my old friends. Remember the old sugar-pine windfall we used to sit on? Well, it's rotted through, but the new owner had a seat put in there for me, a lumberjack's rocking-chair. I sat in it, and the Judge left me, and I

did a right smart lot o' thinking. And while it didn't lead me anywhere, still I—er—"

"You felt better, didn't you?" his son suggested.

John Cardigan nodded. "I'd like to know the name of the owner," he said presently. "I'd like mighty well to say thank you to him."

Buck Ogilvy came out of the restaurant with Moira, just as Bryce, with George Sea Otter at the wheel of the Napier, drove up to the curb. They left Moira at her boarding-house, and rolled noiselessly away.

At nine o'clock they arrived at Cardigan's log-landing and found Jim Harding, the bull-donkey engineer, placidly smoking his pipe in the cab. Bryce hailed him.

"That you, Jim?"

"You bet."

"Run up to Jabe Curtis's shanty, and tell him we're here. Have him gather his gang and bring two pairs of overalls and two jumpers—large size—with him when he comes."

Harding vanished into the darkness, and Buck Ogilvy climbed up into the cab and glanced at the steam-gauge. "A hundred and forty," he announced. "Good enough!"

PRESENTLY the woods-boss, accompanied by thirty of his best men, came down to the log-landing. They clambered aboard the engine and tender, hanging on the steps, on the roof of the cab, on the cow-catcher—anywhere they could find a toe-hold. Harding cast aside the two old ties which the engine-crew had placed across the tracks as additional precaution; Buck Ogilvy cut off the air; and the locomotive and tender began to glide slowly down the almost imperceptible grade.

At the junction with the main line Buck backed briskly up into the Laguna Grande woods, and coupled to the two loaded flat-cars. The woods-gang scrambled aboard the flats, and forty minutes later they rumbled down Water street and slid to a grinding halt at the intersection of B Street.

From the darkness of Cardigan's drying-yard, twenty picked men of the mill-crew now emerged, bearing lanterns and tools. Under Ogilvy's direction the dirt promptly began to fly, while the woods-crew unloaded the rails and piled them close to the sidewalk.

Suddenly a voice, harsh and strident with passion, rose above the thud of the picks and the clang of metal.

"Who's in charge here, and what in blazes do you mean by cutting my tracks?"

Bryce turned in time to behold Colonel Seth Pennington leap from an automobile and advance upon Buck Ogilvy. Ogilvy held a lantern up to the Colonel's face and surveyed Pennington calmly.

"Colonel," he began with exasperating politeness, "I presume you are Colonel Pennington—my name is Buchanan P. Ogilvy, and I am in charge of these operations. I am the vice-president and general manager of the N. C. O., and I am engaged in the task of making a jump-crossing of your rails. I had hoped to accomplish this without your knowledge or consent, but now that you are here, that hope, of course, has died a-bornin'. Have a cigar." And he thrust a perfect under the Colonel's nose. Pennington struck it to the ground, and on the instant, half a dozen rough rascals emptied their shovels over him. He was deluged with dirt.

(Continued on page 347)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

BRYCE CARDIGAN and Buck Ogilvy are determined that that jump-crossing shall go in. Colonel Seth is equally determined that it shall not. A battle royal is in progress, Bryce and Buck having outwitted the Colonel by obtaining a franchise, the Colonel being the stronger, however, both in finances and because he is utterly unscrupulous.

Shirley fights fairly, and is just beginning to suspect her uncle's methods in protecting their joint interest. She has managed to maintain her friendship with Bryce and also with Moria MacTavish, his office aide, with whom redheaded Buck has fallen deliriously in love. Through Bryce, Shirley obtains a dictograph to overhear the secret conversation of her uncle and Mayor Poundstone.

Give a thought to Advertising

There's more to advertising than advertisements. What you see in the newspapers and magazines is only part of the business. A very important part, but by no means all of it. For it does no good to create a desire for any product with the buying public if they can't get that product when they go to their store. The dealer, the storekeeper must also be convinced of the merit of the product and also that there will be a demand from the buying public for it. So advertising falls into two main branches. The first is to persuade the dealer to stock the product and the second is to tell the public about the product's advantages so that they will go to the store and buy it.

Every week in the American Agriculturist you see advertisements of different products—lots of them. You see many things that you would like to have and decide to get the next time you stop at your store. The fact that the advertisement appears in the American Agriculturist is proof that the product's all right and this factor plays no small part in making your decision. But how would you feel if you went to your dealer determined to get this or that product and he informs you that he never heard of it, and doesn't stock it? Naturally you would be disappointed; you would feel in a way cheated. Probably you could send directly to the manufacturer and order the product, but that is more or less trouble.

The manufacturers who advertise in the American Agriculturist also are making efforts to sell their products to the dealers of New York State, both by advertising and with salesmen. But they don't reach them all. And that's where we decided to do our bit. For the aim of the American Agriculturist is to serve the farmers of New York State in every possible way. And if our readers see an advertisement in our columns of some product that they would like to get, we want them to be able to stop at their store and find it there.

So we decided to establish a new service. Sort of a handy man to help the Magazine itself. So every now and then we get out a little booklet which we appropriately call "The Hired Man." Its work is to do some of the chores that the American Agriculturist can't do itself. "The Hired Man" goes directly to the dealers in the State. It tells them which manufacturers are advertising in the American Agriculturist and the advantages of their products. In this way every dealer is advised before-hand of products that there is certain to be a demand for, because of advertisements appearing in the American Agriculturist. Then when a reader wishes to buy any of the things he has seen advertised, he will be more likely to find them at his dealer's. So, though "The Hired Man" doesn't go directly to our readers, still it is working for them all the time and is another evidence of the desire of the American Agriculturist to be of assistance to the farmers of New York.

Advertising Manager

The Passing of a Great Farm Industry

(Continued from page 331)

the young, women and children, the respectable and the riff-raff reported for the picking. Special trains brought in hundreds from the city. On the Pacific Coast the Indians, the Japanese and the Chinese did most of the work.

Some growers would hire only decent folks, and the harvest would be safe and sane. In other cases, most scandalous abuses occurred because of the social freedom of the "yard" and "house." When the day's work was over, the devil got his inning. The "hop digs," or dances, sometimes lasted until morning. Drinking was common. And at its worst, the hop-picking season brought brutal fights and murder. Men lost their sense of manhood and women lost their virtue.

At their best, hop pickings offered advantages. I personally know two couples, now long since married, who met in the hop yard and who have been happy and contented ever since. I know one woman who worked faithfully through the season in order to buy a set of false teeth that cost ten dollars. It was a source of cash income for many poor families.

The Material Side

A pile of money was spent on the crop. Setting the yard, buying the poles, the wire and string; grubbing, tying and cultivating; sulphuring, picking and curing; pressing and marketing demanded more expenditure than most any field crop you can think of. One grower said that his twine alone cost \$1,000. Often a grower would have invested several thousands in kilns, boxes, presses, etc., and more thousands in the new crop in the form of fertilizer and labor, and didn't know whether the price would be six or sixty cents per pound. In one case he stood a chance to lose a small fortune and in the other case to make one. One grower sent his sons to college on hop proceeds, and the checks they got from Dad depended on the market price of the season's crop.

The main reliance of the hop grower was the brewers' demand. It has been said that the Volstead Act caused a material loss of two billion dollars to brewers, distillers and saloon-keepers. No one has apparently thought of the millions lost to hop growers, who have sacrificed expensive yards, spray rigs, kilns and all that went with the industry. Often they themselves haven't thought of it in that way.

As a reliable source of farm income, hops have always been an unreliable crop. I have before me a list of 43 men who were intimately connected with hops. Here are some of their comments: "Just about come out even," "Millionaires one day and paupers the next because the money came all at once," "Took all the cows produced to pay the pickers," "Man that never raised hops came out ahead."

A writer has said in regard to fertilizing the crop: "The amount of manure should be all one can possibly afford, and then a little more." And that is just what they did; invested heavily in material and labor, spent a little more than they had and trusted to luck to come out ahead of the game. A few made money, but the great mass of growers lost.

The Moral Issue

How about the good church men, the elders, the deacons and the prohibitionists who raised hops to make beer? There was a moral issue apparent, and there were a few men who calmly refused to have anything to do with this crop, the acknowledged purpose of which was to give the deliciously bitter flavor to an intoxicating drink that was steadily growing in consumption. On the other side, there were apparently good Christian men who liked their bottle and who refused to let the left hand know what the right hand did. Many hop growers, I think, failed to consider the final use of hops. They recognized the crop as having possibilities for profit. They did not try to reconcile their feelings toward their industry and toward temperance. There were many who wouldn't drink and who wouldn't desire their children to do so.

No state in our country ever had so many hops as New York, and no county stuck to their raising with more stubbornness than Schoharie. Now those

glorious days are gone. Hop houses are going to ruin, the crows idly yield to the wind, the duster is rusting and the picking boxes falling to pieces.

From a material standpoint, we can rightly say that the loss of hops was not a real loss. In their place have grown up such parts of the farm business as dairying, potato growing, alfalfa culture, which are much more substantial and much less speculative. The hop industry was built on the sands and the irresistible flood-tide of public opinion washed it away.

Any industry of the world will sooner or later be measured by its contribution to the welfare or happiness of humanity. Weighed in this scale, hops were found wanting. It is sad to contemplate the fact that men gave their lives and fortunes to a thing that had no real usefulness in the world. The hop industry has fallen forever from its high estate, and few there are to mourn its fall.

Within a few years we shall almost have forgotten that hops once grew so thick that a man might travel for 40 miles and never be out of sight of a "field like a forest." There will be a few old folks to tell us stories of "hop-loops," and record yields and prices of a dollar a pound. There will be found a few stray vines in neglected corners near the woodlot. A vine or two may be trained at the rear of the farm house, and the product used for "hop tea." In its own language, the industry "hopped out" with great promise until the auctioneer of time and conditions struck it off with the words, "going, going off, gone."

The Valley of the Giants

(Continued from page 346)

"Stand back, Colonel, if you please. You're in the way of the shovellers," Buck Ogilvy warned him soothingly.

Bryce came over, and Pennington choked with fury. "You—you—" he sputtered, unable to say more.

"I'm the N. C. O.," Bryce replied. "Nice little fiction about the switch-engine being laid up and the Laurel Creek bridge unsafe for this big mogul."

"You've stolen my engine," Pennington almost screamed. "I'll have the law on you for grand larceny."

"Not to-night, at least," Bryce retorted gently. "Having gone this far, I would be a poor general to permit you to escape now. You'd be down here in an hour with a couple of hundred members of your mill-crew. You will oblige me, Colonel Pennington, by remaining exactly where you are!"

To Bryce's infinite surprise the Colonel smiled. "Oh, very well!" he replied. "I guess you've got the bulge on me, young man. Do you mind if I sit in the warm cab of my own engine? I came away in such a hurry I quite forgot my overcoat."

"Not at all. I'll sit up there and keep you company."

Half an hour passed. An automobile came slowly up Water Street and paused half a block away, evidently reconnoitering. Instantly the Colonel thrust his head out the cab window.

"Sexton!" he shouted. "Cardigan's cutting in a crossing. Get the mill-crew together and phone for Rondeau and his crew. Send the switch-engine and a couple of flats up for them. Phone Poundstone. Tell him to have the chief of police—"

Bryce Cardigan's great hand closed over the Colonel's neck, while down Water Street a dark streak that was Buck Ogilvy sped toward the automobile, intending to climb in and make Pennington's manager a prisoner also. He was too late, however. Sexton swung his car and departed at full speed down Water Street, leaving the disappointed Buck to return panting.

Bryce Cardigan released his hold on Pennington's neck. "You win, Colonel," he announced. "No good can come of holding you here any longer. Into your car and on your way."

"Thank you, young man," the Colonel answered, and there was a metallic ring in his voice. He looked at his watch in the glare of a torch. "Plenty of time," he murmured. "Curfew shall not ring to-night."

(Continued next week)

\$1,000.00 INSURANCE FOR 50 CENTS

As a part of our broad policy of service to readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for *American Agriculturist* all for only \$2.50—just 50 cents more than our special price for a three-year subscription alone.

You May Be Hurt or Killed In a Train or Auto Accident Tomorrow

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

This Tells You What the Policy Will Pay

The North American Accident Insurance Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

A Whole Page of Ideas For the Home Makers

Clothes, Health and Hobbies are all Considered, while Aunt Janet Talks to Older Women

A HOBBY, often recommended for the "tired business man," has an equal or greater value for the middle-aged woman. She it is who may become a hypochondriac unless some new interest comes into her daily life.

To many a woman of middle age has come her first vacation period in twenty or more years; her children are grown up and away from home, her house-keeping cares have greatly diminished, her busy earlier years have so shut her off from church and community activities that she must make a real effort to get back into the swing. Then, too, she has probably had little time for self-improvement or study.

Times change rapidly, and she, in her busy and confining home life, has not kept pace with events. This is the dangerous time, for her interest and attention are likely to be turned in upon herself. Without a new absorbing interest, she becomes self-centered and morbid.

Who Knows this Person?

We have all known such women, nervous, semi-invalids who enjoy talking of real or imagined ills. "I caught such a terrible cold last week, and it settled on my chest until I almost had pneumonia." "The doctor says I have kidney trouble, and bladder trouble, and liver trouble, and rheumatism, and sometimes indigestion, and that's enough for any one woman." "I'm taking two kinds of medicine now," etc., etc., ad nauseam.

Sometimes there really is genuine illness, but many times the aches and diseases are mainly fancied. The college-bred daughter, with a knowledge of psychology, may understand the situation and suggest a "mind cure," but poor mother only feels that she is misunderstood, and that daughter is unsympathetic, and draws closer in to her shell of self-pity.

To such women an absorbing hobby may come as a life-saver in very truth. All her life she has probably had some unsatisfied longing—to paint, to collect moths, or to study music. Only the other day an acquaintance confided, "I am a natural born poet, but had to leave school when I was in the fourth grade and never could study any more." Now, at fifty, she has the spare time. She is not very likely to become a poet laureate, but she will get an unlimited amount of pleasure from trying to write.

Try a Correspondence Course

No woman in possession of her faculties is too old to undertake some new interest. One middle-aged woman I know is part way through her third correspondence course. She is not only keeping her spare hours fully occupied with congenial work, but she has no time to think whether she feels ill or not. She is benefiting physically and mentally, and, incidentally, in a small financial way also.

A correspondence course has the advantage over a course of study undertaken unaided, of giving an outside stimulus which prevents one becoming discouraged and abandoning the work. The necessity of sending in lessons at frequent intervals and the inspiration derived from a bracing comment or word of praise from the teacher, will spur one on to continue, and even to attain, some prominence in the chosen line.

Consider What Others Have Done

"Oldsters" have many surprising possibilities hidden away under their gray-hair. George Eliot wrote her first novel while in her forties; Mrs. Amelia E. Barr was fifty and ill when she produced her first novel, and had written over fifty between that time and the age of eighty-seven. S. Weir Mitchell wrote three historical novels between the ages of sixty-seven and seventy-nine. William De Morgan took up literary work late in life, and produced four novels in the three years after he was sixty-seven.

Similar accomplishments could be cited in other lines of endeavor, and any woman, whatever her age, may well feel encouraged to start in at once on whatever has been her most cherished ambition.

Contentment will come and straddle the home ridgepole for aye!—VINCY PRESTON LOOPS.

QUICK ORANGE FROSTING

After baking a cake one day, I noticed a lonely orange on the pantry shelf, and I thought some orange frosting would taste good, so I made up a recipe which was so delicious that I am passing it on to others:

Boil together the juice of one orange and one cup of sugar until it hardens when dropped into cold water. Then pour it slowly into the stiffly beaten white of one egg, stirring all the time. Beat until smooth and spread on cake. If a stronger orange flavor is desired, add a little grated peel.

Before beating an egg white, I always add a pinch of salt and one tablespoon of cold water. This insures a quick whip, and nearly doubles the amount of white.—LULU A. CAMP.

A NOVEL SWEATER TO MAKE

A sweater especially designed to suit the older woman's figure is this, and it has lines which make it unusually becoming. The sleeves are comfortably loose; the skirt portion is pulled over

the hips, the waistline is low and marked only by a narrow drawstring belt.

The original sweater was made in blue, with gray angora trimming. Purple, black, a dull rose or dark gray would all be suitable for the sweater.

Directions for making will be sent for 12c in stamps. Address your order to Fashion Editor and ask for design E1.

Next week we will show one of the new sleeveless tuxedo sweaters for the younger woman.

AUNT JANET APPROVES OF HOBBIES

Dear Nieces:

What is a hobby and why?

That is a double-barreled question that farm women might well think over. Too many of us think of a hobby as the idle-hour pastime of some city millionaire—collecting Chinese vases or raising expensive toy dogs. A hobby need not be a costly luxury—indeed, it may be a veritable life-saver for the country woman as well as for her more leisurely city sister.

A hobby is simply a way of letting off steam. Steam which cannot escape explodes. Even children need a hobby; it may change as they grow older, or they may develop it along better lines. But usually we think of a hobby as the outlet by which some full-grown man or woman allows accumulating steam to escape.

Mrs. Loops—you will find her article

on this page—has some pertinent things to say about the especial value of a hobby to the woman just verging on middle life; the one who has perhaps lost the first enthusiasm of youth which transfigures homely tasks and not yet gained the philosophic calm of old age. She knows whereof she speaks.

What hobbies have you found fun and profit, too—you busy farm women who still manage to catch a few hours a week for that important outside interest? The rest of us would like to hear about your hobbies, big and little.

Yours,

Aunt Janet

IS YOUR CHILD BEING CHEATED

JEAN HENRY

Child Health Organization

PEOPLE first began to be civilized when they hit upon means of measuring things—wheat, oil, cheese, skins.

And with the bartering of so many pounds of this, for so many pounds of that, came two things into the minds of people. One was the desire to give as little as possible and the other was to get as much as possible. Since then the human race has been trying to keep itself honest. Those who buy have always had to check those who sell.

And in that way scales came to be one of the most important of the tools of civilization.

There are scales in the barn, scales in the kitchen, scales in the grocery, scales at the elevators, scales at the railway stations. No one takes another's word for the weight of the hay, of the sugar, of the flour, of the grain, of the cabbages. Every man is resolved not to be cheated, but—

Are there scales in the school house? Do you know whether your children are being cheated of life?

It is perfectly true that life and health can be measured in pounds. Accurate tables have been worked out showing just how many pounds Mary, aged eleven, should weigh for her height, and how many pounds Bill, aged eight, should weigh.

"Mary? Why, she's doing nicely," you think. "Of course, she hasn't been quite as round and rosy as her cousin of the same age over at Hillsboro, but she's at the growing age."

Just think a minute. Since Mary began to grow so thin last fall, haven't you noticed that she's terribly fretful at times? Remember what a good child she always had been. Now she quarrels with Bill and complains about helping with the dishes.

A Few Pounds Make a Big Difference

Just to look at Mary you would say she weighs ten pounds less than her cousin Sue. And those ten pounds that she lacks—what do they represent?

They represent her present health, her future growth, her mental development.

Is Mary to be cheated of these ten precious pounds?

Of course not, if you know about it. But how can you know whether Mary's weight is the proper amount for her height unless she is weighed regularly? Mary is growing rapidly.

If there were some one who would weigh the children regularly! It is so hard to attend to things like that at home. Why not the school?

If there are scales in every school where the children are weighed regularly once a month, you and all the parents of your district will know whether your children are being cheated of the abundance of life and health to which they are entitled.

Scales are truly one of the most important of the tools of civilization.

You can interest the other women in your district in putting into the school-house this all-important tool, and keep up the interest in its use. A mother and a father should be as keenly interested in the child's monthly weight increase as in his grade in arithmetic. Both may go up at the same time.

The children themselves will be absorbed in the game. When Mary steps onto the scales next month and finds that she is two pounds nearer "her

number," she'll begin to look forward with keen joy to piling her record up faster than the others month after month.

TWO SMART SPRING DRESSES

FIRST, a dress for the heavier materials, twill, or silk, or satin. The ever-popular navy blue or medium gray, with black trimming and a smart buckle to add style, would be excellent for No. 1645. You can make it with the flared sleeves and long front panel shown in the larger picture, or with the close sleeve and plain side closing illustrated in the smaller one. This

1645

pattern is excellent for its adaptability, as it can be used in a variety of ways, simple or elaborate.

No. 1645 cuts in sizes 34, 36, 38, 40, 42, 44 and 46 inches, bust measure. In the 36-inch size this style requires 3½ yards 40-inch material, with 1½ yards 32-inch contrasting. Price, 12 cents.

Then comes a frock of distinctly new design. The dropped waistline, popular "jacquette" closing and one-piece gathered skirt are all features of the new mode. No. 1718 is suitable for a cool figured voile, for a printed foulard, or for a gay Egyptian crêpe. Or it could

1718

be made of plain material and one of the new and riotous oriental designs used for trimming.

No. 1718 comes in sizes 16 years, 36, 38, 40 and 42-inch chest, bust measure. Size 36 requires 3¾ yards 36-inch material, with ½ yard contrasting. Price, 12 cents.

To Order: Write your name and address plainly, enclose 12 cents in stamps for each pattern ordered; send your order to Fashion Department.

Our Spring Book of Fashions, containing all the new models for the coming season, is ready. In addition to over 300 patterns, there are pages of embroidery designs, styles worn by movie stars, and dressmaking lessons to help the beginner. The price is 10 cents a copy. Address your order to Fashion Department, American Agriculturist, 461 Fourth Avenue, New York.

Popular Candy Recipes

Mabel F. Mitchell Gives Some Which Use Molasses

A FEW weeks ago we gave recipes on the use of molasses in cookies and bread. But it is perhaps even better used as an ingredient for delicious home-made candies, and the following recipes should be extremely popular.

Peanut Candy

One pint of molasses, juice of one-half lemon; one and one-half cups of peanut meats; one tablespoon butter. Boil the molasses, lemon juice and butter, and when it forms a hard ball in cold water, remove from stove and beat, adding the nuts. Cut in squares before real cold.

Chocolate Marshmallow Candy

One cup molasses; 2 ounces grated chocolate; 1 cup thin cream; $\frac{1}{2}$ teaspoon vanilla; $\frac{1}{2}$ cup brown sugar, or corn syrup; $\frac{1}{2}$ teaspoon soda; 1 dozen marshmallows. Boil molasses, sugar, chocolate and cream to the hard ball stage, then add soda and vanilla and beat thoroughly. Just before taking from the stove, add marshmallows, cut into bits, and let stand on the back of the stove until they are melted, then beat well. Pour into greased pan and when cold cut into squares.

Butter Scotch

One cup sugar; $\frac{1}{4}$ cup molasses; 1 tablespoon vinegar; 2 tablespoons boiling water; $\frac{1}{2}$ cup butter. Boil the ingredients until the crack or brittle stage. Pour into buttered pans about $\frac{1}{4}$ -inch thick, and mark into squares while still warm.

Sorghum Pop-Corn Bars

Two cups sorghum; $\frac{1}{2}$ cup thin cream; 1 pint popped corn. Boil molasses and cream to hard ball stage. Stir in the popped corn and mix well. Turn into a square or oblong pan well buttered, and press until flat on the top. Cut into bars when cold.

Plain Molasses Taffy

Two cups molasses; $\frac{1}{2}$ cup corn syrup. Boil to the crack stage, turn out into greased pan and when cool pull until light colored. Cut into various shapes with sharp scissors. Some add one tablespoon vinegar just before removing taffy from the stove. Others a half teaspoon cream tartar, which makes your candy whiter.

Pop-Corn Nut Brittle

One cup molasses; $\frac{1}{2}$ cup brown sugar; $\frac{1}{2}$ cup corn syrup; 2 quarts popped corn; 1 cup chopped peanuts. Boil molasses, syrup and sugar, to the crack stage. Stir in corn and nuts until all are covered with the mixture. This will sometimes press into shapes, and then be broken into various shapes and sizes, while at other times each kernel will be nicely coated. Good either way. This is also very nice poured over puffed wheat or rice, thus combining food with candy, and is good for the children. Marshmallows may also be dipped in this mixture and are delicious.

SAVE ON LABOR AND MATERIAL

Two neighbors decided last summer that it would be necessary to paint their homes. One house was colonial yellow, with white trimmings, and the other a white house with green blinds. In both cases the buildings were badly soiled and stained, but the paint itself was in fairly good condition.

Neighbor No. 1 tried an experiment. He hired a young fellow out of work to wash the outside of his house with soap powder, water and a scrubbing brush. As a portion was finished, it was rinsed with the hose. The results were so eminently satisfactory that Neighbor No. 1 decided that it was not necessary to spend a couple of hundred dollars in painting that year.

Neighbor No. 2, an energetic widow, employed the same young man to give the outside of her house a bath. The results were equally good. Both home owners then had a painter come and paint porch floors, steps, railings and pillars, and, presto! the houses looked so well that they will go through this summer nicely.

Paint saves the surface, and too

heavy a coating is not desirable. Each family estimates that they have saved about \$150 by the method described, for the next coat of paint will last so much longer.—EMMA GRAY WALLACE.

PRETTY PANSY FACES

Who does not admire the pretty pansy faces, with their varied markings? They laugh at us all summer long, in all climes and under all conditions.

Still pansies have very definite likes and dislikes. They like partial shade, coolness, and moisture. I have seen them growing in the hottest sun and blooming bravely, though the soil in which they were growing was poor and dry. This made them give small blooms, but they bravely did their best.

If you want big blooms of rich dark coloring, get a good strain and plant in a rich soil in partial shade, where tree roots do not sap the moisture. Give them plenty of water. They are like the violet, natives of woody vales, where the soil is deep and mellow, and moisture is abundant. To get the best results you should give as near these conditions as you can, but don't give up your pansy faces if you cannot, for they make the best of conditions as they find them. The earlier you sow the seeds the finer flowers you will have.—RACHAEL RAE.

OUR MEDICAL QUESTION BOX

Dear Dr. West:

I am badly troubled with my feet, having pain constantly under the toes. My mother and grandmother had severe foot trouble before me and this pain frightens me. Mrs. R. W. G.

Bathe your feet night and morning, and sprinkle the parts under the toes that are so sore with a little pulverized tannin. Give your feet deep-seated massage every night, using a little olive oil and pressing and rubbing the bones thoroughly in order to quicken the circulation of blood through all the tissues.

Always wear good whole stockings (by that I mean none that are mended), and the best of cushioned footwear with good heavy soles.

* * *

My hair is very thin and oily, with split ends. Would massage help? So far it has had no effect. Does this result from any other trouble? Miss W. H. F.

Yes, the general condition has great effect upon the hair, which, as you know, springs from the nervous system. In your case the oil glands of the scalp are overactive. I would suggest that you trim the split ends regularly every week or two, and that you rub into the scalp every night the following tonic:

Quinine Sulphate, $\frac{1}{2}$ dram; Chloralhydrate, $\frac{1}{2}$ dram; Camphor, $\frac{1}{2}$ dram; Oil of Cajeput, $\frac{1}{2}$ dram; Oil of Bay, 1 dram; Alcohol enough to make 8 ounces.

* * *

I suffer greatly from sick headaches, have a yellow skin, become very dizzy and have a blur across my vision. I am not able to go anywhere to spend the day without returning with an attack. Miss A. M. E.

Yours is a clear case of bilious headaches. You must be very careful of your diet. Do not partake of any foods containing white flour, any rich, heavy gravies, any made-over dishes. Confine yourself to bran and graham flours, to green vegetables (no potatoes, as they are too starchy). No tea or coffee, no dairy foods for the present. You may have lean meats. This seems a restricted diet, to which I will add an abundance of fruits, especially the juices of lemons, oranges and grape fruits. These juices have a particularly salubrious effect on the liver.

You should breathe deeply of fresh air all of the time, and should walk in every kind of weather from two to five miles daily, breathing deeply the while.

Wear some good gloves on your hands in the spring of the year when they are soft and tender, then you will not have the skin peeled off when you strike them unexpectedly.

Reviewing the Latest Eastern Markets and Prices

MAPLE SYRUP PRICES UNCERTAIN

HERSCHEL H. JONES

BECAUSE of the extreme lateness of the maple sap production season this year, it seems likely that the crop will be considerably short of last year and prices consequently higher. Up to April 1, no sap had been drawn in Vermont and very little in New York State except in southern counties. A few large dealers have offered prices on new run syrup and sugar, but practically no business in new maple products has been done, and future prices are very uncertain.

As usual New York City quotations have little relation to the market. Miscellaneous farmer packed syrup at the commission houses, old crop, is selling in a small way at \$1.60 to \$1.70 per gallon, in gallon tins, and sugar at 25 to 30c a lb. The practice of farmers in New York and Vermont, of shipping their syrup and sugar to commission merchants in New York and Boston is one of the biggest factors in keeping producers from getting better prices for their syrup. This ungraded product of irregular quality sells at whatever blended syrup manufacturers are willing to pay for it. Although undesirable compared with a uniform product such as that of the Vermont Maple Products Cooperative Exchange or Maple Producers' Cooperative Association of New York, it enters into direct competition with the standardized product. These two organizations in the two biggest maple producing states of the country are making a fight for better grading, packing and marketing of maple products that deserves the support of every farmer with a sap bush.

SWEET POTATOES UP SLIGHTLY

The severe weather around April 1, tended to check sweet potato shipments somewhat and make a better market. New Jerseys sold last week at \$1 to \$1.65 per bu. hamper, the top price going only to best graded stock.

GOOD DEMAND FOR POTATOES

Because of bad roads up-State and growers holding for higher prices, 80c @ \$1 per bu, the buyers in New York City are ordering potatoes from Wisconsin and Minnesota at prices ranging from \$1.90 to \$2 cwt. sacked, delivered. The market in the yards is steady and the dealers are optimistic.

Southern new potatoes are arriving in small quantities. Virginia Bliss Triumphs sold at \$8 to 10 bbl. Florida Spaulding Rose in double headed barrels sold generally last week at \$15 bbl for No. 1's. Bermudas No. 1's sold as high as \$22 per bbl.

Out of the 434 cars of potatoes received at New York the last week in March, 191 came from Maine, 71 from Long Island, 90 from New York State and 28 from Wisconsin.

States bulk per 180 lbs in yards sold at \$3.25 to \$4 and Maines, up to \$4.50 on April 6. Most of the shipments in the yards at end of last week were sacked western, showing a large amount of frost. The best of these sold at \$2 to \$2.75 per 150-lb. sack.

MORE SOUTHERN CABBAGE

Out of 77 cars of cabbage received at New York in the last week of March, only 11 came from New York State and 58 from Florida and South Carolina, 7 from California and 1 from Mexico. For really good old crop cabbage, however, the market was better the first week in April with prices at \$25 to \$30 a ton.

WESTERN APPLES HEAVY

Not only in New York City but right in cities in the heart of fruit growing sections, western boxed apples have lately been in heavier supply in trade channels than barreled apples. Out of 209 cars of apples received at New York the last week of March, 124 came from the West and only 68 from New York State and 17 from Virginia. The first week in April barreled apple receipts were also light and a large proportion showed scald and poor condition. The market was good for fancy barreled stock. Some of the Western winesaps of high color and attractive appear-

ance now on the market have about as much flavor as a ball of sawdust.

Wholesale prices barreled stock, A grade 2½ inch at New York April 5, were:

	Best	Fancy	Ordinary
Baldwins ..	\$5.75@6	\$6.25@6.50	\$4.50@5
Greenings ..	5.75@6	6.25@6.50	4.50@5
Ben Davis ..	3.75	4	3@3.50
N. Spy	11@12	12.50@13	

BUTTER ADVANCES AGAIN

In the middle of the first week in April, creamery butter went back up to the high level of two weeks or more previous. Creamery, higher score than extras, was quoted at 51½ to 52c lb., and extras at 50¼ to 51c on April 4, but on April 5 declined to 50 to 50½c for higher score and 49½c for extras, which was still about ½c ahead of the week previous. Whenever the top price reaches 51c there seems to be a check in buying and reaction down again.

New York has been just enough below the Chicago market to bring a large amount of out-of-town business, and shipments from here to other Eastern cities have been heavy. In addition to using up fresh receipts, the reserve stocks have been drawn on. On April 4

called a "speculative level," that is, to the point where speculative buyers see a prospect of making money by putting eggs into storage. Some of these speculative buyers have been willing to pay 28c doz. for storage-packed by the carload and 27½c for less than carloads.

Pacific Coast whites, extras, sold April 5 at 35 to 35¼c. Fresh gathered extras (Middle West and Southern) sold at 30 to 31c. Duck eggs, selected, at 42 to 43c per doz.; goose eggs, \$1 doz.

When you ship eggs in second-hand cases, be sure to remove all old markings of every description and pack with excelsior pads, new flats and fillers. Write your address plainly on the tags and state the number of dozen eggs in the crate either on end of crate or on a slip inside. It is safer to get tags from the receiver to whom you ship than to use cards of your own.

OVERSUPPLY OF LIVE POULTRY

New York was oversupplied with freight shipments of live fowls from the West last week. On April 5 prices were 5 to 7c lower on both freight and express shipments than the week be-

weak. Dressed lambs, poor to good, per carcass, \$3 to \$9, choice dressed hot-house lambs, \$10 to \$11.

Very little country dressed pork received and market dull.

WILL CONDEMN DIRTY CALVES

There has been so much complaint lately relative to the dirty condition of country dressed calves received at the West Washington Market, that the local Health Department has announced that hereafter such calves will be condemned and seized. Skins or hides have been muddy and dirty, and more or less bloody in some instances. Condemnation will mean that shippers lose not only the calf, but the transportation cost. It is suggested that after thoroughly cleaning the carcass, both inside and out, the skin on each side of the opening from the neck to the rump be drawn together by sewing with white cord to keep out dirt which may be gathered in transit.

LITTLE CHANGE IN HAY MARKET

Arrivals of hay at New York last week were not heavy and prices and conditions changed very little from the previous week. The market continued fairly firm, but it is the general belief that shipments will increase rapidly as the country roads get better. The quality of most of the hay received is very poor and "No. 1 Timothy" is practically unknown on this market now. There is always a real demand for better quality of hay. Clover and timothy mixed with a low percentage of clover has sold fairly well lately but will not be wanted when the weather is warmer.

Rye straw is unusually scarce and sells easily at \$30 to \$32 a ton. Some Canadian hay arrived lately but sold at discount because pressed too heavily. No Hudson River boat shipments as yet.

FURTHER DECLINES IN FEED

There were further declines in various feeds last week as shown by following prices per ton, in 100-lb. sacks, carlots Buffalo rate basis:

Gluten feed, \$40.55; Cottonseed meal, \$44.75; Oil meal, \$39; Dried brewers grains, \$49; Standard spring bran, \$33.75; Hard winter bran, \$34.25; Standard spring middlings, \$33.25; Choice flour, middlings, \$35.25; White hominy, \$32.05.
Corn advanced ½c. Rye declined 1c per bu. No. 2 yellow corn per bushel, 86¾c; No. 2 white oats, 53½c; Barley, feed, 72@76c; No. 2 Rye, 90c.

CASH GRAINS AT NEW YORK

The following were cash grain prices at New York, April 6:

No. 2 red wheat, \$1.49½; No. 2 hard winter, \$1.35; No. 2 mixed durum, \$1.27½; No. 2 yellow corn, 95c; No. 2 mixed corn, 94½; No. 2 white oats, 56c; rye, 93c; barley, 80@81c; buckwheat, \$1.86@2.10. At Chicago—No. 2 yellow corn, 76¼@77c; No. 2 white oats, 45¼@46¼.

Hogs, Yorkers.....	9@9 ¼	9 ¼

there were only 1,570,396 lbs. in public cold storage warehouses, or less than 25,000 packages.

It looks as though production would increase very gradually, due to the late spring, bad roads, etc.

EGG MARKET WEAKER

After the Easter trade was over, receipts of eggs fell off a little at New York, but the market became very weak and prices declined. On April 5 nearby hennerly eggs were about 4c lower per dozen than a week previous. Prices were irregular and unsettled. State eggs as they run sold in round lots at 30c per doz., with many sales at less. Some fancy Jerseys sold at 36c, but the best selected Jerseys brought 38 to 39c. The top price for fanciest State and other nearby eggs was 38c. On the same date last year the top price on nearby hennerly whites was 37c.

The total March receipts of eggs at New York of 980,934 cases broke all records. In the last 20 years, the nearest volume of March receipts to this year was in 1921, when there were 979,513 cases.

In spite of these heavy arrivals the movement into cold storage has been gradual. On April 4 there were only 105,543 cases in public cold storage at New York, compared with 217,234 cases same date last year. The total stored in the four largest markets was about one-third that of last year. Consumption of eggs increased enough this year, as prices went down to clean up the heavy March receipts fairly well. But a flood of eggs is expected this month, and prices tend rapidly toward what is

fore. Poor white Leghorn fowls had to be sold as low as 23c to move them. The holiday demand for fancy fat fowls practically ended with the Wednesday before Easter. From now on and during the summer, the demand will be greater for light fowls than heavy.

Express shipments of broilers were in larger supply, trade was slower and prices gradually declining. The White Leghorn spring chickens received have been mostly too small for the best trade, and best prices are paid only for those over 1 lb. each. On April 5 Leghorn broilers, by express, sold at 55 to 65c each; colored broilers, 70c each.

Rabbits, live, 30 @ 32c lb.; pigeons, per pair, 70c; guineas, 70c per pair; ducks, Long Island, 35c lb.; ducks, other nearby sections, 28 @ 30c; geese, 13 @ 15c lb.

LIVE CALVES IN GOOD DEMAND

In spite of fairly heavy receipts of live calves last week the market continued good for them due to active demand. Prime calves found a firm market, selling April 5, at \$15.25 to \$15.50 per 100 lbs.; fair to good, \$14 @ \$15; small calves, \$4.50 @ \$6.

DRESSED MEAT SUPPLIES HEAVY

The supply of medium-grade dressed calves was excessive last week, but there was no surplus of choice to fancy veals. Most sales on April 5 of fair to prime veals were in range of 10 to 14c, with a few selected at 15 to 16c. Common calves were very low, small veals going down to 3 to 4c per lb.

Dressed lambs were in heavy supply and very much lower, with market

Eveready Spotlight
with the
300-ft. Range

Everywhere on the farm, an EVEREADY FLASHLIGHT takes safety and convenience with you—instant light when you need it, right on the spot you want it

Ever grope around in a dark hay mow? Bother-some, and dangerous too! Why not avoid it with an Eveready Flashlight, and see where you step, and what you do? The reliable, handy, safe, portable light. No fire hazard. No naked flame, or spark. The only light that defies wind and rain.

An Eveready has a thousand uses on the farm. A single use may prove worth a thousand times its small price: \$1.35 to \$4.50.

There are 60,000 Eveready dealers trained to deliver Eveready service with the sale of Eveready Flashlights and Unit Cell Batteries; at electrical, hardware, drug, sporting goods and general stores, garages and auto accessory shops.

**EVEREADY
FLASHLIGHTS
& BATTERIES**

There's an Eveready Flashlight complete for every purpose from \$1.35 up to \$4.50

Plus Value Earns Mighty Welcome

Sweeping public approval everywhere confirms our belief that this car—decidedly the best Overland ever built—is the outstanding automobile value in the world today.

The new Overland offers you greater comfort and greater beauty—at the lowest price in its history. The body is all-steel, finished with hard-baked enamel. Triplex Springs (Patented) absorb road shock and prolong the car's life. The hood is higher. Body lines are longer. Seats are lower.

And you can depend upon the faithful Overland motor for smooth performance and the economy of 25 and more miles to the gallon of gasoline. Drive an Overland and realize the difference.

F. O. B.
FACTORY
1½ H. P.
Battery
Equipt

Make more money on your farm

"Time is money" on the farm today. Every farmer knows that he must make every minute count to get the most production and profit out of his place. You can save time—and "time saved is money made"—with a Fairbanks-Morse "Z" Engine.

This famous helper is now at work on more than 350,000 farms. At present remarkably low prices the 1½ H.P. Battery Equipt Model is the cheapest farm help any man can have. It does more work for less money than any other machine or man you can employ. It has been in such great demand all over the country that for many months the factory was unable to build enough of them.

Uses gasoline alone. Has high tension battery ignition, hit-and-miss governor and balanced safety flywheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value.

The magneto equipt 1½ H. P., 3 H. P., and 6 H. P. are real kerosene engines, but operate equally well on gasoline. Have simple high tension oscillating magneto. Throttling governor assures steady speed. Prices, F. O. B. Factory. Add freight to your town.

1½ H.P. \$71 3 H.P. \$105 6 H.P. \$168

Other "Z" Engines up to 20 H. P.

Write for complete details. See the engines at your dealer's.

School Bill Receives United Support

Organizations and Individuals Ask Passage at Large Legislative Hearing

AS announced last week, a joint hearing was given by the Senate and Assembly Committees on Education of the New York State Legislature on Wednesday, April 11, on the Downing-Hutchinson Rural School Bill. This bill contains the suggestions of the Committee of Twenty-one. There was an immense amount of interest in the hearing as shown by the large attendance of several hundred people who filled the Assembly Chamber.

The opposition to the bill spoke first. There were several speakers who voiced their objections to the proposed legislation. Most of them were rather vague, not making anything clear in their talks except that they were opposed to the suggestions of the Committee of Twenty-one and to the Rural School Bill. Several of these speakers discredited themselves and their whole argument with the audience, and particularly with the Legislative Committee, by attacking the sincerity and honesty of the Committee of Twenty-one and the leaders of the various farm and other organizations. A very good talk was made, however, by Mr. D. B. Devendorf, a farmer of Montgomery County, who voiced his objections clearly and courteously. Mr. Devendorf was particularly opposed to having the law passed this year.

We have never attended a legislative hearing where those in favor of the passage were as representative as those who spoke for this Rural School Bill on April 11. Mr. Albert Manning, Secretary of the Dairymen's League Cooperative Association, Inc., and Master of the New York State Grange, made it plain that the resolutions on education passed by the last State meeting of the Grange at Syracuse were, with one exception, exactly in accord with the proposals in the Rural School Bill. During the hearing, representatives of several Pomona Granges submitted resolutions passed by their Grange,

endorsing this legislation. Mr. Enos Lee, President of the New York State Farm Bureau Federation, said that this great organization of farmers was back of the School Bill and urged its immediate passage. Mr. N. F. Webb, speaking both for the Dairymen's League Cooperative Association, Inc., and the G. L. F. Exchange, of which he is now president, said that these organizations were in favor of the immediate passage of the School Bill.

Mrs. A. E. Brigden, President of the New York State Federation of Home Bureaus, read the names of representative women of the State who were present at the hearing from different counties and sections, sent there by women's organizations which they represented, to place themselves and their organizations on record in favor of this bill. Mrs. Brigden said that the rural women of this State are particularly interested in getting for their children better educational opportunities, that everybody knows such opportunities must soon be provided, and that the women are beginning emphatically to ask, "Eventually, why not now?" Mrs. Brigden was further supported in this statement by representatives of the League of Women Voters and by a representative of farm women of Dutchess County.

Mr. Peter Brady, an officer in the New York State Federation of Labor, urged the immediate passage of the Bill, saying that people in the cities fully realize that some of their best blood comes from the country, and that all would suffer if there were any lack of educational opportunities for country children. A representative of the American Legion stated that this organization urged the passage of the Rural School Bill, feeling that equal educational opportunity was one of the fundamental ideals of this country which members of the Legion had lately defended in the World War. Commissioner Graves of the New York State De-

partment of Education stated that he favored this bill because it was sound educationally and because it had originated with representatives of the people.

Mr. MacManus, a school district superintendent from Otsego County, in leading opposition to the Bill, stated that the district superintendents of the State were opposed to this legislation. A score or more superintendents who were present vehemently and emphatically denied this statement, stating that a majority of the superintendents of the State favored the Downing Bill.

Many other organizations and prominent individuals were present to give their support, including the New York State Teachers' Association, the New York State Agricultural Society, the Dairymen's League News, the American Agriculturist, Mr. Morgan Garlock, President of the Eastern States Milk Producers' Association, Mr. Jared Van Wagenen, Jr., a representative farmer of Schoharie County, and farmer delegations and individuals from many rural counties.

At the close of this hearing, there could be little doubt with the members of the Legislative Joint Committee, or with anybody else who approached the situation with an open mind, of the tremendous amount of representative sentiment throughout the State in favor of the immediate passage of this legislation. It is, of course, impossible for anyone to predict whether or not it will pass this year. The political situation which results in a deadlock between the Senate and the Assembly makes the passage of any law, no matter how desirable, extremely doubtful. The hearing was valuable in bringing out the great need for this legislation and the large amount of constructive support there is for it, all of which means that the bill is certain of passage either this year or next.

"Merchandise and Avoid Market Gluts"

Aaron Sapiro's Message to Empire State Potato Growers at Rochester Meeting

PRACTICALLY the entire meeting of the Empire State Potato Growers' Association held on April 11, in the Chamber of Commerce Auditorium in Rochester, was given over to the discussion of marketing of potatoes with Aaron Sapiro, counsel of several successful California farm cooperatives, holding the center of the discussion. His discussion of cooperative marketing of potatoes held the assembly of the 400 growers present, spellbound. He set forth the principles of cooperative marketing in a definite, concrete manner, leaving no doubt that cooperative marketing is a piece of real intensive high-powered business.

In opening the meeting, President K. C. Livermore of Monroe County presented in a concise way the main problem that faces the potato growers to-day. He said, "The lack of sufficient volume makes it difficult to operate at a sufficiently low cost to make the enterprise efficient. Therefore it is most apparent that a State-wide organization must be perfected, if orderly and profitable merchandising of potatoes is to be effected." Following the introductory remarks of Mr. Livermore, Mr. Sapiro was introduced and held the floor for the greater part of the remainder of the meeting.

In opening his address and before going into the discussion of the construction of the cooperative, Mr. Sapiro paid high tribute to the Dairymen's League Cooperative Associ-

tion, saying that it was one of the greatest cooperative accomplishments in the world, especially when there is taken into consideration the difficulty in handling such a highly perishable product as milk.

According to Mr. Sapiro, of all the cooperatives in California and the Pacific Coast, there are only two that have not been through the process of reorganization. Many have reorganized repeatedly, each time eliminating an undesirable feature and finally arriving at the ideal. Mr. Sapiro said: "There is no disgrace in failure. It is a disgrace to fail when we have the right plan before us to use as a basis. In organizing a cooperative, it is as essential to study failures as well as successes, for by eliminating those factors that allow failure we are able to eliminate just so much danger of ultimate disaster. No farmer should join the cooperative simply because his neighbor is a member or a neighbor wishes him to. He should join because he wants to."

The Aim of Cooperative Marketing

The aim of cooperative marketing was defined by Mr. Sapiro in just four words—"Stop dumping, substitute merchandising." To elaborate his idea he used the potato situation of 1922 in Maine. Early in the season forecasts of a huge crop were distributed among growers by speculators. Many of the farmers were scared into digging their crop early with the thought in mind that

they would be able to sell their crop and get "out from under" before the crash came. The result was a glut on the market. Even the speculators were over-flooded with the crop and in their haste to dispose of their holdings, less they suffer a loss, allowed themselves to be bid against and whipped-sawed by the consignment brokers who bid the crop down with the result that the market broke. Digging was stopped and 70,000,000 bushels rotted in the ground. Nothing more than a normal crop actually moved into consumption and it was this crop that moved into market that should have set the price. As a matter of fact the price was set by the crop that was dug as well as the 70,000,000 bushels that rotted, a price far below the cost of production. Had there been a clear-cut, thoroughly planned scheme of merchandising, the undug crop would have established the price and there never would have been a glut on the market. The surplus would have been rented out to other markets.

The Maine growers have now organized on a State-wide basis. Over 60 per cent who control over 50 per cent of the crop (a necessary factor in cooperative marketing) have signed long-term pooling contracts. They are going to grade their crop and make a study of markets. Hithertofore, Maine growers apparently considered there were only two markets for their potatoes in the whole world, New York and Boston. Under

The World's Greatest Scourge

Lord Robert Cecil Gives Suggestions For Ending War

"IN the first place, let me tender to you my warmest thanks for the kindness of your welcome, for this fresh proof of the hospitality so world famous of the American people. It is, I am sorry to say, the first time that I have had the honor of visiting this country, and it is a matter of profound pride and gratification that I should at last, after many disappointments, have the opportunity of saying something which possibly may be of use and of hearing something which I am satisfied will be greatly to my profit in intercourse with a great audience like this.

"I have many reasons for gratification at this opportunity. I am not one of those who have forgotten the comradeship of our two peoples in the great war. I shall never forget as long as I live that thrill of joy and happiness with which I heard the decision of the American people to take their part by the side of the Allies in that great struggle.

In the Critical Days

"I shall always remember the thrill with which we watched the American first battalion troops marching through London, and I shall never forget, nor will any of my fellow countrymen, the glorious deeds and magnificent services which the American Army rendered to that cause in those critical days of 1918. I remember well that my pleasure and our pleasure, I think I may say, was not only for the immediate assistance which you gave to us, but because we saw the dawn of a new era in which these two people should march together in the cause of peace.

"There have been, as Mr. McDonald has already said, many disillusion and discouragements since the armistice was signed, but I for one have not abandoned and will never abandon the hope that the great work of peace will ultimately be the accomplishment of the joint work of the American and British people.

"And, ladies and gentlemen, that is not the only instance by any means of cooperation between our two countries. There was just about a year ago completed the negotiations which resulted in the Washington treaties of disarmament. That was a very great thing. It was a concrete achievement in the cause of peace.

Should be Further Limitation

"It is quite true it applied necessarily only to naval matters, and was in the nature rather of a limitation than a reduction. It is quite true that it applied only to capital ships, and there are, I should imagine, you and I in this room who would have been very glad if it could have gone even further than it did.

"For our part, for my part, I should rejoice greatly if we could have a similar

limitation not only of capital ships, but of submarines and other craft also. All warfare is cruel and horrible, but in naval warfare I do not know anything which is more cruel and more horrible than the hidden attack of the submarine, made without warning, made without discrimination, an attack which may send to their death not only the troops and combatants, not only the men of the opposing party, but women and children also.

"War is a horrible and devilish thing,

war attacking from the air was for the first time made a practical thing in warfare. We all remember—we at any rate on the other side of the Atlantic remember—what bombing from the sky really meant. We have a vivid recollection of great explosives falling indiscriminately in the most populous and peaceful of our cities, slaughtering without discrimination every kind of human being, destroying the most harmless and the most helpless just as readily as those who were fighting in the field. What was done in the late war is but a pale shadow of what will be done in future wars.

Shall We Commit Suicide?

THAT is what Rome and all the other ancient civilizations did because they insisted upon making war. This is the thought constantly emphasized by Lord Robert Cecil, England's chief exponent for permanent peace.

"In my judgment," says Lord Robert, in his first speech to an American audience, "we have come to a great crisis in the history of humanity. The nations must either learn or perish. That is the truth; that is the dilemma; that is the issue that is laid before all of us, wherever we live, whatever our station in life, whatever our political or social aspirations."

Farm people especially will be interested in Lord Robert's argument for the end of war. Therefore, we take pleasure in passing all of his speech on to you on this page that space will allow. This will be followed in an early issue by a brief outline of just what the League of Nations is, how it is organized, and what it proposes to do, and later we will explain the plan for a World Court. If you like these simple, clear explanations of the great world problems of such vital importance to us all, let us know, so that we may continue them.

—The Editor.

and when nations under the stress of that experience, are at death grips with one another, when their whole future and existence depended on the result of the struggle, it is too much to expect that any paper regulations will limit or humanize the means which they employ; and if we doubted it, the experience of the late war is a terrible warning to those who think that there is any means by which you can make war more tolerable. The only thing is to prevent its happening. That is the only security for humanity.

Need Reduction in Army and Air

"Ladies and gentlemen, in addition to naval disarmament, perhaps more urgently even than that, we require ultimately disarmament, immediate reduction in armament both by land and by air. After all, in some ways land armaments are more destructive to peace, more dangerous to humanity than armaments by sea. You cannot invade a country with a fleet. That can only be done by infantry. You cannot make—at least it is not very easy to make—at the life of a country by a fleet. That a sudden and unforeseen death-stroke is the work of a land army attacking without provocation and without warning, and if that is true of a land army it is even more true of the air.

"You know—we all know—that in the last

for just as the extent of the damage to be done has grown enormously so also has the range of attack, and it is no wild idea that in the near future it will be as easy to send airplanes across the Atlantic as it is now to send them across the Channel. Ladies and gentlemen, this, if it stood alone, would be surely a strong call to the peoples of the world to set their house in order and make a determined effort to limit these agencies of destruction before it is too late.

"In my judgment, we have come to a great crisis in the history of humanity. I agree with what my countryman, Lord Gray, said the other day, the nations must either learn or perish. That is the truth. That is the dilemma; that is the issue that is laid before all of us, wherever we live, whatever our station in life, whatever our political or social aspirations.

A Lesson from the Ancients

"I had the honor of crossing the Atlantic in company with a number of your fellow citizens, who were returning from a visit they had paid to Egypt to see the marvelous discoveries which have recently been made in that land. And they spoke to me with great interest and enthusiasm of the astonishing degree to which the ancient civilization of Egypt had been perfected. There were others who had been to Crete and told me

VOL. 111 April 21, 1923 No. 16

A Good Suggestion

SENATOR STRAUS, Chairman of the Senate Committee on Agriculture, has introduced a resolution into the New York State Legislature calling for a joint legislative committee to study marketing conditions. In the language of the resolution, this committee would determine whether our present laws designated to promote and encourage cooperative marketing are adequate for the purpose, and investigate to what extent government cooperation may be desirable for the erection of warehouses, the establishment of markets, and the dissemination of accurate information among people in the cities as to conditions on the farm. The committee would also be authorized "to investigate whether the great barge canal, on which the State of New York has spent over \$150,000,000 may be utilized for bringing foodstuffs from the farming districts to the cities." If appointed, the committee would consist of three members of the Senate and three members from the Assembly. The resolution calls for an appropriation of \$15,000 to be used in the investigation.

We believe that such a study would be well worth while. To be sure, there have been so many investigations of farm conditions that farmers are rather skeptical as to any good that can come from any new one, but there is large opportunity for a committee to make a real study of present marketing conditions which could result in much good to both producers and consumers. Dairymen will remember the Wickes Legislative Committee which made a thorough study of the milk marketing situation in 1916. The facts found and published by the impartial Wickes Committee did much to secure the support of public opinion for the dairymen in their fight for better prices for their milk.

We heartily agree with Senator Straus in a statement he made in regard to the market situation in connection with his resolution asking for a legislative committee to study farm marketing. Senator Straus said: "It is an absurd situation when one comes to consider it, that Oregon apples, produced

over two thousand miles away, are able to compete right here in our own city markets with New York State apples, produced fifty or one hundred miles away, nay, more; that while Oregon apples are selling in the markets of New York State, at that very time, New York apples are rotting on the farms in the neighborhood of the city, because it does not pay the farmer to pick them. Scientific agriculture is solving the problem of an adequate production of foodstuffs. It is time some consideration was seriously given to solving those problems of marketing without which even the finest crop results in neither increased profits to farmers nor cheaper foodstuffs in the city."

Getting the Farm News

WE call your particular attention to the real farm news in this issue of American Agriculturist. As we have stated many times, we believe it a fundamental purpose of any farm paper to get to its people the news of farm and other affairs in which farm people are interested, written and interpreted from the standpoint of what bearing such news has upon farm conditions.

Illustrating how we are carrying out this thought, notice in this issue the account of the legislative hearing held in Albany on the Downing-Hutchinson Rural School Bill. We sent a representative purposely to Albany to attend this hearing. We also have a special Albany correspondent who furnishes us for your benefit up-to-date legislative news. The same is true of Pennsylvania and New Jersey. In this issue there is an extremely important account of a big meeting at Rochester, of the potato growers who were addressed by Aaron Sapiro, the great farm cooperative enthusiast. Mr. Ohm, our associate editor, made a special trip to Rochester to report for you what took place at this meeting and Mr. Sapiro's leading remarks. This issue carries an account of the most recent meeting of the Maple Sap Producers' Association. We had a representative present at Syracuse who gives you on another page the market situation of maple syrup and sugar as reported at this meeting. Another representative of American Agriculturist reports this time the last meeting of the Cooperative Council, representing all the commodity cooperatives in New York State.

All of this is special news material in addition to that which is furnished by our regular correspondents scattered all over our great territory. It is, of course, costing us a lot of money in salaries and traveling expenses to obtain this news service, but we think it is what you want. If there is any way in which we can improve this service, won't you tell us how?

The Servant is Worthy of His Hire

MRS. ROBERTS' article on the country doctor in our March 17 issue, attracted considerable attention. Some of the good letters that we received from our readers giving suggestions for keeping physicians in the rural sections are printed on the opposite page. We particularly noticed that most of these letters called attention to the need of paying the doctors well for their services. With this thought we heartily agree. We know from our own experience how hard money comes to most country people, but it is no more than human nature that if doctors can get much more money in the city and can collect that money more promptly, the city will be where they will go.

Along this same line, we have before us a letter from a member of our great American Agriculturist family which says, "I have been secretary of our church pulpit committee for some months and we are finding it hard to get a minister to come to the country

to preach. I have corresponded with over thirty-five ministers and one would not expect from men of their profession the questions they ask such as, electric lights, State roads, hard-wood floors, baths, distance to railroad, etc."

We do not agree with this sentiment. We think that men who have spent years and a good deal of money to properly train themselves professionally have a right to demand and expect reasonable modern conveniences in their homes. Even if they are willing to make great sacrifices themselves, they must consider whether or not they should put themselves into a position where their children must sacrifice, too, in advantages which they otherwise would have. It is strange how all of these country problems go back to a question of dollars and cents. We have often said that if farmers could get better prices for their products, they would take care of all of their other problems. They could then pay for teachers, ministers and doctors so that they would feel that they were servants worthy of their hire, and have no desire to leave for other fields.

Support the Fruit Exposition

PLANS are developed for the Eastern Fruit Exposition to be held in New York City next November, which bid fair to make this the largest and best fruit show ever held in the State. All of the New England States with New York and Maryland have definitely decided to participate in the show. Other Eastern States are expected to take part.

It is time eastern growers awoke to the necessity of advertising eastern grown fruit in our big cities and this proposed apple exposition, featuring eastern fruit, will be a real step in bringing our fruit to the attention of city consumers. An appropriation of \$30,000 has been asked from the New York State Legislature to enable the State to take an adequate and worth while part in showing its fruit at this exposition. This appropriation should be granted.

A Word for the Country Town

SEVERAL books have appeared in recent years which libel and misrepresent people and conditions in our small country towns. To such books we take considerable exception. To be sure, small town people gossip, and gossip at any time and any place is an evil thing, but we do not know that it is any worse to talk about one's neighbor over the backyard fence than it is to read avidly the last sensational word of the latest murder or divorce tale that fills the front pages of the city daily newspapers.

To be sure, there are those in the country towns who have more than their share of narrowness, selfishness and prejudices, but human nature is the same everywhere and there is about so much devil in all of us, no matter where we live. If evil does not show up in city folks in the forms that it does among rural residents, it is likely to make some other and equally bad manifestation.

Small town folks and those who live on the farms have, of course, their faults, most of which are the results of a life-time of contending with small, but irritating and narrowing affairs. Nevertheless, all of the modern novels to the contrary, when it comes to the final showdown, we hope our chances will be as good as the majority of those who live on Main Street.

We have often thought of the people who live in the rural neighborhoods and small towns as like one great family, knowing one another's faults, perhaps talking about them too much at times, but always standing shoulder to shoulder with one another in times of sickness and trouble.

Wanted! A Resident Country Physician

Good Roads, Prompt Pay and Appreciation Will Keep the Doctors

BEING country bred, and with nursing ability, I frankly admit that the life of the average country doctor is anything but one "grand sweet song." Although, I venture to say, the extent of his popularity and success depend largely—if not entirely—on the character and personality of the man who bears the title of M. D. As in every line of business, there are many types and classes. Too many of our present day doctors are too "classey," too scientific and unadapted to country life and people, and enter the profession merely from a cold business point of view. Seldom do we find one of so rare a combination of professional skill, refinement and kindly sympathy and friendliness toward all with whom he comes in contact.

There are however, many discouraging problems, many demands under which the country practitioner is expected to labor. Bad roads, together with financial difficulties not only seriously handicap, but oftentimes prevent him from doing all he might be capable of. Yet this friend to humanity must never complain, never be sick or need a vacation, but always on tap to serve an inconsiderate public, with but few exceptions.

Then, too, one must remember that the attitude of the patient plays a most important part. When your condition necessitates the calling of the doctor, say to yourself, "I am going to get well!" Play the game fair and take up the task on a cooperative basis, with all confidence in your physician. Last, but not least, pay him promptly and cheerfully and never by word or action convey the impression that he is just a necessary evil. But rather, encourage and send him from your bedside with a hope in his heart and the pleasure and reward will be yours.—MRS. ROBERT F. WEEKS, Babylon, N. Y.

We Need a Resident Physician and a Community Nurse

THE country district needs a resident physician. Few country districts have them. There is something terrorizing about being sick in the country in winter, for one is so uncertain about obtaining a doctor. The city physician as a rule keeps only cars and they are very loath to come into the country in bad winter weather.

We live within five miles of a city of 31,000 population and there are many doctors practicing there. In summer we can get a doctor, but in winter we never know whether we can or not. We are unfortunate in having been sick a great deal, probably we realize the acute shortage of country doctors more than normal, healthy families. We keep our telephone chiefly for use in calling a doctor in case of illness, but it wouldn't avail us much in the midst of winter. I know many people in poor health who have been obliged to stay in town during the winter to assure medical treatment.

If every rural district had a doctor it would banish one of the very worst disadvantages of living in the country. The country districts want first-class physicians of the same high type of training of which the city physician boasts. If we can obtain a high type of medical man we will pay them the same as we pay our city doctors and we won't begrudge the money either. We don't expect something for nothing.

There is much demand for medical service in the country. There would be greater demand if it could be fulfilled. Surely it seems as if a country doctor could make as good a living as a city physician. There would be a broad field open in the country in connection with medical inspection for our schools.

By OUR READERS

We want and need it the same as the city schools. This means another source of revenue for the doctor. A public health nurse could be provided to work in cooperation with the doctor and thus make his work easier.

It would be a splendid thing if every community had its own hospital. Many small villages are beginning to realize this need and supply it. Why not the country district? Many people have a prejudice against going to our city hospital. If they had one nearer home, in the management of which they were interested and which they felt was really their own, they would feel much differently. A hospital in the section where he practiced

TELL the Doctor if he's helped you,
Let him hear your praises now.
Do not wait till hands are folded
And like marble is his brow.

Give your sunshine to the living
Not alone in words, but deed,
Prove yourself a friend in trouble,
Help and cheer in time of need.

Give your sunshine to the lonely,
Scatter blossoms 'long the way,
And your life will be the brighter,
Pure and sweet in every way.

—Mrs. Robert F. Weeks, Babylon, N. Y.

would greatly facilitate the work of the doctor. There is no reason why a country doctor may not keep up-to-date and have the benefit of association with his city brothers in the profession.

A great many things can be done to aid the country doctor as I have pointed out. The financial gains should be ample to satisfy a doctor and the country public could cooperate with him to make his work easier. Finally a resident country physician can fulfill a great humanitarian mission to the farmers because of the isolation of the country districts.—S. GWENDOLYN SPINK, Watertown, N. Y.

Build Decent Roads

WHEN you asked how to hold the country doctor, I asked myself "What are country doctors made of." And I thought, they are born or else brought up from the cradle under the motto "all that I am and all that I have, I give freely to my fellowman," or sometimes he has had a true vision of the Christ. They are the most unselfish of men as well as the most courageous. Then all we have to do to hold them is to build decent roads for them to travel on and they'll come at any hour of the day or night, regardless of weather. Doctors are generally like this, but occasionally in the city you'll find one more like a politician than anything else.

He can't afford to run the risk of spraining his horse's legs or breaking his buggy or wrecking his machine, for maybe he has a family and can't afford to be extravagant or reckless. Besides, he doesn't want to have a lame horse or repaired vehicle any more than we do.

Then when he names his price, pay him cheerfully, or promise to if you haven't it at hand and after that when you meet him or hear his name mentioned, feel in your heart that you still owe him—that money cannot pay the debt.

Don't think because he's so jolly and genial that he hasn't an ache or a pain. He may have a headache that nothing but sleep and

rest can cure rightly or his body may be dead tired and aching because of long hours and irregular meals. So make everything as easy for him as possible and as pleasant, for he may have troubles, too, and just puts on that happy look to help you.—MRS. WALLACE D. SWISHER, Newark, Ohio.

Should We Subsidize the Doctor?

MY message is from a hill country, hills that are almost young mountains where the snow drifts deep in winter and stays late in the spring. The roads follow the least drifted places through meadows, across fields or through woods.

Our middle-aged doctor, who is all that Mrs. Roberts in her article in your paper said a good doctor is, often remarks: "If folks would only open the roads." That would be one great attraction at least in winter. The summer roads are not to be dreaded.

If there could be a certain sum set aside by each locality, a sort of salary, paid weekly or monthly under the head of the Health officers' pay, the young doctor would have something to tide him over the lean times, until he could build up a practice. Young men leaving medical college often are in debt, for money they borrowed to help them through the last of their course. That same course costs with economy \$5,000.

In rural sections they must furnish their own medicines as it is often many miles to an apothecary. A prompt payment for office or house calls is an attention much appreciated, so often neglected. If we would answer the doctor's questions frankly, thus aiding in a rapid and thorough diagnosis and not expect the service to be of a mind-reader as well as of a thermometer and disease aiding in our rapid recovery, it would be another encouragement.

What pleasure we can give our doctors if they can feel they are heartily welcomed in our homes, with the same respect we give our ministers, lawyers or teachers, or any cultured person. They must deal with moral wrecks as well as the pure minded and treat all fairly. How easy it is to start a scandal that has disgraced more than one innocent doctor, and burden his mind so that some have thrown up a growing practice to put miles between them and the pain of bearing a ruined character thrust on him, by the ignorance of depraved minds that hold little good.

Don't be stingy of the thanks and praise, show a full appreciation of our medical aid. Heartfelt thanks make bright spots in any one's life, especially a hard-worked doctor whom it is so easy to blame for faults that are generally our own.—WINIFRED W. SHORE, Oxford, Chenango County, N. Y.

Thinks a Country Nurse Would Help

YOU have asked for practical suggestions concerning the country doctor. Years ago all the small country towns and even hamlets had a resident doctor. If the young doctors are not locating in these places at present, it goes to prove that something must be wrong with the people that go to make up our population in the rural districts.

First the condition of our roads have something to do with the young doctor locating in the city where he can run that new car of his over paved streets instead of our almost impassable country roads. I know some one will say that we are spending millions of dollars to build paved roads in the country. I think this is as it should be for

(Continued on page 358)

Invest in a McCormick-Deering Manure Spreader for More Profitable Farming

The basis of profitable farming is a fertile soil. In farming, as in other businesses, there are poor years and good ones, but the farmer who keeps up the productivity of his soil will forge ahead.

No method of maintaining soil fertility has proved so efficient as the proper application of barnyard manure. It is a foresighted policy to build up crop yields with a McCormick-Deering Manure Spreader. Put manure on your fields finely, evenly, uniformly, and economically; the extra fertility will in a short time pay for the McCormick-Deering spreader.

Note again these features in McCormick-Deering construction: 1. Power delivered from both wheels. 2. Double ratchet drive with six feed speeds. 3. Short-turn front axle—no pole whipping. 4. Rear wheels track with front wheels. 5. Tight bottom. 6. Two beaters and wide-spread spiral. 7. All-steel main frame.

Serving New England, New York and New Jersey

An Unsolved Problem!

Abortion Still Baffles Our Livestock Men

I HAVE received a most interesting letter from Mr. Sam Patch of Oneida County, N. Y., in which he brings up one of the biggest problems the dairy-men have to face to-day. His letter is as follows:

By H. E. COOK

"I read in one of your articles some time ago that the greatest trouble

H. E. COOK

you have had in your herd was with abortion and failure to breed. Now, I have run into that same trouble for the past three years. I have been having from two or three cows lose their calves after they have carried them from five to six months. I keep them from the bull four or five months, and then breed them. Last week I lost a calf from a five-year-old registered cow that had been bred to a very fine registered bull that has never done service outside of the herd he has been in, and was held for \$100 service. She carried the calf for six months. I am a milk producer, and want most of my cows to come in the fall, but this year they are coming in at all times. The cows all seem to be in perfect condition. The barn is new—I built it three years ago, putting in all modern improvements, drinking bowls, etc.

No Fault in Treatment

"THE animals are curried every day and get exercise twice a week if the weather is right. We feed silage, clover hay, oats on the straw—grains and oil meal. The cows are never abused, and are not allowed to fight. I would appreciate it if you would let me know if there is anything to be done. I would also like to know how long, in your opinion, it is safe to breed a cow after she has lost her calf. Is there any truly perfect abortion remedy?"

If I could answer that letter my reputation or fortune would be made. Losses from the causes mentioned are probably greater than from all other sources combined in the dairy herd. I have never been perfectly free from it in some form, and this year has been the worst of many. The stages are from a failure to breed along to calves that are dropped alive. Now the rules call for immediate segregation, which we obeyed for a time, say 20 years ago and back of that for 20 years, but I found the plan a burdensome one without the apparent advantage our authorities claimed.

I have no hospital artificially heated, and it would be a case of cruelty to animals to put them in the winter where they would nearly freeze. We do not keep them in our certified herd until they are clean and normal again, and that is usually for about four weeks, feeding their milk to calves. We do, however, daily flush out the uterine passage, using from 8 to 10 quarts of water, to which is added disinfectants and a bit of salt. We have a pump with a rubber hose attached that reaches nearly to the uterus.

Disinfection is Thorough

THIS treatment prevents odor and is also a germicide. In addition to this treatment, we wash the rear parts of the body with the same solution, including the tail. It is no burden to do these things, because we are all of us trained in cow washing, a very necessary part of clean milk production. From the beginning I have been educated to breed the cow only after three or four months has elapsed, which is, I think, sound practice, and yet I have had cows bred within one month and produce a full-time living calf.

Investigators for a time were sure that the abortion germ was responsible until Dr. Smith proved that it might be and might not be. Other germs were found present also that may have some effect. We were taught for a time that infection was carried by the bull. Authorities believe now that such

is not the case. We followed the practice for several years of disinfecting the bull before and after service. I am not sure we profited thereby—abortion has not been more prevalent among cows purchased than among those raised on the farm. More young things seem to be infected than are the older cows.

It is our practice to both dispose of them and keep them. If they are inclined to fatten and to dry off, they are sold otherwise; if they are better than the average in milk and butterfat, they are kept. Our veterinarian has given the ovarian treatment to a considerable number that failed to breed succeeding in more than half the cases.

An Unanswered Problem

BASING a summary upon what I read and my own experience, there is no agreed-upon cause and no specific to apply. We are safe, and probably good results come from douching and keeping the cow thoroughly washed and others near her with disinfectants. Keep the good cows if they milk fairly well and sell others and wait till somebody finds out a cause and remedy.

I have had a theory for a long time, which can be taken for what it's worth. A cow has two main functions—one to reproduce and one to give milk—each drawing heavily upon her vitality. The one main object of our breeding is to develop the milk-producing function and resistance to physical weaknesses resulting therefrom. But we have not studied how to strengthen the reproductive organs.

It is a well-known law of plant and animal development that the development of one part of function long continued has a tendency to weaken other parts. This law taken in connection with reproduction so delicate and the least understood of any bodily function, makes it possible to conceive that this theory might have some weight. Furthermore, a general weakness of these organs fits into the present theory that there may be more than one cause. A weak animal or plant, or person, or organ always becomes a prey to destructive bacteria or agencies, whatever they are.

Wanted! A Resident Country Physician

(Continued from page 357)

those of us that live on one of these roads surely cannot sound our praises high enough for them. We cannot all live on these paved roads, we must think of the many by-ways that lead to these paved roads.

We live in a country where the health officers and milk inspectors are on the job when it comes to looking after our dairy herds, sanitary condition of the stables, etc. I am not finding any fault with this. I believe they should enforce these laws, but we have some very unsanitary condition existing in some homes that should be investigated. I wonder what the score would be if there would be a home inspector come and look after the sleeping quarters of some homes that have come under my observation.

If every community were to have a visiting nurse to cooperate with the country doctor, his work would be easier and more effective.

Then I think of another way. We read in the Great Book that we should "bear one another's burden." If it is not clear to us how we may be able to do this, turn your attention to that strong passage in James 5:16 "The effectual fervent prayer of a righteous man availeth much."

In conclusion I would say we may help our country doctor by building better roads, better organized communities to look after the sanitary condition of every home, a wide awake visiting nurse and Red Cross organization. Last, but not least, more good old-time Christians that believe and practice prayers. —MRS. EDNA WHELOCK, Union, Ohio.

I think your paper is better than last year. It is all right.—Delbert Dick, Troy, N. Y.

Eastern Apple Growers Meet to Consider Further Plans For Exposition

HERSCHEL H. JONES

THE Eastern Apple Exposition and Fruit Show plans are progressing very encouragingly, as evidenced by the large and enthusiastic attendance at the meeting held in New York City April 10 of the General Committee of fruit growers, agricultural department officials and others who are promoting this project. There were about 40 representatives present at the conference from Massachusetts, New York, Vermont, Connecticut, Rhode Island, Pennsylvania, Maryland and New Jersey. Some of the States have not yet succeeded in getting appropriations to enable them to complete final arrangements for exhibiting their fruit at the exposition, but enough of the Eastern States are ready to go into the campaign to advertise Eastern fruit to make its success assured.

The plan for an Eastern Apple Exposition to be held in the Grand Central Palace from November 3 to November 10 next fall was developed several months ago at a meeting called in New York City of large Eastern fruit growers and representatives of agricultural departments, colleges of agriculture and other institutions concerned with fruit industry in the eastern United States.

The Apple Exposition is intended to be the center of an extensive advertising and publicity campaign for the purpose of bringing before the public the superior quality and flavor of Eastern fruit. Incidentally, those who are supporting the proposed campaign expect that one of the principal results which will be accomplished will be the education of the farmers themselves in the East to a better appreciation of what the buying public wants, and to better packing and grading of their fruit. In competition with the perfectly standardized and efficiently marketed apples from other parts of the country, the Eastern fruit has been crowded to a considerable extent out of its own best markets.

While it will not be the purpose of the proposed show to discredit in any way the fruit from other parts of the country, it is intended to familiarize the consuming public with Eastern fruit and fruit products, and to encourage the Eastern fruit growers to advertise their products more extensively and improve their methods of marketing.

The State Horticultural Society in Massachusetts has undertaken to raise the funds itself for putting on a large exhibit of fruit from that State. Some of the large commercial interests have agreed to put up a dollar for every dollar the growers themselves raise for this purpose. Vermont has already secured an appropriation from the Legislature to enable it to make a strong showing at the exposition. The New York State legislative appropriation is still pending in the Legislature, but the cooperative organizations and individual growers throughout the State have shown great enthusiasm for the campaign.

The cooperation of the public schools, women's clubs, consumers' organizations, trade bodies, civic associations and all sorts of organizations in New York City is being secured for this exposition. It is planned for each State to have a quantity of its own apples at the exposition to give to the thousands of school children that will attend. Consumers, who are interested in buying apples direct from the producers, will have an opportunity to place their orders at the show and even to buy the fruit there to take home with them. In addition to apples, there will be exhibits and demonstrations of maple syrup and honey produced in the Eastern States.

The next meeting of the General Plans Committee, of which Thomas E. Cross of Lagrangeville, N. Y., is chairman, will be held June 1, or earlier, dependent on how soon some of the States are able to secure appropriations from their legislatures.

Among the New York State fruitmen present were Thomas E. Cross of Lagrangeville; C. R. Shons, Washingtonville; Kirby Lewis, Red Hook; Mr. Hubbard of Hudson, and Mr. Van Buren of the Department of Farms and Markets.

SOCONY MOTOR OIL for TRACTOR LUBRICATION

Tractor Insurance

It requires a special oil to stand the high operating heat tractor engines develop. Only a lubricant made for tractor use can insure steady, dependable work and afford suitable protection against destructive friction.

Socony Motor Oil is a special oil that stands the high cylinder heat—doesn't break down and run thin—keeps compression right. It oil-cushions cylinders, valves, and bearings, with a protecting film that insures satisfactory operation at the least annual cost for overhauling and repairs.

The Socony Motor Oil chart will tell you the correct grade for your tractor. Ask your dealer to show you, or write us direct.

Socony Gear Oil Socony Cup Grease

For satisfactory engine service and economy of operation, buy all your oils, greases and fuel under the *Socony Sign*.

COOPERATIVE TOBACCO GROWERS, SEDALIA, KY.

"Merchandise and Avoid Market Glut"

(Continued from page 354)

their organization plans the consumption in other cities will be studied, such as Philadelphia, Baltimore and other cities, based on consumption, freight rates, etc.

When the markets have been thoroughly studied the crop will be routed out to avoid gluts. In routing the crop, New York, Michigan and New Jersey shipments will be also watched. By this scientific method of routing, dumping will be avoided because there will be no individual shipments of consequence to overstock the market. Individual selling is the heart of dumping.

Another factor that the Maine growers have taken into consideration is that they have adopted the commodity viewpoint. They are looking on potatoes as potatoes whether they come from Tom, Dick or Harry. By this means of pooling no man can get preference over another. A director has no greater opportunity to sell his potatoes at a greater profit than the smallest grower.

The Technique of Organization

After taking up the aims of cooperation, Mr. Sapiro discussed the technique of the organization. The first factor under this topic is organization by commodity, not by locality or individuals. Local groups are essential in handling a perishable product, as far as the grading and storing of the commodity. The central organization takes care of the distribution and merchandising.

Obviously the state law must be so that the farm organization is free to go ahead. It is useless for farmers to attempt cooperative marketing in a proper manner if the laws of the State do not permit freedom of movement.

A very essential factor in the technique of organization is that of membership. Only farmers who raise the commodity or produce the commodity should be eligible to membership in the cooperative. Mr. Sapiro pointed out many of the pitfalls where members of the cooperatives who were not actual producers, had gained a foothold in it. Democratic control is a part of the technique of organization that lends to its strength. Each man has a vote and through the districting of directors it is possible to keep the control of the organization fairly distributed, eliminating the possibility of one district operating to the disadvantage of another.

There must be a contract that binds—a real hard and fast written agreement. It should cover a long period of time and should be tight. It is necessarily a long time proposition for there are local disorders to overcome, problems must be surmounted. It takes years to overcome prejudices.

The last factor in the technique of organization is the assurance of a volume of business which will be sufficient to warrant the cost of administration. In other words, there must be a minimum of volume. When the organization knows how many potatoes it is going to have at its disposal it can be determined very quickly whether or not the association is going to operate to the advantage of the grower. One of the greatest problems local potato grower associations have to face to-day is the fact that the amount of business they are able to do is so small that they cannot pay the overhead of the administration of the local.

The Man for the Job

In discussing the administration and the appointment of administrative officers, Mr. Sapiro said, "A popular man is not necessarily the man to be general manager. Appreciate friends—do not employ friends. What we need in our business of selling potatoes, are 'hard boiled' commercial experts; experts in selling, experts in financing and experts in merchandising. The cotton growers in the South are paying a salary to their general manager that rivals the salary of some of our highest paid executives. But the cotton growers feel that he is worth it, for their association is doing the work for which it was intended."

Judging from the response of growers in the meeting, a state wide plan must be put over in New York, if the

potato growers are to continue in business. Representatives from Monroe, Erie, Cayuga, Wyoming, Madison, Franklin, Allegany, Steuben, Ontario and Onondago counties have indicated that growers are ready for a state wide organization. But before New York can go ahead, there must be a great deal of preliminary work. The state must be mapped and districted to show where potatoes are grown and in what quantity. The cities must be districted as well as towns and villages.

There must be a survey made of the number of truckers hauling to cities and towns and the percentage of those who will or will not join. There must be campaigns to explain the contract to the farmer and his wife. Mr. Sapiro pointed out that the wife is as important as, and sometimes more influential than the grower himself, for contracts affect the home as well as the farmer. Other influences must be brought into line such as the Grange, the Farm Bureau, country newspapers, merchants, bankers, etc. It is very apparent that an association is needed in Northern New York, from a telegram which was received during the meeting which read as follows: "Franklin County potato industry needs marketing organization and will die out if not rescued from the bugs of ignorance, the blight of useless competition and the frost of present prices."

When the majority of folks are ready for it, then is the time to organize an association. This year it is very doubtful if an organization can be completed. In order to be effective it must be accomplished by July 1. Both in the minds of Mr. Sapiro and the officers of the association, it is very doubtful that anything could be accomplished before the first of July.

At the close of Mr. Sapiro's address a discussion followed relative to the organization of a state wide potato growers' association, many resolutions were proposed, amended and rejected. The final motion to be made and seconded was to the effect that the Board of Directors of the Empire State Potato Growers' Association adds to its body representatives of other potato growing sections not covered by the association and such other organization that it deems sufficiently interested to investigate a plan on the organization of a state wide potato growers' association. The personnel of this committee will not be complete for some time. As soon as it is complete it will be announced in the American Agriculturist.

NEW YORK MAPLE SYRUP CROP LESS THAN HALF NORMAL

HERSCHEL H. JONES

The members of the Board of Directors of the Maple Producers' Cooperative Association met last week at Syracuse to complete plans for handling this year's crop of maple syrup. The representatives of all the maple-producing sections of the State, which make up this board, without exception reported an extremely low production this year.

Due to weather conditions practically no trees were tapped in New York until after April 1, and in the more Southern counties the flow of sap has already ceased. In Delaware, Chenango, Greene, Cortland, Cattaraugus, Allegany and Wyoming the trees have already dried up and the producers have taken in their buckets. In Lewis, St. Lawrence, Franklin and Clinton, the prospect is for a few days more of good run, but the total production will be very much lower than last year. Altogether, the sugar and syrup production for the State will be less than 50 per cent of normal, according to all reports.

It is reported that in many sections of the State the commercial buyers have in the last week advanced their prices from \$1.43 to \$1.60 per gallon.

The Maple Producers have adopted a new financial policy for this season, and will not issue trade acceptances as advance payment on syrup, as last year. Their plant is now in good operating condition and ready to handle the new crop, which is expected in from the country to Syracuse in the next month.

Killed 200 Rats At One Baiting

Dog, Ferret and Traps Failed. Amazing Virus Quickly Killed Them All.
Not a Poison.

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Was discouraged. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

"The year previous Rats killed 200 out of 300 baby chicks. Last year saved them all. Will send for 10 bottles for neighbors, and we will clean up the whole neighborhood."

Rats, Mice, Gophers, in fact all Rodents, greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside hunting air and water. Harmless to humans, poultry, pets, stock, etc. Economical to use. Indorsed by Farm Bureau Experts and large, nationally known institutions everywhere.

You Can Get Yours Free.

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 2000 Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay postman only \$1.00 and few cents postage on arrival. Use one yourself and sell the other to a neighbor, thus getting yours free.

This special Introductory Offer also applies to the regular \$2.00 size, containing three times the quantity. This size is economical for killing large herds of rats, or in badly infested warehouses, scattered out-buildings, poultry houses, etc., or fields of Gophers. Simply specify that you be sent two of the regular \$2.00 sizes for the price of one. Readers risk no money, as Imperial Laboratories are fully responsible and will refund the cost on request any time within 30 days.

March Milk Pool Price \$2.20

Farm News From Albany and Farm Organizations

THE Dairymen's League Cooperative Association announces that the gross pool price for March is \$2.20 per hundred. This price is 55c higher than the gross pool price of March a year ago.

From the gross pool price there will be deducted 7c per hundred for expenses, and 10c will be borrowed on the Certificate of Indebtedness plan. This leaves a gross cash price to farmers of \$2.03 per hundred, which is 63c higher than the March price of last year. The gross price of February was \$2.38.

Latest reports state the present conditions indicate that the milk market promises to be very satisfactory for the dairymen this coming season.

FARM NEWS FROM ALBANY

The New York Senate has adopted a resolution ordering an investigation of the quality of milk and butter in Albany. This resolution followed a preliminary investigation made by Senator Straus, which showed that the milk used in the Capitol Lunch Room was unfit for human consumption.

By a vote of 80 to 35, the Assembly passed the Witter bills, amending the Farms and Markets Law, to require that all ice cream, no matter what flavor, contain at least 8 per cent butterfat. The bill now goes to the Senate. In 1922 a law was enacted making the minimum standard of fat content at least 8 per cent in plain creams and 6½ per cent in creams to which confections were added. The present bill was introduced on complaint of the New York City Health authorities, who want one standard for all creams of 8 per cent minimum butterfat.

The Assembly has passed the Kirkland Bill, amending the Highway Law so as to provide that bridges on State highways are to be constructed by the State, and that similar bridges on county highways are to be paid for on a fifty-fifty basis by the State and county.

WESTERN NEW YORK NOTES

ALVA H. PULVER

Two more cold storage plants have been planned for Western New York this season, at Charlotte and Newark. The papers call for a capitalization of \$200,000 on the Charlotte enterprise, with a capacity of 60,000 barrels, three floors and a basement, 120 by 140 feet. A 30-ton ice machine will be installed for the manufacture and sale of ice for local use, and the icing of cars for the New York Central. Arrangements will be made for the pre-cooling of fruit and packing rooms will facilitate the complete handling of peaches and other fruits direct from the orchards.

At Newark, the plans call for a plant with a capacity of 65,000 barrels, to cost \$250,000. An ice-making plant will also be part of the equipment, with an output of 30 tons daily. The storage will be located near the Northern Central Railway, west of Murray street. Growers in both districts are naturally elated over the prospect of at last realizing that their dreams come true on facilities for storing fruit and vegetables. With the returns made by various other concerns of like nature, it is a practical certainty that both plants will return good dividends.

A district meeting of the Western New York Cooperative Packing Association was held at Albion on Friday, with an attendance of over 150 members, representing associations at Medina, Lyndonville, Knowlesville, Albion, Holley, Parma, Watport, Kendall, and other points. Harry E. Wellman of Kendall, Chairman of the Production Committee, gave a report of his work and emphasized the need of producing better fruit. M. C. Burritt of the extension department of the State College, recommended to all members that they use the Farm Bureau spray service. Those present attested in the highest way to the merits of the service, many declaring that they received 50 cents more per barrel than neighbors who did not use the service.

In Wayne County, the farm Bureau is working out the spray information service for the coming season. Enrollment blanks have been sent the growers, and already over 600 have signed up for the season. When the spraying season opens it will be possible to reach all the growers receiving the service in about an hour's time. That this service, not only in Wayne County, but in all the other counties having such a service has been definitely proven of great value by the Western New York Cooperative Association, is shown by various checkups on the actual commercial pack of the members. It was found that the growers living in counties receiving the spray service will receive 97 cents more a barrel for Baldwins and 85 cents more a barrel for Greenings than the growers living in counties not having such a service. Last year there were 600 growers in Wayne County who received the service. It is expected that many more will register for the work this season.

COOPERATIVE COUNCIL MEETS

A meeting of the New York State Cooperative Council was held in Syracuse on Thursday, April 12. This organization is composed of representatives from every farmers' cooperative commodity organization in New York State. The Council meets to discuss and take action upon problems which concern all of the commodity organizations. It is the parallel organization to the New York State Conference Board of Farm Organizations, which is composed of representatives of the farm organizations not strictly in the commodity class. The members of the Conference Board are the New York State Grange, Dairymen's League Cooperative Association, Inc., New York State Federation of Farm Bureaus and the New York State Horticultural Society.

At its meeting at Syracuse, the Cooperative Council appointed F. E. Robertson, manager of the Wool Producers' Association; G. C. Gardiner, transportation expert of the G. L. F., and C. F. Hawes, Transportation Expert of the Dairymen's League, as a committee to study and report on the car-pooling plan of the National Railway Service Corporation. The Council also appointed another committee, consisting of Mr. Henry Burden of the Dairymen's League Cooperative Association, Thomas Wright of the New York Canning Crops Cooperative Association and Professor William E. Myers of the New York State College of Agriculture to study and make a report on the plan for making practical use in New York State of the new intermediate credit legislation recently passed by Congress.

Watch American Agriculturist for further news of the work of these two important committees and for articles explaining how the new intermediate credit legislation might be made of use to Eastern farmers.

We surely are pleased with your paper.—Mrs. J. ROLAND, Westover, Pa.

QUAKER HILL FARM SEEDS

are SUPERIOR because

1. Each strain was developed by plant breeding experts.
2. They have averaged highest yields in farm bureau and college tests.
3. Field and bin inspections by disinterested persons show the disease freedom and purity.

Dr. Hess Instant Louse Killer Kills Lice

Sciences Discovery Routs Chicken Lice

Mineralized Water Gets Rid of Dusting or Spraying—Birds Delouse Themselves. Fine for Baby Chicks and All Poultry.

A recent discovery promises to revolutionize all the commonly accepted methods for keeping poultry free from lice and mites. This wonderful product keeps the poultry always lice-free without the poultry raiser doing any work. It is the simplest, easiest, surest and best method ever discovered.

Hick's Lice-Go, which is the name of this remarkable lice remedy, is dropped in the chicken's drinking water. Taken into the system of the bird, it comes out through the oil glands of the skin and every louse or mite leaves the body. It is guaranteed to help the hatchability of the eggs and cannot injure the flavor of the eggs or meat; is harmless to chicks and does not affect the plumage. A few days' treatment at the start and then a little added to the drinking water each month is all that is necessary.

Send No Money—just your name and address to Chas. M. Hick & Company, Dept. 442, 1018 So. Wabash Ave., Chicago, Ill. A card will do. Mr. Hick is so confident that Hick's Lice-Go will get rid of every louse or mite that he will send you two large double strength \$1.00 packages for the price of one. When they arrive, pay postman only \$1.00 and postage. Sell one to your neighbor and get yours free. If you are not absolutely satisfied after 30 days' trial, your money will be refunded. This offer is guaranteed by two big Chicago banks, who say that Mr. Hick will do exactly as he agrees without question or argument. Write today before this remarkable trial offer is withdrawn.

The King of the Barnyard

Turkeys Still a Profitable Side Issue

By LEO J. PETWAY

THE farm is preeminently the home of this lord of the poultry tribe; their broad acres form an ideal breeding ground, and provide an ideal environment and an abundance of foods admirably suited to his needs. Since turkey raising is not a business for village back-lotters, the world must look to the farms and ranches for its supply of this holiday bird; and just so long as people of wealth and affluence demand this royal bird on their festal boards and holiday feasts, just so long will it pay to raise turkeys, for the demand is much in excess of the supply; then there is the business of supplying fancy stock for breeders and exhibition purposes, which is very fascinating and remunerative.

Following is the method, in condensed form, of a very successful Mammoth Bronze turkey breeder, as given me, and is so good I am glad to pass it on to others: In early fall we select ten or twelve good hens and a nicely marked, large-framed, full-breasted Tom, unrelated.

Flock Not Too Large

THIS number gives us all the turkeys we care to raise early, and we don't fool with late ones, as they are hardly worth putting on the market before next fall, and the extra expense of keeping more hens is more than overcome by having a fine bunch of early turkeys all ready for market at once.

Then in the spring we put large barrels out, turned on the side, and plenty of burr oak leaves, or other large leaves in them, and before we made a three-acre pen we kept the hens near the house during laying time by feeding them a little if they started off, and this kept them near-by, and they all laid in these barrels.

When one gets ready to set, we give her 15 to 18 eggs in her own nest, and we have shutters made of poultry wire over a hoop to keep "varmints" out, and also if another hen is laying in the same nest it keeps her shut out, and she hunts another barrel.

As fast as we can we set the eggs under chicken hens, nine to the hen and two hens at once, as the fresher they are set the better they hatch. And as quick as a turkey hen gets broody, we give her these eggs and give the chicken hens more. In this way we get them hatched earlier and give every hen little ones, as we like to have plenty of hens with the young ones; as we never pen ours in a small pen, but just let the mother hen come off when she gets ready, and as she can not get out of the three-acre pen, she cares for her own babies from the time she begins hatching. She selects her own roosting place at night.

Lice the Worst Enemy

IT must be remembered that lice are about the worst enemies the turkey raiser has to contend with. We give the hens a liberal dusting with sodium fluoride, London Purple or some good insect powder when we set them and again in about ten days, and we treat the poults when hatched and often enough during the growing season to keep down all lice, though care must be used not to injure the tender young ones while warring on the vermin. Keep a sharp lookout for head lice; they are especially injurious.

We do not feed the poults until at least 36 to 48 hours old; then we feed them curd or corn bread three times a day and keep plenty of clean water in shallow vessels, where they can get at it all the time. They also like a thick shade and should be provided some fine grit.

We never confine them except during a rain or storm, as we find the mother hen can take better care of them when let alone, though we see that they have plenty to eat, so they will not have to rustle in the wet. We also feed the mother hens good to keep them contented. In this way we raise 95 per cent of all that hatch.

A person of limited means can take one turkey hen, and if they only raise ten turkeys to the hen, it will pay more than a cow, as these ten turkeys should average \$5 each by fall, if like the

past few years on the market, and the turkey is not the expense a cow would be, nor is the investment as great.

Then the mother or the girls can raise the turkeys and have a nice pocket full of money by Christmas, and, too, they are sure of a market for them, and they can be kept where one is not allowed extra cows.

If one is situated so he cannot raise a flock, he may be allowed a few hens, and there is always a ready market for the eggs at almost your own price.

FAVUS OR DEPLUMING MITES

I would like to ask the cause of my chickens losing their feathers? The house is just covered with feathers. The birds are young ones, hatched in April. At first they did not seem well, but they are doing nicely now. I have sold most of the roosters. They weighed from 2½ to 3 pounds. I keep wheat and cracked corn in front of them all the time as well as bran, corn meal and other ground feeds. I feed them some poultry tonic in their dry mash. They also have buttermilk and all the fresh water they wish to drink. They have the free run of the range, and are only confined at night in the house which is well ventilated.—J. A. SHULLENBERGER, Mercer County, Pa.

There are two factors which may be causing this condition in your birds. One possible cause may be the disease known as favus. The other may be due to what is known as the depulming mite.

Favus is a skin disease which usually begins about the eyes, soon spreading to the entire head. Sometimes it extends to all feathered portions of the body. Affected portions become covered with small white or gray scales which contain the spores of the disease.

It is caused by a fungus and may be communicated to other fowls. Affected birds should be removed from the flock and their quarters thoroughly disinfected. Poultrymen find a satisfactory remedy in the use of an ointment made up of one part of sulphur, one part of kerosene and two parts of lard. This is applied to the affected parts after they have been gently rubbed with a blunt-edged instrument to dislodge the scales. Another good ointment consists of one part of calomel and eight parts of vaseline.

In case the loss of feathers is caused by depulming mites, the birds should likewise be isolated. The sulphur ointment mentioned previously is found satisfactory by many poultrymen. Another consists of a 2 per cent creosote solution, while another consists of one dram creolin, two ounces glycerin, one-half ounce alcohol and one-half ounce water. This, painted on the affected parts, is found to be very satisfactory. Another good solution is one part of balsam of Peru mixed with three parts of alcohol.

The depulming mites attack the feather at the base just where the feather enters the sheath. The feathers are cut off at this point. Naturally the action of the mites irritates the birds, and they soon get in the habit of pulling at their feathers, sometimes pulling out the feathers of birds roosting beside them.

IS "MOTHER OF VINEGAR" GOOD?

I have heard that "mother of vinegar" is wonderful as a moistener of dry poultry mash and stops hens from eating their eggs. Is this a fact?—W. G. N., New York.

Egg-eating is a habit that is usually started by the hen laying soft-shelled eggs due to improper feeding and insufficient exercise with an accumulation of hard fat in the abdomen. Right methods of feeding and nests partly secluded will usually prevent this. Hens secrete almost no saliva in their mouth, hence do not like mash dry as well as they do when it is moistened. Nevertheless experiments have shown that dry mash maintains better health and gives better egg production than it does when moistened.

Hens will readily eat any moist mash no matter what it is "moistened" with, but I doubt if they would eat mother of vinegar if it was fed alone. Acids of this kind are also liable to cause indigestion.—W. G. K.

Pure Bred vs. Good Bulls

Emphasis Should Be Placed On Quality, Not Name

IN nearly all advice on breeding up a herd of dairy cows great emphasis is placed on the purchase of pure-bred bulls. In my opinion, this is a mistake. I do not mean to say that the pure-bred bull is not desirable, but the emphasis should be placed on the "bull," not on the "pure bred."

In all the more advanced dairy sections, the cattle are pretty well graded up to the desired breed. In New York market milk sections this is mostly Holstein. One sees probably three grade Holsteins to one of all others. The type has been pretty largely fixed by now. A point which is not usually understood by farmers is that very often high-grades are in all respects, except in eligibility to registry, the same as pure bred.

According to Mendel's law, we can get pure-bred offspring from crossed ancestry. If we cross black guinea pigs with white ones, all of the offspring are black. These black crosses are, however, carriers of the white characteristics in a latent form. When we breed these black hybrids, we get offspring in the proportion of one white to three black. By further breeding we find that one of these black guinea pigs out of three is pure-bred black, and will breed true with other blacks. Two out of the three black offspring of the second breeding are hybrids, like their parents, and the white one is a pure-bred white. It will breed true with other whites. In cattle, this is not so simple as in this case of guinea pigs, but every farmer has observed that after several crossings with pure-bred sires we have cattle which can hardly be told from pure bred and which will breed true. These are for all practical purposes (except registry) pure bred.

When it is necessary to change over the cattle of a section from a beef type to a dairy type, or when they are badly mixed . . . scrubs, as they are called, pure bred are very valuable. They have only one line of blood. Their offspring are much more likely to resemble them than they are the dam, which has perhaps a dozen strains in her. One changes his mongrels or his beef herd into a dairy-type herd. When he has accomplished this, he has nearly always bred in superior milking qualities.

Type, then Production

AFTER he has a dairy-type herd, the next thing to be considered is the possibility of continuing the improvement in milking qualities. The average pure bred is better than the average scrub or beef cow, but she is not necessarily better than the average grade. A good many pure bred men will deny this, but observation will confirm it. The reason is very simple. A grade cow has, aside from her meat value, only one reason for living. She produces milk. If she does not produce enough, she very soon gets the razz. The pure bred has two reasons for living. She can confer the privilege of registry on her offspring. The natural result is that most any

By A. H. De GRAFF

pure bred is kept. This results in a lowered standard for milk production, and the poor pure bred and their poor offspring lower the average of all.

Many farmers believe that pure bred are less strong constitutionally than grades. If so, this is for the same reason—the survival of the unfit with the fit.

The practical application is as follows: The dairyman with grades cares only for two things, milk production and health of his herd. Looks also enter in, but they are not at all a deciding factor. If he can get higher milk production by using a pure-bred sire, he wants to do it. If not, he can see no reason at all for spending the extra money.

The question resolves itself, then, into this: Can one get as good offspring from the grade bulls available as from the pure bred available. This again is entirely a matter of finance. In the pure-bred game, the bull calf of a very large producer is worth far more than a heifer calf from the same animal. In general, the best class of bulls are pretty high. Then there is a class below these which is not so high, but which are still very good. The rest, which may still cost a fairly high price, are not as good as the best grade bulls. Grades have very little money value, hence one can take his pick for a song.

It seems to me that the value of the best grade bulls as sire for the herd has been overlooked. I have had it brought to my attention rather forcibly. A neighbor had the best herd in the two cow-testing stations of the county. All his cattle were grades. I was visiting him one day and got to talking the matter of pure-bred sires over with him. I was surprised to find that out of his twelve cows seven were sired by grade bulls, and these seven were the best, that is, all seven beat the other five, which were sired by pure bred. Three of these seven were among the best ten cows in the entire cow-testing association. He said that the grades had more stamina, the reason in my opinion for this showing, was that he was able to get the very pick of bull calves for perhaps ten dollars when he bought a grade to raise. When he bought a pure bred for a twelve-cow dairy, he could not afford to pay perhaps \$100 for a calf. That would make too much overhead. The result was that the grade he would buy would have the advantage.

My opinion is that the pure bred is superior to the grade if the sire and dam are superior or even equal to those of the grade. On the other hand, unless the pure bred is superior I should prefer the grade.

Another very interesting illustration of what a poor pure-bred sire can do to a herd is the experience of the South Dakota Experiment Station in grading up beef cattle. They took several grade Herefords and cared for them with their dairy cattle, and bred them to pure-bred Holstein bulls. One of these will serve as an illustration.

(Continued on page 370)

Is a Pure Bred Always Good?

A LOT of dairymen will disagree with Mr. De Graff's article on this page about the value of a pure-bred bull. A lot more will think that he has hit the nail exactly on the head. Therefore this is the kind of an article we like to publish, for it causes thought and brings out both sides of an argument, which results in conclusions founded on all the facts.

Personally, we think that Mr. De Graff is right in saying that the emphasis should be placed on the "bull" and not on the "pure bred," but, we believe that there is a much better chance of getting a good bull from pure-bred stock than there is from grades. The best proof of this is that the greatest milk and butterfat records have all come from cows sired by pure-bred bulls.

We emphatically disagree with Mr. De Graff in his statement that a grade cow that does not produce enough, "very soon gets the razz," while the pure bred is always kept on for breeding purposes. When we think of the literally millions of poor-grade cows, some of which can be found in nearly every dairy in the land, cows that never have paid and never will pay, yet are still carried year after year, we fail to see where the "razz" on grade cows comes in. On the other hand, in the great majority of pure-bred dairies, the breeders are particularly interested in improving production, and knowing what their production is by accurate records there is a constant tendency to weed out the poor ones.

Don't miss this important discussion, and whether you agree or disagree, let us have your views in a short letter.—The Editor.

Simplicity

The De Laval Separator is so simple, all of its parts are made with such care, accuracy and precision, that any one, no matter how inexperienced, can operate it successfully under all conditions of use. And any one capable of handling a wrench can completely assemble or disassemble it, quickly and easily, with the one simple tool shown above.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

The World's Greatest Scourge

(Continued from page 355)

the same story, that the ruins and remnants of Crete show an extraordinary degree of civilization in that land four or five thousand years ago. And yet these civilizations, so advanced, so perfected, had so completely disappeared that it is only the work of scientific observers in the last few years that has brought any trace of their existence to light.

"But I take the case of Rome. I agree we know more about Rome than we do about Egypt and Crete. But I do not think that it is realized how far Roman civilization had advanced. I was told the other day that when, in 1835, the English Minister, Sir Robert Peel, was summoned hastily from Rome to create a government in my country he took precisely the same time, no more, no less, than a Roman Emperor would have taken in performing the same journey 1,700 years earlier. Yet the Roman civilization perished, barbarism recovered occupation of the whole of Europe, and the condition of my country and of the greater part, if not the whole, of European countries relapsed so that that civilization became a mere dream and memory.

Why Rome Perished

"It is said often that Rome perished by reason of the invasion of the barbarism round her borders. Ladies and gentlemen, there is no truth in that delusion. Rome perished because the sections and nations which made up the Roman Empire were unable to keep from fighting with one another, and they destroyed the Roman structure and the barbarians merely came in to the scene of the crime after it had been committed. Rome committed suicide, let us take care that our civilization does not commit suicide also.

"And if we are to work for real peace, a real established peace, be well assured that we have no security for its permanence unless we succeed in limiting and reducing the armaments of the world. There is no use to hope that there is any real security for permanent peace so long as the nations stand on one side or the other of their border armed to the teeth for aggressive warfare. Every one agrees to that not only in this country, but practically all over the world. There is no dissenting voice, they all say armaments should be reduced; and yet at this moment no reduction has taken place in the aggregate.

"Some of the great nations have reduced to some extent their numbers from just before the war, but other great nations, and other nations not so great, but just as warlike, called into existence by the peace, have each insisted on their armed establishment, and in spite of the fact that Germany has very largely been disarmed, I am told that the net amount of armed men in Europe is greater than it was before the late war.

An Economic Drain

"That is not only a very serious thing for the cause of peace ultimately, but it constitutes an economic drain on the resources of Europe much too much for her in her present condition and which it can ill afford to bear, and the worst of it is that armaments breed armaments. If one country is armed, the next country is armed. If one increases its armament, the next country increases its armament. We read sometimes in the papers of terrible cases of human beings who have become addicted to some of these horrible drugs, morphine, cocaine or the like, and they go on taking more and more of them until they are ruined body and soul. We call them drug maniacs. Ladies and gentlemen, I fear very much that there are some armament maniacs left among the nations of the world.

"We who really seriously desire peace, who are not only talking about it, but wish to do something for it, let us consider for a moment what is the cause of this horrible state of things. Well, ladies and gentlemen, the disease is a fearful one, but luckily, the diagnosis is simple. What keeps alive armaments is one thing, and one thing only. It is the fear and suspicion of the nations for one another. It is the bottom of most of the troubles that afflict our world at the present time.

Well, what is the remedy for that? Why, the remedy is simple enough, at any rate simple enough to pronounce. We must have a new spirit in international affairs.

"We must get rid of the idolatry of force. We must get the nations to recognize—and many, many millions of them do recognize it that it is not force that counts in human affairs, but reason and persuasion. We all recognize that in our individual capacity. Force does not count in our individual lives. It is not in motive that really has any importance for us. If we look at the great organization of a city like this, the peculiar arrangements are not the result of force. It is not that you or those who live here are afraid of violence if they do not conform to the usages of civilized society. They do it voluntarily. The vast mass of their actions, the vast number of those proceedings which make life in a great city or life in the country possible, tolerable, for those who live there. Why, there is nothing more powerful in the world than the public opinion of your fellows. It governs your dress, it governs what you eat, it governs what you play at; it governs almost everything you do from our business to your pleasure, from morning until evening.

"It is public opinion which governs, next to your self-respect and your own judgment of what is right; it is public opinion that governs you throughout the whole of your life. And what is true with individuals is true, or ought to be true, with nations, provided you take the proper steps to concentrate, develop and publish public opinion throughout the world, so that a nation bent on a desperate effort to assassinate its neighbor will be restrained by the obloquy of the whole civilized world. And the first condition that is necessary for that is to get rid of these vast threatening large armaments which prevent the full course of public opinion throughout the world.

What Conditions are Necessary?

"Well, now, what are the conditions which are necessary to fulfill if you are to induce the nations of the world to disarm? You have no great land armaments in this country. Why? Because you are not threatened by any neighbors who desire to attack you—oh, not seriously threatened! If you could get the same state of mind in Europe you would get the same result. If you could say to the nations of Europe: 'Don't be afraid. There is no real danger. You may sleep quietly in your beds. You may put off once for all this vast burden of armaments. You may cease to create dangers for your neighbors on the effort to create safety for yourself.'

"And you must do that by saying to nations, when we ask them to disarm: We will give you security which will enable you to dispense with armaments. I believe that can be done. I believe that, take a continent, a quarter of the globe, like Europe, if all the nations there were to agree that if each of them reduced their armaments to an agreed amount, all of them would come to the assistance of any one of them who was attacked—just think what a splendid advance that would be! It would rule out aggressive attack forever. Aggressive attack would be so dangerous that no nation would ever undertake it.

Get Rid of Aggression

"If you get rid of aggression, you get rid of war, because war must begin by aggression on one side or the other. I am firmly convinced that an arrangement of that kind in Europe would be of enormous advantage, and I would like to see as part of that arrangement an agreement among the nations, at any rate among the nations who felt themselves in danger of attack, that there should be a zone between nation and nation, demilitarized and made incapable of being used without delay and preparation for the advance of an invading army, so that the guaranty offered to them by other nations in Europe would become effective before it was too late. That is the kind of scheme by which I think security might be given.

The Valley of the Giants—By Peter B. Kyne

COLONEL PENNINGTON drove up to the business center of the town. The streets were deserted, but one saloon—the Sawdust Pile—was still open.

The Colonel approached the table where the Black Minorca sat, and touched the *cholo* on the shoulder. The Black Minorca turned, and Pennington nodded to him to follow; whereupon the latter cashed in his chips and joined his employer on the sidewalk. Here a whispered conversation ensued, and at its conclusion the Black Minorca nodded vigorously.

"Sure!" he assured the Colonel. "I'll fix 'em good and plenty."

Together Pennington and the Black Minorca entered the automobile and proceeded swiftly to the Laguna Grande Lumber Company's mill-office. From a locker the Colonel produced a repeating rifle and three boxes of cartridges, which he handed to the *cholo*.

Twenty minutes later, from the top of a lumber-pile in Cardigan's drying-yard, Bryce Cardigan saw the flash of a rifle and felt a sudden sting on his left forearm. He leaped to gain the shelter of the engine, and another bullet struck at his feet and ricocheted off into the night. It was followed by a fusillade, the bullets kicking up the freshly disturbed earth among the workers and sending them scurrying to various points of safety.

"I don't think he's hurt anybody," Buck Ogilvy whispered as he crouched with Bryce beside the engine, "but that's due to his marksmanship rather than his intentions."

"He tried hard enough to plug me," Bryce declared, and showed the hole through his sleeve. "They call him the Black Minorca, and he's a mongrel greaser who'd kill his own mother for a fifty-dollar bill."

"I'd like to plug him," Buck murmured regretfully.

"What would be the use? This will be his last night in Humboldt County—"

A rifle shot rang out from the side of B Street; from the lumber-pile across the street, Bryce and Ogilvy heard a suppressed grunt of pain, and a crash. Instantly out of the shadows George Sea Otter came padding on velvet feet, rifle in hand—and then Bryce understood.

"All right, boss," said George simply as he joined Bryce and Ogilvy. "Now we get busy again."

"Safe-o, men," Ogilvy called. "Back to the job." And while Bryce, followed by the careless George Sea Otter, went into the lumber-yard to succor the enemy, Ogilvy set an example to the men by stepping into the open and starting briskly to work with a shovel.

At the bottom of the pile of lumber the Black Minorca was discovered with a severe flesh-wound in his right hip; also he was suffering from numerous bruises and contusions. George Sea Otter possessed himself of the fallen *cholo's* rifle, while Bryce picked the wretch up and carried him to his automobile.

"Take the swine over to the Laguna Grande Lumber Company's hospital," he ordered George Sea Otter. "I'll keep both rifles and the ammunition here for Jules Rondeau and his woods-gang. They'll probably be dropping in on us about two a. m."

CHAPTER XXVII

HAVING dispatched the Black Minorca, Colonel Pennington fairly burned the streets to his home.

The violent slam with which he closed the front door brought Shirley, in dressing-gown and slippers, to the staircase. "Uncle Seth!" she called.

"Here!" he replied from the hall below.

"What's the matter?"

"There's the devil to pay," he answered. "That fellow Cardigan and Ogilvy have a gang of fifty men at the intersection of Water and B streets, cutting in a jump-crossing of our line."

He dashed into the living room, and she heard him calling frantically into the telephone.

"That you, Poundstone?" she heard him saying. "Pennington speaking. Young Cardigan is behind that N. C. O. outfit, and it's a logging-road and not intended to build through to Grant's Pass at all. Cardigan and Ogilvy with a gang of fifty men are cutting in a jump-crossing of my line!"

"Telephone the chief of police and order him to take his entire force down there, if necessary, and stop that work. To blazes with that temporary franchise! Tell the chief of police not to recognize it. He can be suspicious of it, can't he, and refuse to let the work go on until he finds you? And you can be hard to find, can you not? Delay, delay, man! . . . Yes, yes, I understand. You get down about daylight and roast the chief of police for interfering, but in the meantime! . . .

Thank you, Poundstone, thank you. Good-bye."

He stood at the telephone and when he spoke again, Shirley knew he was calling his mill-office. "Sexton? Pennington speaking. I've sent over the Black Minorca with a rifle and sixty rounds of ammunition. . . . What? You can hear him shooting already? Bully boy! He'll clean that gang-out and keep them from working! You've telephoned Rondeau, have you? . . . Good! As soon as the switch-engine starts for the woods, meet me down at Water and B streets."

Shirley was standing in the doorway as he faced about. "Uncle Seth," she said quietly, "use any honorable method of defeating Bryce Cardigan, but call off the Black Minorca."

"Silly girl!" he soothed her. "Don't you know I would not stoop to bush-whacking? It's wild shooting, just to frighten Cardigan and his men off the job."

"You can't frighten him," she cried passionately. "You know you can't. He'll kill the Black Minorca, or the Black Minorca will kill him. Go instantly and stop it."

"All right, all right!" he said rather humbly, and sprang down the front steps into the waiting car. "I'll play the game fairly, Shirley, never fear."

SHE stood in the doorway and watched the red tail-light, like a malevolent eye, disappear down the street. And as she stood there, down the boulevard a huge gray car came slipping noiselessly. It was Bryce Cardigan's Napier.

"George!" she called. "Come here."

The car stopped at the sight of the slim white figure running down the garden walk.

"Is Mr. Cardigan hurt?" she demanded in an agony of suspense.

George Sea Otter grunted contemptuously. "Nobody hurt 'cept the Black Minorca. He tried to shoot my boss, so I shoot him myself once through the leg. Now my boss says: 'Take him to the Laguna Grande hospital, George.' Me, I would drop this greaser in the bay."

She laughed hysterically. "On your way back stop and pick me up, George," she ordered.

Meanwhile Colonel Pennington had reached the crossing, simultaneously with the arrival of Sam Perkins, the chief of police, accompanied by two automobiles crammed with patrolmen. Perkins strutted up to Bryce.

"What's the meaning of all this row, Mr. Cardigan?" he demanded.

"Something has slipped, Sam," Bryce retorted pleasantly. "You've been calling me Bryce for the past twenty years! The meaning of this row?" Bryce continued. "Well, I'm engaged in making a jump-crossing of Colonel Pennington's tracks, under a temporary franchise granted me by the city of Sequoia." And he thrust the document under the police chief's nose.

"This is the first I've heard about any franchise," Sam Perkins replied suspiciously. "Seems to me you been mighty secret about this job. How do I know this ain't a forgery?"

"Call up the mayor and ask him," Bryce suggested.

"I'll do that," quoth Mr. Perkins ponderously. "And in the meantime, don't do any more digging or rail-cutting." He hurried away to his automobile.

"Also in the meantime, young man," Colonel Pennington announced, "you will pardon me if I take possession of my locomotive and flat-cars. I observe you have finished unloading those rails."

"Help yourself, Colonel," Bryce replied.

With the greatest good nature in life, Pennington climbed into the cab, reached for the bell-cord, and rang the bell vigorously. Then he permitted himself a triumphant toot of the whistle, after which he threw off the air and gently opened the throttle.

WITH a creak and a bump the train started, and the Colonel ran it slowly up until the locomotive stood on the tracks exactly where Buck Ogilvy had been cutting in his crossing; whereupon the Colonel locked the brakes, opened his exhaust, and blew the boiler down.

"That engine being my property," he announced, "I'll take the short end of any bet you care to make, young man, that it will sit on those tracks until your temporary franchise expires. I'd give a good deal to see anybody not in my employ attempt to get up steam in that boiler until I give the word. Cut in your jump-crossing now, if you can, you whelp!"

"I rather imagine this nice gentleman has it on us, old dear," chirped Buck Ogilvy plaintively. "Well! Let us gather up our tools and go home, for something tells me that if I hang around here I'll bust this sleek scoundrel's gray head! Hello! Whom have we here?"

Bryce turned and found himself facing Shirley Sumner. Her lip was quivering, and the tears shone in her eyes like stars. He stared at her in silence. "My friend," she murmured tremulously, "didn't I tell you I would not permit you to build the N. C. O.?"

He bowed his head in rage and shame. Buck Ogilvy took him by the arm. "'Tis midnight's holy hour," he quoted, "'and silence now is brooding o'er a still and pulseless world.' Bryce, old chap, this is one of those occasions where silence is golden. Speak not. I'll do it for you. Miss Sumner," he continued, bowing graciously, "and Colonel Pennington," favoring that triumphant rascal with an equally gracious bow, "we leave you in possession of the field—temporarily. However, if anybody should drive up in a hack and lean out and ask you, just tell him Buck Ogilvy has another trump tucked away in his kimona."

Bryce turned to go, but with a sudden impulse Shirley laid her hand on his arm—his left arm. "Bryce!" she murmured.

He lifted her hand gently from his forearm, led her to the front of the locomotive, and held her hand up to the headlight. Her fingers were crimson with blood.

"Your uncle's killer did that, Shirley," he said ironically. "It's only a slight flesh-wound, but that is no fault of your allies. Good-night."

And he left her standing, pale of face and trembling, in the white glare of the headlight.

CHAPTER XXVIII

SHIRLEY made no effort to detain Bryce Cardigan. Ogilvy remained long enough to order the foreman to gather up the tools, and dismiss his gang; then he, too, entered the automobile, and at a word from Bryce, the car slid noiselessly away into the darkness. The crew departed a few minutes later, and when Shirley found herself alone with her uncle, she gave way to the

tears she could no longer repress. Pennington stood by, watching her curiously.

"Well, my dear?" he queried nervously.

"I—I think I had better go home," she said without spirit.

"I think so, too," he answered. "Get into the flivver, my dear. And perhaps the least said the better, Shirley. There are many things that you do not understand."

"I can understand an attempt at assassination, Uncle Seth."

"That blackguard Minorca! I told him to bluff and threaten. While I gave him orders to shoot, I told him distinctly not to hit anybody. Good Lord, Shirley, surely you do not think I would wink at a murder!"

"I do," she answered passionately. "With Bryce Cardigan out of the way, you would have a clear field before you."

"At another time and in a calmer mood we will discuss that villain," he said authoritatively. "If we argue the matter now, we may quarrel, and that is something neither of us can afford. Get into the car, and we will go home."

"Your sophistry does not alter my opinion," she replied firmly. "However, as you say, this is neither the time nor the place to discuss it."

THEY drove home in silence. Shirley went at once to her room. For the Colonel, however, the night's work had scarcely begun. The instant he heard the door to his niece's room shut, he went to the telephone and called up the Laguna Grande roundhouse. Sexton, his manager, answered.

"Have you sent the switch-engine to the woods for Rondeau and his men?"

"Just left."

"Good! Now, then, Sexton, listen to me: As you know, this has developed so suddenly I am taken by surprise and have had no time to prepare the kind of counter-attack that will be most effective. However, with the crossing blocked, I gain time in which to organize. I am proceeding to San Francisco to-night by motor. I will arrive late to-morrow night, and early Saturday morning I will appear in the United States District Court with our attorneys and file a complaint and petition for an order temporarily restraining the N. C. O. from cutting our tracks."

"I will have to make an affidavit to support the complaint, so I had better be Johnny-on-the-spot to do it. The judge will sign a restraining order, and after I have obtained it, I will have the United States marshal telegraph it to Ogilvy and Cardigan!"

"Bully!" cried Sexton heartily.

"In the meantime," Pennington continued, "we need that locomotive for its legitimate purposes. Take all that distarded machinery we removed from the mill last fall, dump it on the tracks at the crossing, and get the locomotive back on its run. Understand?"

"Yes, sir."

"I'll be back Sunday forenoon."

He hung up, went to his chauffeur's quarters and routed the man out of bed. Then he returned to his room, dressed and packed a bag, left a brief note for Shirley, and started on his two-hundred-and-fifty-mile trip.

Quite oblivious of her uncle's departure, Shirley lay awake, turning over and over in her mind the various aspects of the Cardigan-Pennington imbroglio. Of one thing she was quite certain; peace must be declared at all hazards. She had been obsessed of a desire, rather unusual in her sex, to see a fight worth while;

(Continued on page 367)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

BRYCE CARDIGAN and Buck Ogilvy are determined that that jump-crossing shall go in. Colonel Seth is equally determined that it shall not. A battle royal is in progress, Bryce and Buck having outwitted the Colonel by obtaining a franchise, the Colonel being the stronger, however, both in finances and because he is utterly unscrupulous.

Shirley fights fairly, and is just beginning to suspect her uncle's methods in protecting their joint interest. She has managed to maintain her friendship with Bryce and also with Moria MacTavish, his office aide, with whom redheaded Buck has fallen deliriously in love. Through Bryce, Shirley obtains a dictograph to overhear the secret conversation of her uncle and Mayor Poundstone.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words: "Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437
Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

World's Greatest Scourge

(Continued from page 365)

"But it is evident that for that scheme to be effective you must create or utilize some international authority. Disarmament to be effective must be general. You will never get one nation to disarm as long as other nations arm. If you are to carry out a general scheme of disarmament, you must have an international organization to supervise it. If you are to have a scheme of zones, of demilitarized zones, you must have an international authority to overlook it.

But you have got to do something much more than that, you have got to carry out and apply not to Europe only, but to all nations, you have got to carry out a scheme of moral disarmament as well as material disarmament. You have got to bring the nations together, to teach them that their common interests are far greater than their common antagonisms, to teach them that just as it is true of individuals that we are all parts one of another, and that if individuals in a great community suffer, then the whole community suffers; so we must teach the nations of the world that they are all parts of one common whole; and that it is untrue, a devilish untruth, that there is any advantage to any one nation in the misfortunes or the poverty of others.

International Cooperation

"International cooperation is not only a proper object, it is inevitable. If there are more than a million men now out of work in England, it is because, very largely if not entirely, of the economic difficulties which are in operation in the rest of Europe. If the farmers of the United States are unable to sell their wheat at a remunerative price, it is because their customers in Europe are unable to buy it. The economic interdependence of the world is a great fact; it is not a thing about which we need argue, it is a fact which we cannot get out of, and if the economic interdependence of the world fact, much more is the scientific, the intellectual, the moral interdependence of the world a fact also.

"We must recognize that there are great common interests in the world, and we must do our best to provide for them. There are great moral evils which affect the whole world.

"Therefore we must have, surely we must have at any rate for those purposes, periodic meetings, conferences, discussions, some kind of machinery to make those discussions and conferences effective; and let us add, surely we may add this, some kind of machinery for diminishing the danger of international disputes, and preventing disputes from degenerating into war. Is that so very unreasonable? Does that really offend any of our prejudices, or any of our preconceived opinions? And that, ladies and gentlemen, as you all know, is fundamentally all that the League of Nations proposes to do."

The Valley of the Giants

(Continued from page 366)

she realized now, however, that she had permitted matters to go too far. A revulsion of feeling against her uncle, induced by the memory of Bryce Cardigan's blood on her white finger-tips, convinced the girl that, at all hazards to her financial future, henceforth she and her uncle must tread separate paths. She had found him out at last.

It was rather a relief, therefore, when the imperturbable James handed her at breakfast the following note:

SHIRLEY, DEAR:
After leaving you last night, I decided that in your present frame of mind my absence for a few days might tend to a calmer and clearer perception, on your part, of the necessary tactics which I saw fit to pursue last night. And in the hope that you will have attained your old attitude toward me before my return, I am leaving for San Francisco. I do not feel equal to the task of confronting you until, in a more judicial frame of mind, you can truly absolve me of the charge of wishing to do away with young Cardigan.

Your affectionate
UNCLE SETH.

Stomach Disorders

Dr. West Tells How to Avoid Them

OF all the ailments to which human flesh is heir, the most common is undoubtedly—*indigestion*. We speak of indigestion as a disease, but it is merely a symptom. The condition may exist alone; it may be the forerunner of some more serious stomach disorder, and it always accompanies grave organic trouble. For instance, in tuberculosis of the lungs, indigestion is sometimes the only symptom, and in that insidious disease, cancer of the stomach, the first warnings are always those of indigestion.

In a well person, symptoms referable to the stomach are not always due to overeating. Just as the voice may be affected when we are tired, so physical and mental strain affect the digestion; if, then, we eat a heavy meal when overfatigued, the stomach cannot handle the food, and an attack of acute indigestion may follow. This disorder is sometimes so severe as to cause death by pressure of gas upon the heart. When gas arises and causes painful distention of the stomach, it can be quickly removed with half a teaspoonful of pure sodium-bicarbonate dissolved in a cup of very hot water. The heat allays pain, the soda brings up the gas, and relief is usually quite prompt. If there is a desire to vomit, it should be encouraged, as unloading the stomach is the speediest way to end the trouble. Never fail to loosen the clothing at waist and neck.

A severe chill may precede an attack of acute indigestion. Hot water, sipped slowly, a hot-water bag at the feet and a mustard plaster over the stomach will bring a quick response. The plaster must be hot. After the acute symptoms have subsided, the entire intestinal tract should be swept clean with a dose of castor oil. The objections to this excellent remedy can be overcome by keeping on hand the following mixture: Castor oil, 8 ounces; oil of wintergreen, 10 minims; oil of cinnamon, 2½ minims; saccharine, 2½ grains; alcohol, ½ ounce. Mix.

For several days after an acute attack of this kind, the diet should consist of milk, rice, farina and similar bland foods.

Even a Patient Stomach Rebels

Chronic indigestion may exist for years without giving rise to anything more serious than discomfort after eating. Some persons always experience this condition after a heavy meal, on eating hurriedly, or on partaking of certain foods.

The stomach is the most primitive organ in the body, and therefore one of the most tolerant; it adjusts itself to the treatment accorded it, but chronic indigestion unfits the system to resist troubles in other regions. Therefore the affection should not be allowed to continue. If we chew every particle of food to a creamy mass before swallowing, stomach disorders would quickly vanish. "Bolting" our meals is at the root of much digestive trouble. It is better to eat less and to eat light foods if we cannot take the time to chew thoroughly a heavy meal.

How we eat is really more important than what we eat. Many of those who suffer with derangements of the stomach are unable to chew their food thoroughly because of defective teeth. I cannot repeat too often that digestion really begins in the mouth. Unless you have good teeth, you cannot properly chew your food. The act of chewing and the taste of food stimulates the flow of saliva. Now, the function of saliva is not only to moisten food, but what is vastly more important, it converts starches into the more

digestible sugars. If, therefore, a meal is hastily swallowed you not only hamper the stomach with a mass of heavy material, but you further cripple it with starches that cannot be digested in the gastric juice, which is acid in its chemical reaction. This food must wait until it passes out of the stomach into the small intestine, where it again finds an alkaline medium, to complete the act of digestion. You will also understand now why we are advised not to drink anything while eating. Many wash their food down with copious draughts of water. The effect of this is threefold: it prevents dry food from stimulating the proper flow of saliva; it softens the mass of food and interferes with the action of saliva, thus checking the first act of digestion; it prevents the thorough mastication of food.

Taking liquids with meals is not a bad habit, if the liquid is not used to moisten and wash down food. To sip water between each mouthful or at the beginning and end of a meal acts as a solvent upon the material in the stomach, and so assists in the digestion and absorption of nutriment.

This explains why proper and careful habits of eating are in themselves sufficient to correct many digestive ills.

How to Deal with Dyspepsia

In former years the term "dyspepsia" was applied to various disorders of the stomach. General debility usually follows years of chronic indigestion and the word dyspepsia covers the condition.

Dyspeptics should first ask themselves the question: Is my mouth healthy? which of course includes the teeth. If your teeth are poor, let this be your first care. Stomachic troubles are sure to follow in the wake of an unhealthy mouth or insufficient teeth with which to grind your food thoroughly.

Organs that have been subjected to years of constant abuse require rest. In chronic stomach disorders, it is an excellent plan to aid the digestion with such remedies as fulfill this mission without taxing the enfeebled organ itself. The following is a favorite combination employed by a well-known stomach specialist. Caroid, taka-diastase—of each 5 grains; aromatic powder, sufficient. This amount constitutes one dose. It is put up in powder form and is dissolved in a tea cup of hot water to be sipped during the meal. This mixture aids the digestion of all kinds of food, but in any condition of gastric trouble, a carefully selected diet will hasten the cure.

Diet is All-Important

The diet of most "dyspeptics" contains too much starch. Authorities agree that it is an excellent plan to omit starches and sugars entirely for a while. Such a diet is a hardship to many who eat white flour, potatoes and the like almost exclusively. To these I suggest toast, zwiebach, crackers, dry crusts, sugar limited to the smallest amount; easily digested fats, that is, cream, butter, oil; all green vegetables steamed in their liquor (not boiled in water, which deprives them of their mineral content), and an abundance of eggs, milk, white meat, with red only occasionally. No fried, smoked meats, no rich, greasy, spiced made over dishes. Fresh fruits in season. In general, a mixed diet is best with the preference given to easily digestible meat, milk, eggs, and fat (butter, olive oil etc.) —CHARLOTTE C. WEST.

Girl or Boy? We voted for boy, but Mrs. Clarence R. Weidle of McKean, Pa., says this is her grand-daughter and she ought to know. Myra Faith Fuchs is her name; she is two and a half; can sing

her Mother Goose rhymes; eats milk, eggs, potatoes and vegetables; and delights in having her picture taken. It's no effort for Myra Faith to "look pleasant"—her face just goes that way.

Give a thought to Advertising

This week we are going to devote this column to a discussion on advertising and the farm woman. Some say women are not interested in advertising, while others say it is the most valuable part of the farm papers they read.

We all know that men depend on advertising to decide what they will buy, so let us ask you the question: "Does advertising help women, and are they interested in it?"

The other day, our Household Editor showed me a letter from one of our subscribers in which she said that advertising was spoiling her Household Page. She said she never read advertisements and wished we could run our paper without advertising in the Household Department.

I wonder what would happen if that woman would stop for a moment and glance around her own home. Undoubtedly, she'd be surprised at the large part advertising has played in her life, even if she does not read the advertisements herself.

Maybe you agree with this woman and do not like to read advertisements, in which case you will probably be interested in the familiar story of which I am reminded.

Mrs. Day, a certain lady living on a New York State farm, always said that advertisements bored her, yet, she began her morning by turning off the ringing of her BIG BEN and turned on a new gas jet supplied by their recently installed COLT LIGHTING SYSTEM. She prepared breakfast hurriedly over her oil stove equipped with the HIGH SPEED LORAIN BURNER and had both WHITE HOUSE COFFEE and POSTUM for breakfast, as one member of the family used POSTUM because "There's a Reason."

After putting her family washing in her new MAYTAG machine, and doing her baking with the help of CRISCO and RYZON, which necessitated refilling the stove with SOCONY, her morning's work was well started. Before dinner, her dishes had all been washed with the use of FELS-NAPHTA on a STANDARD size sink, and the floors scrubbed with RED SEAL LYE.

In the afternoon she made a short trip in her new CHEVROLET SEDAN equipped with GOODRICH CORDS, her neighbor admired her new car, but said they had just decided to buy an OVERLAND.

Her husband returned from a trip to town in his GENERAL MOTORS TRUCK in which he had made four trips that day; he said if it had not been for the CONCRETE ROAD, he could never have done it, as all other roads were impassable at this time of the year.

In locking up the henhouse at night, her task was made easy by the use of her EVER-READY FLASHLIGHT, which saved her from tripping over some boards which her small boy had left in the path.

Her husband remarked in the evening that their greatest comfort was their new MILWAUKEE WATER SYSTEM as they now had a complete bathroom equipment. Finally, she decided to go to bed and have a splendid sleep on her OSTERMOOR MATTRESS.

And this woman said that she did not believe in ADVERTISING. Can you beat that?

How to Grow Dahlias

Quilt Directions Wanted—Our Weekly Patterns

THE dahlia is one of the most beautiful of our fall flowers and very easy to grow. If you are a flower lover you can grow them from seeds and get a large number of tubers with flowers of many kinds and colors. For my part I thoroughly enjoy watching the buds develop on seedling dahlias, for I know that something new is very likely to show up when it opens. If we will buy a package each of the best double seed of the various types, we will have a better assortment than if we try to get all the sorts in one mixture. Considering that after we once get the bulbs we can keep them over and build up a splendid collection, the cost of seeds is a small matter. We can even sell tubers enough to pay the cost if we wish, for good dahlia tubers are in demand where they are known.

Dahlia seeds are large and the plants grow fast, so it is not necessary to plant them very early. The soil must be fairly warm when the plants are set out, so if we start them in boxes about now, we will have them in plenty of time.

Plant them thinly and if too thick transplant some to other boxes. This is a good way to handle them: plant rather thick in one box and when growing well, transplant to other boxes two-inches apart each way to give room for good development. This will give

strong plants that will take hold at once. Keep in as good light as you can.

Set the plants in rows in the garden and cultivate with the hoe if you wish, for they will do well enough that way. They are strong growers and should be planted regular corn-row distance apart. I plant eighteen inches apart in the row. When they bloom in the fall, select the finest colors, and label with a description while in bloom and then when you put away, keep the label with them. You may well give names to each chosen sort. Keep the more ordinary sorts as a mixture or discard such as you do not think worth growing.—BERTHA ALZADA.

QUILT DIRECTIONS WANTED

Can any of our readers tell how to make a quilt called the Rag Carpet? Miss E. M. of New York State writes that she wants to get the directions.

She says: "My block is six inches square when pieced, and is made of six pieces six inches long and one inch wide. It should be set together, so it would look like weaving, but I am unable to do it without directions or picture."

We would be glad to hear from anyone who can help Miss E. M.

FIVE STARS ON THE STAGE OF FASHION

FIRST is the faithful blouse, so popular in the winter fashion parade and back again at the head of the spring line of march. Every spring blouse has its perky side bow, of the material itself or in satin ribbon. No. 1729 is no exception and is just the thing to wear with a cloth suit. It comes in sizes 16 years, 36, 40 and 44 bust, and requires over 2 yards of 36-inch material for size 36. Add 2½ yards of binding. Price of pattern, 12c.

THE matron will feel suitably attired for the part she has to play if she wears this becoming dress for a full figure, with panel and trimming bands which slenderize the appearance of the stout woman. No. 1726 cuts in sizes 42, 44, 46, 48, 50 and 52-inches bust measure, with either short or long sleeves. Size 46 takes 3½ yards of 36-inch material with 1½ yards of 30-inch contrasting. Price, 12c.

THE part of a demure schoolgirl in the fashion parade is played by this little bloomer dress with its overblouse in smock style, trimmed with Peter-Pan collar and buttons. In gingham chambray or cotton crepe it is ideal for school wear. The bloomers are separate, so if the frock is made of more dressy material, it can be worn with fluffy petticoats. No. 1678 comes in sizes 2, 3, 6, 8 and 10 years, and like all our patterns has liberal allowance for seams and for growth. Price, 12c.

THE young woman-about-the-house looks well and feels presentable in this attractive two-material gown. If the woman who wears it is not especially good at home dressmaking, she need not fear to try this simple pattern—it offers no stumbling block. No. 1656 cuts in sizes 34, 36, 38, 40, 42 and 44-inches and size 36 takes 2 yards of 36-inch material, with 1½ yards contrasting. Price, 12c.

AND for the high school or college girl, this port little frock is just the thing to wear. The new handkerchief effect is shown at the neck, the touch of gay peasant embroidery on the pockets. Yet No. 1676 is simple and youthful and not hard to make at all. It cuts in sizes 14, 16, 18, and 20; only 3½ yards of 40-inch material required for the medium size. Price of pattern, 12c. Transfer 630, 12c.

To Order: Enclose correct amount (preferably in stamps). Write name, address and numbers clearly, and send to Fashion Department, American Agriculturist, 461 Fourth Ave., New York City.

If you want our big new spring catalogue, enclose 10c more.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts
Banish Vermin, Make Fowls Grow
Faster and Increase Egg Yield

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water,

all lice and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big \$1 packages for only \$1. Send no money, just your name and address—a card will do—to the Paratabs Laboratories, Dept. 889, 1100 Coca Cola Bldg., Kansas City, Mo., and the two \$1 packages, enough for 100 gallons of water, will be mailed. Pay the postman \$1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.

Reviewing the Latest Eastern Markets and Prices

WOOL PRICES FIRM

THERE is a broadening tendency to the wool market, both here and abroad, and the tendency of prices in consequence is to harden. There is a more pronounced interest in fine wools, which have been in tremendous demand and in relatively small supply. It is understood that of the imports of fine wools from abroad this season the greater part of such wools have already passed into the hands of the manufacturers.

In the West, short combing fine, and fine medium clips are now definitely on a clean basis, landed Boston, of \$1.40 and not infrequently slightly more is estimated to have been paid. The Idaho Falls wools, of about 50,000 fleeces, were bought last week at 43½¢ for wool shrinking possibly 57 per cent and running closely to ¾-blood and ¼-blood grades.

In the Boston market there has been a wide range of wools sold so far as qualities are concerned, and more interest is being shown in scoured wools of nearly all grades. Prices are very firm, and the tendency is to harden unless on low grades scoureds and wool oils.

Following are the quotations on the New York market April 13: Domestic, cleaned, unwashed Ohio and Pennsylvania, fine delaine, 56 @ 58¢ per lb.; XX, 52 @ 54¢; ½-blood, 55 @ 56¢; ¾-blood, 52 @ 53¢; ¼-blood, 50 @ 51¢.

POTATO MARKET STRONG

Most of the buyers in New York City are now showing a decided preference for Idaho potatoes. The market firmed up last week from \$1.90 cwt. sacked, delivered, to \$2.20, and some of the largest shippers were not quoting until they have caught up on the orders they had booked.

Some cars of Maines came into Harlem yards frozen, and this stock had a tendency to keep the prices unsettled. Other yards report light arrivals and a good trade.

Total carlot shipments of old-crop potatoes in the country this season up to April 7 were 150,040, compared with 157,433 last season to same date, and a total of 185,425 cars for all of last season. Carlot shipments of new-crop potatoes this season, however, were 26,441, compared with 19,858 in the same period last year. This means the total shipments of both late and early crop this season up to April 7 were over 7,000 cars in excess of last year's shipments in the same period.

STORAGE APPLES SHOW SCALD

The bulk of the offerings of barreled apples at New York last week came out of storage with a bad condition of scald. Fancy Greenings of medium size free from scald brought as high as \$7.50. Ordinary stock went as low as \$4.50 per bbl. There were very few fancy well-colored Baldwins available.

Wholesale prices, barreled stock, A grade, 2½-inch, at New York, April 12, were:

	Best	Fancy	Ordinary
Baldwins..	\$5 @5.25		\$4 @4.25
Greenings..	6.25@7.50	6.75@7.25	4.50@5
Ben Davis .	3 @3.75		

STORING HELPS EGG MARKET

After the very dull period in the week following Easter, the egg market picked up again last week. Buying for cold storage became more active, and the receipts in the large markets fell off considerably. The decline in shipments to large markets is explained chiefly by the fact that in the middle Western sections attention is being given largely to storage packing and the proportionate quantity of eggs that is going into storage at country points is greater so far than at large markets.

The stock of eggs in cold storage on April 12 this year in the four large markets was only 441,979 cases, as compared with 988,136 cases at this time last year, and a still larger amount at this time in 1921. In New York City the cold storage stocks on hand April 12 were 243,054, as compared with 390,879 at the same time last year. Receipts of eggs at New York were 104,278 cases last week, compared with 186,116 cases in the corresponding week last year, and the receipts at New York since January 1 were 2,124,985 cases,

compared with 2,170,717 cases during the same period in 1922.

BUTTER OUTLOOK GOOD

Some dealers think there will still be a shortage before the spring increase in production, that will cause stiffer prices. The demand is very satisfactory. The wholesale trade is generally cleaning up its floor daily. The big chain stores are selling retail at a very small margin over wholesale prices, which tends to encourage consumption. There were altogether in public warehouses at New York only 1,043,546 lbs. of butter on April 12, compared with 1,576,886 lbs. the same date last year. Receipts are running around 30,400 lbs. per week.

BROILERS TOO LIGHT

Receipts of live spring broilers by express last week were liberal, but toward end of week they sold quite actively and at fairly good prices. Many shippers have been sending too light-weight broilers to market to get good prices, some weighing as little as one-half pound. To get best results, broilers should be 1¼ lbs. or more, and it is

QUOTATIONS FROM EASTERN MARKETS

The following are the prices at which farm products of special interest to eastern farmers sold on April 12:

Eggs, Nearbys (cents per dozen)			
New Jersey hennery whites uncandled, extras...	36 ½ @ 37

Hogs, Yorkers.....	9 @ 9 ¼	8 ¾	

a mistake to send any less than ½ lb. They should be carefully sorted as to size and weight so that each coop is as uniform as possible.

LIVE-CALF RECEIPTS HEAVY

The receipts of live calves at New York last week were heavy and the demand moderate, which resulted in a decline of prices toward the end of the week. Strictly choice veal calves sold at \$11 per cwt. in the middle of last week, but declined on Thursday with a top price of \$10 per cwt. On Wednesday, other grades ranged from \$10.50 down to \$6 for very common and small calves brought \$3.50 to \$4.50 per cwt. The day following, medium grades sold considerably lower and small calves dropped down to \$3 to \$4. The demand for the best quality of live calves, however, was about sufficient to clean up supplies.

Choice clipped live lambs sold on April 12 at \$12.25 per cwt., which was an improvement over the market earlier in the week. The best unshorn lambs did not bring over \$14 to \$14.50.

Live hogs declined slightly early last week and then continued steady.

CHOICE VEALS SCARCE

The receipts of country-dressed veal calves at New York last week continued to be heavy of the medium grade, but choice veals were comparatively scarce. Toward the end of last week the tone of the market for average quality dressed calves was weak and the prices irregular. Really choice veals, however, were sold at 15 to 16¢ per lb., with

some very fancy occasionally bringing even higher prices in a small way. Prime veals sold largely at 12 to 13¢, and poor to fair grade 9 to 11¢, with very common and small at still lower prices.

Country-dressed lambs were in light receipt early last week, but somewhat heavier toward the end of the week. The finest hothouse lambs of desirable weight sold as high as \$11 per carcass. The lower grades toward the end of the week sold at a wide range of from \$3 to \$8. There were practically no receipts of country-dressed pork from nearby sections, and prices of 15 to 17¢ for pigs, light to medium weight, per lb., were nominal.

HAY MARKET STEADY

The market for hay and straw at New York was steady last week, and there was very little change in prices. Shipments to 33d Street on the New York Central were light, and shipments reported on the way were not heavy. There was very little accumulation of stock in the market. Rye straw was scarce and prices for it firm. Oat straw sold slowly. Hay shippers

are urged to comply with the requirements of the New York State laws in tagging each bale of hay or straw with a cardboard tag with large legible figures, giving the exact weight of the bale.

FEED MARKET STRONGER

There was much more activity in feeds at Buffalo last week and the market was firm with a tendency toward higher prices. Nearly all feeds advanced over the previous week except gluten feed and cottonseed meal. Quotations per ton in 100-lb. sacks, carlots, Buffalo rate basis, April 11, were:

Gluten feed, \$40.05; cottonseed meal, 36 per cent, \$44.75; cottonseed meal, 43 per cent, \$51; oil meal, 31 per cent, \$40.50; standards spring bran, \$34.25; hard winter bran, \$34.75; standard spring middlings, \$33.75; choice flour middlings, \$36; white hominy, \$33.55. No. 2 yellow corn per bushel, 92¾; No. 2 white oats, 54½¢; barley feed, 72 @ 76¢; No. 2 rye, 90¢.

WINTER WHEAT OUTLOOK

The forecast of the smallest wheat crop in five years, issued by the U. S. Dep. of Agr. last week, naturally tended to strengthen the market for wheat and all grains. "Owing to extensive drought or scanty rainfalls last fall and winter in many sections," the report said, "much wheat failed to germinate." The severe winter has injured much of that which did grow. In some Western States the condition ranges from 50 per cent to complete failure. The estimate of April 1, is 76.2 per cent of normal for the coming season or about 572,317,000 bushels.

The speculative future market was very "bullish" as a result of this information and even cash spot grains advanced considerably. Prices on cash grains, April 12, follow:

New York—No. 2 red wheat, \$1.52¼; No. 2 hard winter, \$1.37¾; corn, 2 yellow, \$1.02; 2 mixed, \$1.01½; 2 white, \$1.02; oats 2 white, 57½¢; white clipped, 56½ @ 59¢; fancy white, clipped, 59½ @ 61¢; rye, 95½¢; buckwheat, \$1.86 @ 2.10. Chicago—corn, 2 white, 82½¢; 2 yellow, 82½ @ 83½¢; oats, 2 white, 47½ @ 48¢; rye, 86½ @ 87¢; barley, 62½ @ 71¢.

Pure Bred vs. Good Bulls

(Continued from page 363)

Laura gave an average of 3,607 lbs. of milk a year during five lactations. Her half-Holstein daughter, Lotta, gave an average of 7,340 lbs. of milk for five lactations.

Her three-quarter - Holstein grand-daughter gave 9,598 lbs. average for two lactations.

Her 15/16 - Holstein great-grand-daughter gave only 4,850 lbs. average for two lactations. All the daughters of the sire of this last cow were about equally bad, although the sire was pure bred, and probably would have brought more than most dairymen would be willing to pay for a sire to head the herd.

I am not giving these instances for the purpose of proving that grades are better than pure breeds as sires. I do not think they are. I do, however, think that the cream of grade bulls are preferable to the skim milk of pure breeds, and the skim milk ones are all too often the one the average dairyman buys.

The Up-to-Date Farmer is also an Up-to-Date Business Man

THE farmer who writes his letters on the Underwood Portable stamps himself as an alert, progressive, up-to-date business man. Just as important, he saves his own time and energy.

It takes surprisingly little practice for any man or woman to write rapidly and neatly on the Underwood Portable. This compact, handy little machine is specially designed and built for home use—use by people who never studied typewriting or went to business school. Into its

sturdy construction go all the experience and skill of the makers of the world's Standard Typewriter.

The Underwood Portable not only writes letters, but is a great help when it comes to making out orders, reports, tax returns, and all the other records that are a part of farm management today. Underwood typewriting is compact, readable and permanent. And it's useful to have carbon copies of everything you have written.

Immigration Not The Remedy—By G. F. Warren

Cooperation and Orderly Marketing

President of New York Farm Bureaus Talks to 500,000 People by Radio April 18

By ENOS LEE

THE comparative recent growth of co-operative organizations by producers on a commodity basis here in the East may raise a question in the minds of people, particularly consumers, as to just what the advantages of this method of marketing may be. While farmers have been discussing cooperation for years, the great war and its subsequent activities, both during the war period and in the readjustment, together with the growth of the Farm Bureau movement, have stimulated the present activity of cooperative marketing. The farmer is for the most part a conservative man, and the application of new and untried methods in his line of business therefore comes more slowly. He must not lose his identity as an individual, for around him and his family is built the rural home, which is an institution which must ever be preserved in our national life. A peasant population producing the food of the nation might do it at a less cost, but the cost in citizenship would be something never regained in any other way.

Necessity is the mother of cooperation, and for that reason our Western friends were more active for a time in the field of cooperation. Their distance from market, which involved transportation difficulties, created the necessity. The producing units on the average are smaller in the East, and this with other conditions make the work of organizing cooperatives here more difficult. We ordinarily look for progressive

ideas from the West, and these, tempered with the conservative Eastern, though, have always worked out a solution, for the time being at least, of most of our problems. This has held true with regard to cooperative marketing as in other lines of business, or thought, or government.

New York State has a cooperative organization for the selling of milk and milk products, fruit, potatoes, maple sap products, wool, canning crops, hay and poultry products. Other Eastern States have similar organizations to a greater or less degree. Aaron Sapiro, who is very largely responsible for the success of the California and Western Coast associations, is in the East at the present time assisting in the particular work. Very recently he has met with the people interested in the potato industry of Maine and in New York State. From present indications, the next few years will see practically every commodity which is grown to any extent being marketed through organizations set up along cooperative lines.

The Farm Bureau, as an organization, is not directly connected with these associations, but has very largely made it possible for them to come into being. It has the personnel and equipment whereby surveys can be made and information gathered on which a true basis of facts can be secured. We believe that each cooperative should, gener-

ally speaking, stand on its own feet, and it is more charitable to help them help themselves rather than for them to be carried along on the success or failures of all the others. The Farm Bureau should not and does not engage in any commercial activity. However, since it is fundamentally an educational institution, it can and should lend its efforts toward the orderly marketing and transportation of farm products as well as to the production of the same.

This movement for orderly marketing should be, and I believe is, being welcomed by bankers, merchants, transportation agencies, and the ultimate consumer. It makes for the elimination of waste, simplifies transportation, standardizes grades, and insures a reasonable supply at all seasons. Recent national legislation, together with bankers' associations, have made it possible to properly finance the movement of crops. Merchants' associations and chambers of commerce are lending their services, together with the Farm Bureau, to assist any reasonable and sincere effort to better existing conditions. Transportation facilities, railroads, waterways, and motor transport look with favor on any movement which can aid them in carrying products from shipping point to destination, and I believe the consumer, which means all of us, will see the result in the quality and quantity of the products and service we buy, and we can and will receive value for value given.

Radio Fishin'

Was The Editor "Frying Steak," or Making A Speech?

By A. A. READERS

DEAR EDITOR ED: I had a experience last night that I wanted to tell to your large fambly of readers. I ain't no writer, so I give you leave to change the artikel any way you see fit. With your permission I will sale rite a head.

Wall, in the first place I seen in our lokal weakly paper a artikel telling that Ed Eastman, the editor of the good old American Agriculturist, was to make a radio talk last night. Now I have known Ed a long time. He ust to stop at our house, generally on Fridays, and eat codfish and potatoes with us, and I thought it ud be fine if I could heer him make this talk. So last Wednesday night, about seven o'clock, I dropped into a friend's house where he had a home-made radio and showed him the artikel in the paper, and asked him to hook her up so I cud heer Ed talk. Doc, my radio friend, looked kinder funny and said: "Say, do you know anythin about this radio buziness?" I said "No."

Then he went on to explane how ther was somethin like 400 broadcastin stasions in this country, and every night, almost, they was all shootin out this radio stuff in the air, and that he ud be lucky if he cud tune in on Eds talk without gettin all tangled up with the other 399. He said the air was jest full like the ocean with about 400 diferunt kinds of fish swimmin round in it, and what I had ast him to do was to catch one pertikler lobster without hookin any of the other 399 fish. After he told me that, it looked kinder complekated to me, but he said heed try it. I saw him do somethin under the table where the radio box was, and 3 little lectrik lights lit up in the contrapsion, and right away we heard a scrapin and whistlin comin out of the big horn that stuck up above the box on the table. Then he started "fishin," as he called it, which he done by turnin two little nobbs in the front of the box

where the lectrik lights were. As matter of fact, sounded more like some one was fryin fish than fishin, to me—might have been steak fryin in the kitchen of the broadcastin stasion.

Pretty soon we heard a banjo playin, and by gum! that feller cud play to. My foot got to twitchin, and jest as I was goin to stand up sos to git more knee action some feller somewheres else begun talking about his Uncle Wrigleys whiskers. Doc, my radio friend, says: "It is haf past seven and this is a bedtime story from Springfield." Wall, after listenin to him a while I begun to get kinder sleeply myself and wondered when Eds talk would get caught in the machine. The newspaper artikel said Ed was to talk in W E A F at 7.30 p. m. on 400 meters. I did not know what that was, and anyway it was now past 7.30 p. m. and Doc said he was afraid he cud not tune in rite. Wall, all we had heard so far was tunes and that pesky story-teller, who kept buttin in, and I got kinder discouraged myself.

Doc says: "How'll we know now if I do get Ed?" And I said: "Don't worry; I know Eds voice rite well." When he ust to come to our house he always ud sit down at the pianer and sing 'Home, Sweet Home,' and 'Swaney River,' and such good old tunes, and I ud know his voice anywheres."

Wall, Doc kep on with his fishin and then all of a sudden we heard a big, deep voice talkin about the Rural School Bill. I hollered "Whup! Let her lay. Thats Ed," and then I hollered in to the horn "Hello, Ed," but the statik was not workin rite or else Ed was afraid of losin his place in the speech he was readin, because he did not seem to hear me and kep rite on talkin. It did not sound like Eds voice after all, but I felt it

must be his'n because he always likes to talk about that "Committee of 21" of his'n. It seemed that ther had been some kind of a joint meetin in Albany that afternoon on the Rural School Bill and Ed was just primed full of the subjeck.

Then he got to talkin about the San Jose Scale, which is a nother favorite subjeck of his'n. Wall, it was all very interestin, and he wound up by askin his great fambly of readers to watch out for the April 14 issue of the good old American Agriculturist because he was puttin in some questions he wanted us all to anser. I told him "I would watch out for it," and then he stoped talkin and a nother feller butted in and said the talk he had jest heard was made by E. R. Eastman, editor of the American Agriculturist, so then I knew for shure that Doc had got the rite lobster, even if it did not sound like his voice.

A number of your Interlaken friends had their radios tuned for W E A F last night and heard your address, among them "yours truly."—T. P. H., Seneca County, N. Y.

The opening agricultural radio talk of the American Agriculturist reminded the writer of some San Jose scale-infested currant and gooseberry bushes and a couple of fruit trees in the back yard which will now have attention.—H. G. H., Swampscott, Mass.

DEAR MR. EASTMAN—After "listening in" to your talk on the radio the other evening, I feel that I must write and tell you how much I enjoyed it. I especially wish to commend you on the simple, straightforward manner in which your talk was delivered. It certainly imparted useful information—a thing which cannot be said of most radio talks.—ERNEST ZADIG, New York.

Immigration Not The Remedy

For Overcoming The Shortage of Labor That Farmers Are Now Facing

MUCH discussion concerning the effects of immigration on agriculture is going the rounds. Often it is not based on facts. Before discussing the effects of the present law, it is desirable to find out what the facts are.

The facts are given in the report of the Commissioner General of Immigration and in various press releases. For many countries, the number of immigrants who desired to come to the United States in 1922 was not so large as the law would allow. Many more Austrians, Danes, Swedes, Norwegians, Hollanders, Germans, Englishmen, etc., would have been admitted had they desired to come. The law checked the admission of Greeks, Hungarians, Italians, Rumanians, Armenians, and Turks. The countries from which more people would have been admitted had they desired to come are as follows, with the percentage of the possible number of immigrants who came to the United States in the year ending June 30, 1922:

	Per cent
Austria	64
Denmark	58
France	76
Germany	28
Netherlands	67
Norway	49
Russia	84
Sweden	44
United Kingdom	55

Some countries from which immigration was checked by law:

Bulgaria, Czecho-Slovakia, Greece, Hungary, Italy, Belgium, Poland, Rumania, Jugo-Slavia, Armenia, Palestine, Syria, Turkey, Africa.

Data up to February 7, 1923, which is a little over seven months of the present year, indicate that the law will admit many more Danes, Norwegians, and Germans than desire to come. Judging by the present indication, the Swedish, English, French, and Holland quotas may not quite provide for all who desire to come. The immigration from southern Europe will be checked as it was last year.

Opinions About Immigration

Facts and opinions about immigration should be clearly separated. The above are some of the facts. The writer is of the opinion that we ought some time ago to have adopted constructive policies on the immigration question rather than to allow matters to drift. Those who have studied the question believe that the immigrants should be inspected in foreign countries and not allowed start for this country until they have passed such physical and mental tests as would indicate their acceptability in this country. It is an injustice to the immigrant to have to cross the ocean to find whether he can be admitted. Selection would be more discriminating if done before starting. The enormous expense that the State of New York is carrying in maintaining foreigners in our State institutions is an indication of the need of much more careful selection.

By G. F. WARREN

In so far as restriction of immigration from southern and eastern Europe makes the opportunities for immigrants in the United States better, it encourages immigration from northern Europe. It is certain that more Canadians, English, French, Germans, Dutch, and Scandinavians are coming than would come if immigration were not restricted. In short, the restriction law is a restriction to southern and eastern Europe and a stimulus to northern and western Europe. The quality of the immigrants now coming is much above the average that came before the restriction law was passed.

A Constructive Immigration Policy

A CONSTRUCTIVE immigration policy would appear to include: Examination, both physical and mental, in Europe, of all prospective emigrants for permission to embark for the United States.

Rigorous enforcement of health tests.

Rigorous intelligence tests to encourage immigration of persons of good intelligence and prevent immigration of persons of inferior intelligence. The army test showed that a large number of such persons have in recent years been admitted. We have enough such in this country now to raise all of the imbeciles and near imbeciles that we need. The increase in our asylums is appalling.

Continuance of literacy tests.

The number of persons who desire to come from northwestern Europe does not seem to be larger than can be quickly assimilated. The number who desire to come from southern and eastern Europe seems to be much greater than can be readily assimilated. These should be restricted to such numbers as can be readily assimilated so that all who come will be absorbed rather than remain as insoluble lumps in our so-called "melting pot." A percentage regulation based on the 1900 census would seem the best means of accomplishing the desired result.

Because of the high wages in cities, some farmers believe if we allowed indiscriminate immigration that it would break the labor market. Since farmers as a class depend more on the labor of themselves and members of their families than they do on hired labor, and depend more on their own labor than they do on the returns from capital, it is to their interests that wages be high. If over a series of years wages remain high, the pay that farmers receive for their own labor will be high. It is very trying to see one's sons and hired men go to the cities and receive very high wages at a time when farm products are low. It is not in the interest of farmers to have country and city wages out of adjustment, but it is in their interest to have wages high. Adjustment between city and country can be brought about by the movement from farms to cities as readily as by bringing in foreigners.

Effect of Restriction on Agriculture

Other farmers believe that, if we allow free immigration, men will be available to work on farms even though farm wages are out of adjustment with city wages. If it were possible to hire men at wages that are out of adjustment with the industries, it

would be interesting to know just how the prices of farm products would be brought into adjustment with prices of manufactured goods. One who complains that there is an overproduction of farm products is certainly not very logical if he also clamors for more labor.

Comparatively little of the work on farms in the United States is done by persons from southern Europe. Most of the farm hands in this country are native Americans. Some come from northern Europe. Since the present law tends to stimulate immigration from northern Europe, the chance of your having a Swede, Dane, Englishman, or German to work on your farm are better than they

would be if immigration were unrestricted. But, in any event, these chances are very slight. More highly skilled native American farm boys are raised on farms than are needed in agriculture. The best source of additional farm labor is these young men. If the relative supplies of manufactured goods and farm products are so out of adjustment that farm prices are so low that it is impossible to keep these men on farms, it would seem logical to let enough of them go to bring about this till we see what effect. Possibly too many are now going to cities. We cannot be sure about this till we see what effect the present movement has on farm production.

The farmer has another interest in the immigration question. Our own population is multiplying very rapidly. Farm families are so large, and the increase in efficiency of farmers is so great, that there is room on farms for only about one-half of the children who are born there. Where are these children to go? Evidently they must go to American cities. Accurate data are not available, but probably the normal movement from farms to cities is about one-half million per year. Some city opportunities are needed to make places for this surplus farm population.

Effect of Immigration on Public Welfare

This country is no longer thinly populated. There is no longer a supply of readily available good land. The additional production of the future must come from slower and more expensive methods of expansion. Is it not well to leave a few of our resources for gradual development to provide a place for our own surplus population?

Very much more important than the immediate economic effects of immigration are the permanent effects on national welfare. We are all working not only for ourselves, but for our children, grandchildren, and great-grandchildren. We like to accumulate some property which can be left to them, and like to earn enough so that they may have educational opportunities. Is it not just as

VOL. 111 April 28, 1923 NO. 17

G. F. Warren on Immigration

FARMERS do not need to be reminded that the labor situation on farms, none too good since the beginning of the World War, is now worse than ever. According to the United States Agricultural Report, the farm labor supply on April 1 in the North Atlantic States was 23 per cent below the demand. The danger is, in a situation of this kind, that we will be led to advocate taking up remedies that do more harm than good. One of these so-called remedies for the farm-labor supply is the suggestion to let down immigration bars.

Because we are sure such a policy is detrimental to the long-time interest of farmers, we are especially glad to publish as a feature article this time Professor G. F. Warren's article on the immigration question. As most of our people know, Dr. Warren is one of the soundest agricultural economists in the United States. He is the author of the famous Warren Formula.

May we emphasize Dr. Warren's remarks by repeating one or two of them here. He says: "Since farmers as a class depend more on the labor of themselves and members of their families than they do on hired labor, and depend more on their own labor than they do on the returns from capital, it is to their interest that wages be high. If over a series of years wages remain high, the pay that farmers receive for their own labor will be high. It is very trying to see one's sons and hired men go to the cities and receive very high wages at a time when farm products are low. It is not in the interest of farmers to have country and city wages out of adjustment, but it is in their interest to have wages high. . . .

"One who complains that there is an over-production of farm products is certainly not very logical if he also clamors for more labor. Comparatively little of the work on farms in the United States is done by persons from southern Europe. More of the farm hands in this country are native Americans. Some come from northern Europe. Since the present law tends to stimulate

immigration from northern Europe, the chances of your having a Swede, Dane, Englishman, or German to work on your farm are better than they would be if immigration were unrestricted; but, in any event, these chances are very slight."

It seems to us that these statements of Dr. Warren are just plain, logical common sense. The farm-help shortage just at the present time is irritating, to be sure, but, in the first place, immigration will not give us any more hands, as Dr. Warren points out, and, in the second place, more help would enable us to raise more products than the market needs, and thereby continue to keep the prices of agricultural products out of adjustment with other prices.

Money For Condemned Cattle

GOVERNOR SMITH has signed bills providing \$5,000,000 to pay farmers for tubercular cattle destroyed. There are two of these laws. One provides payment for cattle slaughtered during the fiscal year 1922 to 1923; the other provides for cattle slaughtered during the balance of 1923 and the spring of 1924. The money will now be available.

American Agriculturist has called attention to the need of this legislation several times, both in its columns and through its speakers at farm meetings, and with the legislators themselves, and we are naturally very much pleased that we have had a part in working for this much-needed legislation for dairymen. The situation has certainly been absurd whereby farmers who badly needed the money had to wait for so long after their cattle were condemned before the State was in a position to meet the obligation. If the State money for payment of tubercular cattle had been more quickly available in the past, there would be less of such cattle to-day. Passing this legislation is one more step in advancing the campaign to conquer a leading dairy problem.

Let Us Get Together

ON April 17 representatives of many of the farm organizations had an informal conference at New York with the Executive Committee of the New York State Chamber of Commerce for the general purpose of bringing about a better understanding between city and country, and particularly to discuss the terminal and market facilities of New York with the view of suggesting remedies that would improve them.

The thought was emphasized several times that city people have little idea or appreciation of the farmers' problems; and, vice versa, there was more or less understanding on the farmer's part of city folks and conditions. This misunderstanding is not only bad from a social standpoint, for, whether we live in the city or country, all are human beings with many of the same problems, and the majority are American citizens. But it is particularly bad from an economic standpoint, for a better appreciation of one another's problems will do much to put all back of a program to give farmers more for their products and help consumers get more reasonable prices.

Arrangements were discussed for regular conferences several times a year between representatives of the Chamber of Commerce and other New York business men, and leading farmers and representatives of farm organizations. This preliminary conference was well worth while from this standpoint alone, for regular meetings between leaders in the country and city will lay the foundation of knowledge of each other's problems, and may lead to action that will help to solve those problems.

Terminal market facilities received a large amount of discussion at the conference. One

speaker said that bananas, raised thousands of miles away in Central America, were transported to New York, sold on the docks to retailers at auction sales, and then sold from the pushcarts in the city streets for fifteen bananas for twenty-five cents, or for less than two cents apiece. On the other hand, apples grown in our own country, some of them within two hundred miles of New York City, sold from the fruit stands for from five cents to fifteen cents apiece. The difference is largely caused by the way the fruit was handled in the markets after it reaches the New York City terminals.

Several of the speakers thought that the situation might be much improved by selling carefully graded fruit and products at auction sales at the terminal markets, but all agreed that the first step to this, or to any kind of improved market conditions, was better grading on the farmer's part of everything he offers for sale. The market success of the western fruit growers has been largely due to the fact that the dealers in New York know that the apple on the bottom or in the middle of the barrel was of the same quality and size as the one on top, and the same principle of careful grading applies to every farm commodity.

The great problem of marketing all farm crops starts after the produce reaches the terminals. There is not much that can be done in the way of reducing transportation costs up to the time the produce reaches the city. The problem is, therefore, a city problem, which can best be solved by closer cooperation and work between the city business men on one side and the farmers and farm organizations on the other.

Potato Growers Organize

AS we reported last week, the Empire State Potato Growers' Association met with Aaron Sapiro to consider plans for perfecting their organization and more orderly and profitably put their potatoes on the market. Mr. Sapiro has just come from Maine, where an association has been organized to bring a large part of the Maine producers together. This organization will grade and store the crop through the locals, and will regulate its deliveries to the buyer through a central sales and merchandising office. The Maine growers' operations will be cooperatively financed on a broader scale, and it is hoped that all will profit by the cooperative plan for more orderly marketing.

Both of these movements, toward better marketing in New York and Maine, are in the right direction. There is much opportunity for marketing potatoes to good advantage from the growers' standpoint, but the movement will take a lot of time, ability, and hard work, both on the part of capable leaders and of every member. There will be stumbling blocks and disappointment. We believe a word of caution is wise against the danger that overenthusiasm may lead both producers and consumers to expect too much from their organizations, particularly during the first two or three years, while they are getting started.

Look Out For Foreign Alfalfa Seed

ACCORDING to the United States Department of Agriculture, 3,780,300 pounds of seed alfalfa were imported in the United States from July 1, 1921 to March 31, 1922. For the same length period ending March 31, 1923, 8,094,700 pounds of seed alfalfa were imported, or more than twice as much. As much of this imported seed alfalfa is southern grown, and therefore not good for northern conditions, it is unfortunate that such importations are increasing. Farmers will need to take extra care to see that foreign alfalfa is not included in their seed purchases.

The Decline of Agriculture and a Remedy

President of the N. M. P. A. Speaks to American Agriculturist Radio Audience

THAT agriculture is the basic industry is conceded by all. Destroy our cities and the farms will build them again. Destroy our farms and ships will rot at the wharfs; spindles will cease to hum; grass will grow in the streets of the cities and our proud American civilization will perish.

The process of readjustment since the war, including as it has the deflation of currency and of credits, has imposed upon agriculture a burden greater than upon any other industry.

This process of readjustment will, however, in due time, be complete. The burdens flowing directly from it will in due time be equalized, but it still remains that other grave problems must be solved by the American farmers. Before the war there was a gradual, steady decline in agriculture in that it did not increase as did the population of the cities. This resulted in the supply of food becoming less and less as compared with the demand. The causes of this prewar decline still exists and will continue to exist after the period of readjustment of war conditions has ended. All the people, both in city and country, are therefore directly interested in knowing the causes of this decline and what, if any, remedy may be applied to correct it.

This decline cannot be attributed to lack of efficiency in the farmers as producers. They have been quick to adopt every improved method that decreases cost of production, and it is not extravagant to state that the American farmer is as efficient as any farmer in the world. We must, therefore, look elsewhere for the cause of this decline.

Those engaged in other industries consider rightly that it is as necessary to efficiently market as to produce their respective commodities. Owners of coal mines have built railroads to market their coal. Vast aggregations of manufacturers have sales agencies in the principal cities of the civilized world. The greatest industrial movement of the last half century has been the centralization of the control and operation of industries. These organizations not only collectively produce but collectively sell, and it is from them that farmers must buy their supplies. Meanwhile there has also grown up other great organizations engaged in the processing and distributing of farm products. Growing with the growth of the cities, they have become powerful, and, with their far-flung financial, commercial, political, and social connections, stand like a stone wall between producers and consumers. Farmers having no other means of marketing have heretofore been compelled to sell their products to these organizations. As a result of these movements, farmers are now the one great group that sell their products at wholesale, buy their necessities at retail, and in both cases at prices determined by others. No other industry thus

By JOHN D. MILLER

handicapped could long survive. In selling their products, farmers have found that the law of supply and demand has been nullified

objectives of the farmers in acting together through associations to market their products is to control such products until they reach the points of consumption where prices are determined by nation-wide and even world-wide conditions.

Another result of old methods is the growing disparity between the prices received by farmers and the prices paid by city consumers. That farmers receive less than six and one-half cents a quart for milk and city consumers pay fifteen cents a quart for it is a grave indictment of present conditions.

From all this it follows that farmers and city consumers are alike interested in such improvement in marketing methods as will permit the farmer to receive all that the consumer pays, less only the actual cost of processing and distribution.

Farmers are now awake to the necessity of this and are seeking to improve conditions by acting together in marketing their products. The economics of agriculture are such that farmers cannot produce collectively, but they should from that point on, both in their own interest and in the

interest of city consumers, jointly market their products. Singly, they cannot create or maintain efficient marketing agencies. This requires large investments and the employment of men skilled in merchandising.

As applied to the dairy industry, it may be stated that the objects of these marketing associations are, first, to assure the farmer of a market for his milk every day in the year, and, second, that the prices that they receive shall be the prices as from time to time are determined at the points of consumption instead of at the points of production. Only by doing this can farmers discharge the duties they owe to themselves and to all the people.

These organizations have not been formed nor are they operated in a spirit of hostility to anyone. They are simply the means adopted, and the only means that can be adopted, by which farmers may follow the example of those engaged in other industries in mobilizing their financial strength to create adequate marketing agencies. Nor does this mean increased prices to consumers as in the long sweep it will mean lower prices to consumers, and, what is of great importance, will do much to insure adequate future food supplies. This movement means that the time is short in which speculators and gamblers can continue to manipulate the prices of the people's food; it means the elimination of unnecessary middlemen and that those performing necessary services shall continue to function only on the supreme condition that they do so economically and at a fair profit.

As a summary of it all, it may be stated that the problem of food production and distribution is not

(Continued on page 378)

An Interesting Program

FARM people are talking about our radio service. Quite a few are writing about it, but not enough. It is an unfortunate fact that one of the reasons why city people get more things than farmers is that they are more expressive and make their influence better felt. Farmers are just as appreciative, but they simply do not get around to write letters. As an illustration, the broadcasting station WEAJ receives literally thousands of letters every week about their programs and although there is a large number of radio sets in the country, very few of the letters come from country people.

The future of radio is now in the making. We are trying to give the farmers a part in it. E. R. Eastman, Editor of American Agriculturist, talked on the possibilities, from the farmer's standpoint, of the radio, on Wednesday, April 11. Enos Lee, President of the New York State Farm Bureau Federation, spoke on "Cooperation and Orderly Marketing" on April 18. John D. Miller, of the Dairymen's League Cooperative Association and President of the National Milk Producers' Federation, talked to farmers on April 25. On May 2, at 7:30, Mrs. A. E. Brigden, President of the New York State Federation of Home Bureaus, will speak.

Now here is the point. In nearly every farm community, someone has a radio receiving set. Why not have a neighborhood gathering on Wednesday evenings, and listen to our program? Also, and this is very important, note the questionnaire on this page which we printed once before and if you have a radio and have not already sent in this questionnaire, won't you please fill it out and send it in immediately? If you do not have a radio, hand it to someone who has. Write us a letter stating what you think about what we are trying to do, and whether this service should be continued.—The Editor.

in that prices to them are determined by the supply and the demand at the point of production, where the supply always largely exceeds the demand, and one of the great

EVERY DAY on YOUR FARM

there is a job
for this Sprayer—

You can get more days of profitable work out of this sprayer than from any other tool on the place. You won't neglect that important job of spraying, whitewashing or disinfecting, when you can do it so quickly, easily and effectively with a

SMITH BANNER
No. 22
COMPRESSED AIR SPRAYER

For spraying against insects and fungus on fruit trees, potatoes, vegetables, gardens, shrubs, berries, grapes, flowers; sprays whitewash, paint, Carbola and disinfectants in poultry houses, stables, barns, washes windows, autos and buggies.

Built to stand hard service and strong chemicals. Heavy 4 gallon galvanized steel or solid brass tank; 2 inch seamless brass pump; all brass castings. Few strokes of pump compresses air to discharge contents of tank; fine mist or coarse spray; brass automatic, non-clog nozzle—no work—just press nozzle handle—acts "Quick as Lightning."

Ask your hardware or implement dealer—you will be surprised at the low price; to avoid disappointment refuse substitutes; insist on the genuine Smith Banner—if he cannot supply you write us for price catalog of over 60 styles of sprayer.

D. B. SMITH & CO.
Manufacturers of Quality Sprayers
Since 1886

80 Main Street, Utica, N.Y.

The name SMITH on a sprayer is a guarantee of lasting quality and satisfaction, or money back.

PLANT LESS ACRES AND GROW MORE POTATOES

League Price for May \$2.33

Farm News from Albany—Eastern States Meet

THE Dairymen's League Cooperative Association, Inc. has voted the following prices for the month of May:

Class 1, for fluid consumption, \$2.33.
Class 2, for cream and ice cream, \$2.05.

Class 3, for milk used chiefly in the manufacture of evaporated, condensed and powdered milk and hard cheese, a differential of 59 cents above the price of milk going into the manufacture of butter, the same as for April.

Class 4, for milk used in the manufacture of butter and cheese, will be determined by the New York market quotations on these commodities.

The April price for Class 1 was \$2.80; for Class 2, \$2.50. The directors decided upon the decrease for two reasons—the increased seasonal flow and competitive conditions in the New York market.

FARM NEWS FROM ALBANY

The Legislature will adjourn May 4.

A bill is before the Legislature to amend the Membership Corporations Law to provide that cooperative associations may become members or stockholders in any other cooperative association whether organized under the Membership Corporations Law or under the cooperative law known as Article 13-A. This bill also provides for making contracts with producers for a five-year period with option for renewal for like periods by mutual agreement between the parties.

It provides, furthermore, for filling vacancies by the Board of Directors until the next regular meeting. It gives greater powers to the organizations now existing under our present cooperative laws and allows the tying of the members in so that the organization will have a longer period to get well established in business. On the other hand, if the organization was not properly managed the bill would make it more difficult for the members to change their directors and officers, and more difficult for them to withdraw.

Another very important bill affecting the cooperative law provides for the issuing of bonds or preferred stock where new or additional capital is required, paying a rate of interest not exceeding 8 per cent. This would allow the establishment of some cooperative enterprises without the investment of so much capital by the farmers themselves. On the other hand, it might give outsiders who made the investments opportunities for getting the control of the cooperative away from the farmers themselves.

This bill also provides that the annual report made by the auditor of the association shall be filed with the Department of Farms and Markets, as it now is, but in such a way that the report cannot be identified as having been furnished by the association. These annual reports now are public property. This provision would keep business information from competitors, but would also make it more difficult to obtain accurate information as to the finances of any cooperative.

A bill providing for the joint administration of the Cornell Agricultural College and the Geneva Experiment Station has passed the Assembly and is now pending in the Senate Committee. The only opposition to this bill comes from the city of Geneva, which fears that some of the activities of the station might be removed from Geneva to Ithaca. The consolidation has the approval of Dean A. R. Mann of the College of Agriculture, and Dr. Roscoe Thatcher, director of the Experiment Station, and the trustees of both institutions.

A third bill bearing on indemnities for slaughtered tubercular cattle has passed both Houses, and is before the Governor for his signature. This bill provides funds for payment of slaughtered cattle during the fiscal year 1923 to 1924. It is expected that the three bills, the first two of which have been previously reported, will pay for in-

demnities for slaughtered cattle until June, 1924.

A movement is on foot to try to arrange for a demonstration with a large load of apples to be brought through the Barge Canal to New York City with the idea of showing the value of the Barge Canal for such purposes. It is hoped by holding such a demonstration to interest Governor Smith sufficiently to get his backing for the \$30,000 appropriation for the big Fruit Show planned for New York next fall.

The Esmond Bill, which seeks to amend the Highway Law so as to provide state aid to counties for snow removal on highways, was reduced to third reading in the Senate. It has already been passed by the Assembly.

The Assembly has passed one of Governor Smith's reconstruction bills proposing the constitutional amendment to consolidate 180 State departments and bureaus into 20 major departments and reducing the number of elective State officers from seven to four. As this bill is recommended by the Governor, it is now certain to become a law, so that the proposed amendment will be submitted to the people of the State.—BY OUR SPECIAL CORRESPONDENT.

EASTERN STATES MILK PRODUCERS MEET

The Eastern States Milk Producers, Inc., a group of farmer-owned milk plants controlling the output of 25 plants and stations, held their annual meeting on April 16 in Utica, N. Y., at which time plans were made for the coming year's business.

The officers elected for the coming year are M. G. Garlock, President; F. L. Pinckney, vice-president; C. M. Bull, second vice-president; Roscoe Sargent, secretary, and B. J. Shaut, treasurer.

The directors for the coming year are: M. G. Garlock, Indian Castle Dairy Corporation, Utica; F. L. Pinckney, Onondaga Milk Producers' Co-op., Syracuse; Roscoe Sargent, Laona Milk Corporation, Sandy Creek; B. J. Shaut, Little Falls Dairy Co., Little Falls; Gordon Law, Middleville Milk and Creamery Co.; J. L. Ingersol, Glen Mohawk Milk Association; John Cooper, Bullville Milk Producers' Association; F. E. Gouse, Prospect Cooperative Milk and Cream Co.; J. Saunders, St. Johnsville Dairymen's League Association; B. J. Van Alstine, Canajoharie Milk Co.; Martin Herman, Callicoon Cooperative Dairy Association; E. H. Peet, Addison County Cooperative Dairy Co., Middlebury, Vt.; C. M. Bull, Farmers' Cooperative Milk Co., Poughkeepsie, N. Y.; Scott Hinckley, Cold Spring Creamery, Rosburg, N. Y.; Burton Archibald, New Kingston Cooperative Creamery, New Kingston, N. Y.

The Decline of Agriculture and a Remedy

(Continued from page 377)

simply one created by the war, but is a continuing peace problem and that only by the success of these cooperative marketing organizations can the decline in agriculture be checked. Farmers will welcome the cooperation of city consumers and urge that they acquaint themselves with that which the farmers are trying to do. These organizations are constructive—not destructive. They are not tearing down, but building. They are created for self-help and for mutual help, thus stimulating the initiative of their members, while the increased returns to farmers will stimulate production and the enlarged volume of their products entering the arteries of commerce will enrich the lifeblood of the nation, may long postpone the day when this country shall cease to be self-sustaining, and, by enlarging the buying power of forty million people, bring increased prosperity to all industries.

FOR early maturing, winter-proof alfalfa, insist upon Lyman's pure Grimm. Endures year after year, yielding full, perfect crops.

Lyman's Genuine Grimm Alfalfa

Three to four stands each growing season. All seed scarified, assuring highest germination. Affidavit of genuineness with every order.

Write for free seed sample and booklet describing origin of Lyman's Grimm Alfalfa.

Baker Heads New Jersey Extension Service

THE New Jersey Agricultural College has called Prof. H. J. Baker of Connecticut to fill the position of Director of Extension in New Jersey, left vacant last January by the death of Prof. L. A. Clinton. Professor Baker, since 1915, has been Extension Director with the Connecticut Agricultural College, a place which he will leave on June 1 to accept the new work in New Jersey. He comes into the State well fitted both in education and experience to fill one of the most important places in the farm leadership of the State.

Professor Baker was raised on a Delaware farm, later completing his education and college work at the Massachusetts Agricultural College. Immediately following graduation, he continued association with the Massachusetts College as assistant to the Director and also as assistant instructor in agronomy. Later he became head of the extension work in farm management in that State; then State County Agent leader. During the war Professor Baker was in the army educational work in France.

Duroc men in New Jersey and Pennsylvania have been invited to compete in a \$600 futurity which will be conducted by the Trenton Fair next September. It is for Duroc spring pigs born after March 1 of this year. Nominations must be made with the Fair Association before June 1. The Interstate Fair Association of New Jersey contributes \$300 in prize money. The American Duroc Jersey Association offers \$150, and the Mercer County, N. J., Duroc Association another \$150 to be used in nomination fees. County Agent A. C. McLean of Mercer County, N. J., is creating a lively interest in this event, which is the largest single classification for hogs in the East.

Last year's pig show at the Trenton Fair was one of the largest shows in this part of the country, and with the prize money now practically doubled the exhibit promises to be a greater event this season. There will be 16 prizes in each class, which opens the show for even small breeders. The nomination fee for the Duroc-Jersey futurity is \$5 for each sow, and all pigs to be shown in this futurity must be regularly entered with the American Duroc-Jersey Association at Chicago, 30 days before the fair. Not more than three prizes in each class can be awarded to any one exhibitor, and all pigs to be shown must be regularly entered in the fair classes for spring pigs and in accordance with the Fair Association rules.

* * *

The Junior Farm Clubs in New Jersey have recently become interested in a novel pig-raising contest which has as its goal a ton of pork from one litter of pigs. Each pig of a litter when entered in the contest will be marked, and the same pigs must be presented and weighed in seven months from the day they are born. The records and weighing will be conducted by County Club and Farm Agents in the various counties. Every litter that develops a total weight of 2,000 pounds will be awarded a gold medal. Club members whose pigs reach weight of 1,800 pounds will get a silver medal, and those weighing 1,600 pounds a bronze medal.

* * *

A recent survey of New Jersey fruit conducted by the State Department of Agriculture indicates that peaches, apples and berries are in splendid condition and undamaged by the cold spring. This brings considerable optimism to the New Jersey fruit men, who have noted the serious damage in Southern States to peaches, early fruit and vegetable crops. Unless later frost injury develops, the department states, the growers have every reason to expect a fine crop of Jersey peaches, apples and general orchard fruits.

* * *

A recent survey of forest conditions in New Jersey indicates that half of the available forest land in the State is undeveloped, while nine-tenths of all lumber used in New Jersey is imported into the State, as well as two-thirds of all wood products used for manufacturing purposes.

General Motors Trucks

Motorize Farm Transportation With A GMC

Motor truck transportation of farm products is just as essential today to profitable agriculture as horses were in comparison with oxen.

And the best way to insure real economical trucking on the farm is to use GMC. Not alone because of the economical initial cost and the remarkably low operating expense of GMC trucks; not because of their exceptional accessibility and refined construction, but also because GMC trucks deliver better transportation over a longer period than is averaged by other trucks.

The exclusive features of GMC construction such as removable cylinder walls, removable valve-lifter assemblies, pressure lubrication, and many

others contribute directly to maintaining uninterrupted performance as well as to increasing materially the life of service of these trucks.

Moreover, GMC trucks are complete in every detail, electric lights and generator, magneto ignition, conduit wiring, provision for starting equipment, and complete instrument case are all refinements that are usually found only on passenger cars of the highest quality.

From the speedy, powerful one ton "Jim-Dandy" GMC to the heavy-duty five ton with the famous GMC Two-Range transmission, there is a size for every farm need.

Ask for catalog "Motor Trucks On The Farm."

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

Note these Features

Tank of one-piece galvanized iron with splash partition, solid, riveted joints, 150 gallon capacity. Pump "Red Jacket" or Gould, supposed to be the best pumps on the market. Strainer device. Hose 25 feet long, of 2-inch 4-ply rubber. Standard, approved Brake Rod wheels 54 inches in diameter, 10-inch steel hub. Steel axles. Foot brakes. Tool box under seat. 15 Brass faucets in rear for drawing water, gasoline or oil.

Pennsylvania Farm News

Growers Adopt Standardized Fertilizer Formulas

FOLLOWING the experiments of several states last year, Pennsylvania farmers recently agreed upon 13 general and five special fertilizer formulas as sufficient to meet the general needs of Pennsylvania farmers. This number of fertilizers, according to Dr. J. W. Kellogg, Chief of the Bureau of Chemistry of the Pennsylvania State Department of Agriculture, is in striking opposition to the 140 varied analyses sold in the State last year.

A smaller number of formulas will decrease manufacturing costs, reduce transportation and other overhead expenses.

* * *

The Pomona Grange of Tioga County recently gave \$1,000 to the Pennsylvania State College Emergency Building Fund. This is one of the largest Grange gifts yet made to the college. More than 13,000 people have already pledged \$1,165,000 for buildings at the college, most of which will be those for student health and welfare facilities. Indiana County alumni recently completed their quota of \$15,000.

* * *

The tobacco men of Lancaster County, Pa., report a large acreage of the standard sorts this season, and interest has been keen for some weeks on the matter of securing good seed. The growers have been working closely with the Lancaster County Farm Bureau, which has encouraged the use of several standard varieties and the elimination of sorts which do not come up to market requirements. The County Agent has been responsible for cleaning of several hundred pounds of seed, which it is expected will mean more profitable production for the grower.

POTATO OUTLOOK IN LEHIGH-BERKS DISTRICT

OLIVER D. SCHOCK

It is predicted that the 1923 potato acreage in the famed Berks-Lehigh district will exceed any previous year. More "Russet" potatoes will be planted this season than ever before.

The yield of Pennsylvania potatoes shows an aggregate increase of more than 2,000,000 bushels during the past five years, according to Dr. E. L. Nixon, plant pathologist.

Immigration Not The Remedy

(Continued from page 375)

important for the happiness of our children and grandchildren that the right type of immigrants come to this country as it is that we leave them an inheritance? The American farmer in the South wanted cheap labor so as to earn money rapidly. He brought in the negro. Many of his descendants have lost their money, but they still have the negro. Such an experience ought to be sufficient to warn other farmers against any temporary solution that may have in it future difficulties.

Persons from northwestern Europe are so similar to the majority of Americans in race, social ideas, and ideas of government that they quickly intermarry and are fully assimilated. We can assimilate all of these who desire to come.

Persons who come from southern and eastern Europe are often so different in race and in their philosophies of life and government that they do not tend to accept American ways quickly. They are very slow to intermarry, and many are completely out of sympathy with our type of government. Some of these people are so different from the people of northern Europe that where they have come in contact for many centuries in Europe there has been perpetual trouble. It would seem to be a wise policy not to receive immigrants more rapidly than they can be Americanized and assimilated. It is not in the best interest of the people who live in a country to

have a medley of people. The Balkans are medley enough for one world.

Some persons oppose any restriction of immigration because of the sympathy that they have for the prospective immigrant. But it is not necessary that all immigrants come to this country. There is room for thousands of them in South America. The continent of South America and Mexico in North America were largely settled by people from southern Europe. There is room for many more. These people are developing social and governmental customs that are very satisfactory to them. These customs differ somewhat from the customs that are preferred by the persons from northern Europe. There is plenty of room for all of the Europeans who desire to go to South America so that restriction of immigration into the United States does not close the door of opportunity. There are also many opportunities available in Africa.

Just at present we are having a wave of business activity and great demand for labor. These waves of prosperity are followed by waves of depression. The periods of good and bad times are often approximately two years in length. If we try to bring in enough immigrants whenever we have a period of prosperity so as to hold wages down, we may be sure that we will have these same immigrants in the periods of unemployment which come too soon. Most persons have already forgotten that we had an unemployment conference a little over a year ago, and that we are likely to need another before many years go by.

A number of improvements can be made in the present immigration law, but it is the opinion of the writer that if we return to anything like unrestricted immigration it will be injurious to the farmer and even more injurious to national welfare.

G.L.F. POULTRY RATIONS

Known Ingredients of Known Quality
in Known Proportions

Poultry Feeding specialists at the colleges of agriculture in the territory served by the Cooperative Grange League Federation have approved the formulas of G.L.F. Rations.

Practical Poultrymen using the rations the year around report excellent results.

Feed G.L.F. Rations and you will know just what your birds are eating.

See your G.L.F. Agent or write for booklet of formulas.

The Coop. G.L.F. Exchange, Inc.
Syracuse, New York

Five Distinctive Features:

1. G.L.F. Poultry rations contain a larger variety of ingredients than is usually available in your locality.
2. The quality of the ingredients and the pounds of each are stated.
3. The digestible nutrients in each ration are high and the fibre content is low.
4. Dried buttermilk and dried skimmed milk are used and the animal proteins are high.
5. Accurately operated mechanical mixtures make a thoroughly mixed and uniform ration.

A Beer Keg in the Bull Pen

One Way to Spend Sunday Afternoon

SOME of the older readers of the American Agriculturist may remember, when on occasional trips to town for a supply of staple groceries, seeing enormous trucks loaded with what may best be described, so the present generation may understand it, as miniature molasses barrels.

These small barrels were popularly known as beer kegs. They were used for storing an amber liquid which was formerly much sought after by farm hands and others. Although they have served their purpose, these kegs still may be found, and the other day I heard of a most practical use for them.

For years we have been taught to keep a bull until its daughters were old enough to determine the value of the animal as a herd sire. Where we have done this we have run into some very practical difficulties. The only safe place for a four or five-year-old bull is in a strong pen; kept in this way for very long without his natural exercise the utility of the animal for breeding soon disappears.

To prevent this, various devices have been resorted to, so he might have the necessary exercise. Some farmers use tread powers; others build large yards; and one man I know of hangs a block of wood on a rope from the ceiling of the bull's stall, this block of wood serving as a sort of punching bag with which the bull gets a truly astounding amount of exercise.

None of these devices have seemed practical in our case, and we have been at a loss to know what to do until a friend came along and suggested the beer keg. His idea is for us to simply throw a beer keg in the stall and let the bull do the rest. He assures us that if we will do this the bull will put in most of his time wrestling with the keg and trying to corner it so he can smash it. The keg having been built to withstand considerable pressure from the inside and being slippery for a bull to get hold of, refuses to be cornered or to be smashed.

As a result, says our friend, the bull will get the exercise he needs. We would like to try the idea, but alas, we haven't a beer keg.

I Look Over Some Legume Hay in the Making

I know of no more pleasant way to spend a Sunday afternoon than in an inspection of the fields and crops on a farm. Whenever I can I plan to put in my Sunday afternoon this way. Yesterday I made a particular point of studying last year's seedings of clover and alfalfa.

I went out, I must admit, prepared for almost any sort of a disappointment because the weather for the last month has been about the hardest I have ever experienced for new seedings. The fact that I came back delighted with what I found, I am convinced, is due entirely to the known-origin, hardy seed which we used exclusively for the first time last year.

We first came to a sixteen-acre field of clover seeding. This was put in with rye last spring and the rye and seeding top-dressed with stable manure. Last fall the clover was ten inches high in places and as thick as it would stand. We tried the experiment of pasturing it off and made a lot of milk from it. This spring apparently every clover plant is alive; it would seem to prove that new seeding may safely be pastured if it is not cropped off too closely.

Perfect Stand of Grimm Alfalfa

Next we came to a four-acre field, seeded last spring with wheat to Grimm alfalfa, twelve pounds to the acre. Here we found an almost perfect stand, except in one place, where water had run over the field and left a slight deposit of silt and mud; in this place the alfalfa had apparently smothered out.

Further evidence of the fact that alfalfa will not stand smothering was furnished in the next field, an eight-acre field seeded to 15 pounds of common Northern-grown alfalfa with oats last spring. The oats grew very large, yielding over fifty bushels to the acre.

By H. E. BABCOCK

In some places they lodged, and wherever this occurred not an alfalfa plant could be found.

The really interesting point in the afternoon's inspection, however, came when we struck a gravelly eight-acre field, long considered one of the poorest on the farm.

This field we summer-followed last summer with the intention of seeding it to alfalfa in August. We got behind in our work, and when August came the field was as hard as a city pavement; we had to wait for fall rains and consequently did not get it in until about October 1.

Last fall the little plants barely showed themselves; this spring we find a perfect stand of strong, healthy alfalfa plants. It is the best test of the remarkably hardy qualities of true Grimm alfalfa that has ever come to my attention.

PENNSYLVANIA CATTLE FEEDERS' MEETING MAY 4

The annual Pennsylvania Cattle Feeders' meeting will be held at the Pennsylvania State College on Friday, May 4. At this time the steer-feeding experiments for the year will be concluded and the results announced.

Sixty head of cattle divided into five lots will have been on feed for a period of 140 days at the close of the feeding test. The following rations are being fed this year:

Lot I—Corn silage, shelled corn (full feed), cottonseed meal and corn stover.

Lot II—Corn silage, shelled corn (two-thirds full feed), molasses replacing one-third of the corn in the ration, cottonseed meal and corn stover.

Lot III—Mixed hay, shelled corn (full feed), and cottonseed meal.

Lot IV—Mixed hay, shelled corn (two-thirds full feed), molasses replacing one-third of the corn in the ration and cottonseed meal.

Lot V—Corn silage, corn stover and cottonseed meal.

These cattle were purchased on the Chicago market in December and shipped direct to the College and placed on feed December 13.

An interesting program has been arranged for the occasion. Addresses will be made by cattle feeders, stock yards and packing-house representatives, in addition to the announcement and discussion of the results of the experiment.

MARKET MILK GRADES GET RECOGNITION IN NEW JERSEY

The fight for better city milk ordinances is gaining ground in New Jersey, although State aid along this line requested from the New Jersey Legislature by dairymen this year was not forthcoming. The municipalities of Princeton, Red Bank and Roselle Park, N. J., have recently passed ordinances that will give further guarantees of purity and classification of grades in those cities.

Three market classifications have been recommended jointly by the New Jersey Bureau of Markets and the New Jersey State Department of Health. They provide for certified milk, raw milk from tuberculin-tested cows, and pasteurized milk. Cities which accept this grading require dealers to adopt one or more of the grades. They impose heavy penalties for misbranding. There is no State law at the present time which requires the adoption of these grades by any municipality; the teeth in the fight for standardized grades of milk come from municipality ordinances. Dairymen whose herds produce good milk under sanitary conditions from healthy cows have enthusiastically backed this grading campaign.—W. H. BULLOCK.

I prize the American Agriculturist very much, and have often found in it information which has been very valuable to me in many ways.—Alva Gaylord, Itaska, N. Y.

UNADILLA SILOS

THE gambrel roof of Unadilla Silos insures a full silo when silage settles.

The filling door is at the top which permits the full use of the extra space offered by the gambrel roof.

Silage settles from 15 to 20 per cent. You pay for a certain capacity silo. You get it with a Unadilla Silo and a Unadilla Gambrel Roof.

Write for big new Unadilla Catalogue and learn how early orders earn extra discounts.

Unadilla Silo Company
Box B Unadilla, N. Y.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

REGISTERED O. I. C. AND CHESTER WHITE PIGS. **E. P. ROGERS**, WAYVILLE N. Y.

The Valley of the Giants—By Peter B. Kyne

SHIRLEY'S lip curled. She sensed the hypocrisy between the lines. "He has gone to San Francisco for more ammunition," she soliloquized. "Very well, Unkie-dunk! While you're away, I shall manufacture a few bombs myself."

After breakfast she walked to the intersection of B with Water Street. Jules Rondeau and his crew of lumber-jacks were there, and with two policemen guarded the crossing.

Rondeau glanced at Shirley, surprised, then lifted his hat. "Rondeau," she said, "Mr. Cardigan is a bad man to fight. You fought him once. Are you going to do it again?"

He nodded.

"By whose orders?"

"Mr. Sexton, she tell me to do it."

"Well, Rondeau, some day I'll be boss of Laguna Grande and there'll be no more fighting," she replied, and passed on to the office of the Cardigan Redwood Lumber Company. Moira McTavish looked up as she entered.

"Where is he, dear?" Shirley asked. "I must see him."

"In that office, Miss Shirley," Moira replied, and pointed to the door. Shirley stepped to the door, knocked and then entered. Bryce Cardigan, seated at his desk, looked up as she came in. His left arm was in a sling, and he looked harassed and dejected.

"Don't get up, Bryce," she said as he attempted to rise. "I know you're quite exhausted." She sat down. "I'm so sorry," she said softly.

His dull glance brightened. "It doesn't amount to that, Shirley." And he snapped his fingers. "What did you want to see me about?"

"I wanted to tell you," said Shirley, "that—that last night's affair was not of my making." He smiled compassionately. "I—I couldn't bear to have you think I'd break my word and tell him."

"It never occurred to me, Shirley. Please don't worry about it. Your uncle has had two private detectives watching Ogilvy and me."

"Oh!" she breathed. A ghost of the old smile lighted her winsome features. "Well, then," she challenged, "I suppose you don't hate me."

"On the contrary, I love you," he answered. "However, since you must have known this for some time past, I suppose it is superfluous to mention it. Moreover, I haven't the right—yet."

She cast her eyes down, then raised them and looked at him searchingly. "I suppose you'll acknowledge yourself whipped at last, Bryce?" she ventured.

"I want peace, too," he answered wearily. "I'd be glad to quit—with honor. And I'll do it, too, if you can induce your uncle to give me the kind of logging contract I want with his road." "I couldn't do that, Bryce. He is not merciful to the fallen. You'll have to—surrender unconditionally." Again she laid her little hand timidly on his wounded forearm. "Please give up, Bryce—for my sake."

"I suppose I'll have to," he murmured sadly. "I dare say you're right. I suppose," he continued bitterly, "your uncle is in high feather this morning."

"I don't know, Bryce. He left in his motor for San Francisco about one o'clock this morning."

FOR an instant Bryce Cardigan stared at her; then a slow, mocking little smile crept around the corners of his mouth.

"Glorious news, my dear Shirley! So the old fox has gone to San Francisco, eh? Couldn't wait for the regular passenger-steamer to-morrow, eh?" And Bryce commenced to chuckle. "Oh, the poor old Colonel," he continued presently, "the dear old pirate! What a horrible right swing he's running into! And you want me to acknowledge defeat! My dear girl, there is nothing doing. I shall put in my crossing Sunday morning. Drop around and see me in action."

"You mustn't try," protested Shirley. "Rondeau is there with his crew—and he has orders to stop you. Besides, you can't expect help from the police. Uncle Seth has made a deal with the Mayor," Shirley pleaded frantically.

"That for the police and that venal Mayor Poundstone!" Bryce retorted, with another snap of his fingers.

"I came to suggest a compromise, Bryce," she declared, but he interrupted her.

"You can't effect a compromise. You've been telling me I shall never build the N. C. O. You're powerless, I tell you. I shall build it."

"If you loved me, you wouldn't oppose me," she protested softly. "I tell you again, Bryce, you make it very hard to be friendly with you."

"I don't want to be friendly with you. You're driving me crazy, Shirley."

Please run along home. I've tried to understand your peculiar code, but you're too deep for me. George Sea Otter is outside. Tell him to drive you. I suppose you're afoot to-day, for I noticed the Mayor riding in your sedan this morning."

She tried to look outraged, but for the life of her she could not take offense at his bluntness.

"Oh, very well," she replied with what dignity she could muster. "Have it your own way. I've tried to warn you. Thank you for your offer of the car. Uncle Seth sold my car to Mayor Poundstone last night."

"Ah! Then it was that rascally Poundstone who told your uncle about the temporary franchise, thus arousing his suspicions to such an extent that when he heard his locomotive rumbling into town, he smelled a rat and hurried down to the crossing?"

"Possibly. The Poundstones dined at our house last night."

"Pretty hard on you, I should say. But then I suppose you have to play the game with Uncle Seth. Well, good morning, Shirley."

"You're horrid, Bryce Cardigan."

"You're adorable. Good morning."

"You'll be sorry for this," she warned him. "Good morning." She passed out into the general office, visited with Moira about five minutes, and drove away in the Napier. Bryce watched her through the window.

"God bless her!" he murmured. "She's been my ally all along, and I never suspected it!"

HE sat musing for a long time. "Yes," he concluded presently, "old Poundstone has double-crossed us—and Pennington made it worth his while. And the Colonel 'sold' the Mayor his niece's automobile. I smell a rat as big as a kangaroo. In this case two and two don't make four. They make six! Guess I'll build a fire under old Poundstone."

He called up the Mayor. "Bryce Cardigan speaking, Mr. Poundstone," he greeted the chief executive.

"Oh, hello, Bryce," Poundstone boomed. "How's tricks?"

"So-so! I hear you've bought that sedan from Colonel Pennington's niece. Wish I'd known it was for sale. I'd have outbid you. Want to make a profit on your bargain?"

"No, not this morning, Bryce. Mrs. P. has been wanting a closed car for a long time, and when the Colonel offered me this one at a bargain, I snapped it up."

"And you don't care to get rid of it at a profit?" Bryce repeated.

"No, siree!"

"Oh, you're mistaken, Mr. Mayor. I would suggest that you take that car back to Pennington's garage and leave it there. That would be the most profitable thing you could do."

"What—what—what in blue blazes are you driving at?" the Mayor sputtered. "I wouldn't discuss it over the telephone. However, a hint to the wise is sufficient. To-day is Friday, and Friday is an unlucky day. I'd get rid of that sedan before noon if I were you."

There was a long silence. Then in a singularly small, quavering voice: "You think it best, Cardigan?"

"I do. Return it to No. 38 Redwood Boulevard, and no questions will be asked. Good-bye!"

When Shirley reached home at noon,

she found her car, and a brief note informed her that after thinking the matter over, Mrs. Poundstone had decided the family could not afford such an extravagance, and accordingly the car was returned with many thanks for the opportunity to purchase it at such a ridiculously low figure. Shirley smiled, and put the car up in the garage. When she returned to the house her maid Thelma informed her that Mr. Bryce Cardigan had been calling her on the telephone. So she called Bryce up at once.

"Has Poundstone returned your car?" he queried.

"Why, yes. What makes you ask?"

"Oh, I had a suspicion he might. You see, I called him up and suggested it; somehow His Honor is peculiarly susceptible to suggestions from me, and—"

"Bryce Cardigan," she declared, "you're a sly rascal. I shan't tell you another thing."

"I hope you had a stenographer at the dictograph when the Mayor and your uncle cooked up their little deal," he continued. "That was thoughtful of you, Shirley."

"Really, I believe you're happy to-day."

"Happy? If the streets were paved with eggs, I could walk them all day without making an omelette."

"It must be nice to feel so happy, after so many months of the blues."

"Indeed it is, Shirley. You see until very recently I was very much worried as to your attitude toward me. I couldn't believe you'd so far forget yourself as to love me in spite of everything—so I never took the trouble to ask you. And now I don't have to ask you. I know! And I'll be around to see you after I get that crossing in!"

"You're perfectly horrid," she blazed, and hung up without the formality of saying good-bye.

CHAPTER XXIX

SHORTLY after Shirley's departure from his office, Bryce had a visit from Buck Ogilvy. The latter wore a neatly pressed suit of Shepherd plaid, with a white carnation in his lapel. He struck an attitude and demanded:

"Boss, what do you think of my new suit?"

"You lunatic! Don't you know red blonds should never wear light shades? You're dressed like a negro minstrel."

"Well, I feel as happy as an end-man. And by the way, who's chirked you up? When we parted last night, you were forty fathoms deep in the slough of despond."

"No less a divinity than Miss Shirley Sumner! Quite innocently she imparted the information that old Pennington lighted out for San Francisco at one o'clock this morning. Wherefore I laugh. Te-he! Ha-hah!"

"Three long, loud raucous cheers for Uncle. He's gone to rush a restraining order through the United States District Court. Wonder why he didn't wire his attorneys to attend to the matter for him."

"He has the crossing blocked, and inasmuch as the Mayor feeds out of Pennington's hand, the Colonel is quite confident that said crossing will remain blocked. As for the restraining order—well, if one wants a thing well done, one should do it oneself."

"All that doesn't explain your cheerful attitude, though."

"Oh, but it does. I've told you about old Duncan McTavish, haven't I?"

Ogilvy nodded, and Bryce continued: "When I fired the old scoundrel for

boozing, it almost broke his heart; he wandered down into Mendocino County and got a job sticking lumber. He's been there two months now, and I am informed that old Mac hasn't taken a drink in all that time. And what's more, he isn't going to take one again."

"How do you know?"

"Because I make it my business to find out. Mac was the finest woods-boss this county ever knew; hence you do not assume that I would lose the old scoundrel without making a fight for him, do you? Why, Buck, I only fired him to reform him. Well, last week I sent one of Mac's old friends down purposely to invite him out 'for a time'; but Mac wouldn't drink."

"I know what your plan is," Ogilvy interrupted. "You're going to ask Duncan McTavish to waylay Pennington, kidnap him, and hold him until we have had time to clear the crossing."

"We will do nothing of the sort," Buck continued seriously. "Listen, now, to Father's words of wisdom. Didn't you hear me tell that girl and her villainous avuncular last night that I had another ace up my kimono?"

Bryce nodded.

"That was not brag, old dear. I had the ace, and this morning I played it—wherefore in my heart there is peace."

HE opened a drawer in Bryce's desk and reached for the cigars.

"Not at all a bad cigar for ten cents. However—you will recall that from the very instant we decided to cut in that jump-crossing, we commenced to plan against interference by Pennington; in consequence we tried to keep our decision a secret. However, there existed at all times the possibility that Pennington might discover our intentions and block us with his only weapon—a restraining order."

"Now, one of the most delightful things I know about a court is that it is open to all men. Also there is a wise old saw to the effect that battles are won by the fellow who gets there first with the most men. The situation was absurdly simple. If Pennington got to the District Court first, we were lost!"

"You mean you got there first?" exclaimed Bryce.

"I did—by the simple method of preparing to get there first in case anything slipped. Something did slip—last night! However, I was ready. Several days ago, my boy, I wrote a long letter to our attorney in San Francisco explaining every detail of our predicament; the instant I received that temporary franchise, I mailed a certified copy of it to him also. Then I instructed the attorney to prepare the complaint and petition for a restraining order against Seth Pennington et al. and stand by to rush the judge with it the instant he heard from me!"

"Well, about the time old Pennington started for San Francisco this morning, I had our attorney out of bed on the long-distance telephone; at nine o'clock this morning he appeared in the District Court; at nine-fifteen the judge signed a restraining order forbidding our enemies to interfere with us in the exercise of a right legally granted by the city of Sequoia, and at nine-thirty a deputy United States marshal started in an automobile for Sequoia. He will arrive late to-morrow night, and on Sunday we will get that locomotive out of our way and install our crossing."

"And Pennington—"

"Ah, the poor Pennington! Mon

(Continued on page 384)

WHAT HAS HAPPENED IN THE VALLEY OF THE GIANTS

BRYCE CARDIGAN and Buck Ogilvy are determined that that jump-crossing shall go in. Colonel Seth is equally determined that it shall not. A battle royal is in progress, Bryce and Buck having outwitted the Colonel by obtaining a franchise, the Colonel being the stronger, however, both in finances and because he is utterly unscrupulous.

Shirley fights fairly, and is just beginning to suspect her uncle's methods in protecting their joint interest. She has managed to maintain her friendship with Bryce and also with Moira MacTavish, his office aide, with whom redheaded Buck has fallen deliriously in love. Through Bryce, Shirley obtains a dictograph to overhear the secret conversation of her uncle and Mayor Poundstone.

Home Bureau Conference

Successful Meeting of State Workers

RESIDENTS of New York City, or, at the other extreme, of isolated communities of the State, would have been amazed had they dropped into any of the meetings at the recent conference of extension workers in home-making held in New York.

Demonstration agents from the home bureaus of the State, specialists and leaders from Ithaca and representatives of the Home Bureau Federation, marshaled by the energetic president, Mrs. A. E. Brigden, made up the attendance.

Many New York State women, city and country alike, may never have realized that there is such an organization as the Home Bureau established in 35 counties, with 3,104 members. Yet here were 60 representatives of the State College of Agriculture, which is behind this organization, spending five crowded non-union hours discussing its past, present and future problems.

Aims of Home Bureau

The aims of the Home Bureau are many: to bring the woman on isolated farms into a consciousness of neighbors, to help her with her home problems, and to band the women of the State together for organized community work. This is done partly by direct contact with the agent in the county, and partly by projects conducted by specialists from the school of home economics. Projects conducted last year, and to be continued next, were on clothing, with special emphasis on its selection and care; nutrition, showing the connection between food habits and health; household management and arrangement of kitchens and labor-saving equipment; health in anti-cold and anti-fly campaigns; and the selection of inexpensive household furnishings and color and material in design. Women who are unable to come out to meetings may follow the projects at home by directions sent from the school.

The field of the home bureaus is increasing so rapidly that the agent in charge of each county is in danger of finding herself scheduled with more work than she can possibly get through. Unless she is given assistance, some essentials in her work will have to be neglected. How to develop in each county local leadership that will relieve the agent and at the same time develop the ability of individual women was one problem discussed at the conference. Local leaders are women trained by the specialists from the school of home economics who represent the agents in the communities.

"Seeing New York" Trip

The members of the conference saw at first hand the important part that the fluid milk from up-State farms plays in the lives of New York City school children. Through the courtesy of Miss Laura Gamble, nutritionist with the New York office of the Dairymen's League Association, and Dr. Blumenthal, acting head of the Division of Child Welfare of the New York City Department of Health, the women visited several city schools and health centers where milk is used.

The extension workers saw the work of the New York City Tuberculosis Association in the schools, and learned that through 70 milk stations five or six million quarts of milk a year are used by this association in its work with children alone.

A trip through the crowded streets of New York in city busses, which have right of way, was in itself a thrilling experience. The last visit was to Bronx Park, where the Dairymen's League has placed in the zoo a pure-bred Holstein cow. It has been estimated that 50 per cent of the city children have never seen a cow. One youngster, in fact, remarked at the sight of the cow's horns, "What are the handle bars for?"

It was felt that the conference broke all records for attendance and work accomplished. Comments from the floor were frank, pointed and constructive. Such varied topics as the value of mingling play judiciously with work, of making one's free time actually free, and of giving thought to the important details of personal appearance, vied in interest with those of planning sched-

ules, of guiding group discussions to save time and reach the goal, and of suggesting new and much-needed projects for next year.—ALICE BLINN.

THE NEWEST SWEATER STYLE

Here is the sweater for the summer girl of 1923! A sleeveless tuxedo with rolled-back reverses and sleeve edges in checkered design of contrasting colors, it may be worn under a coat or with a separate waist and skirt when the weather gets warmer.

Canary yellow is a very popular shade this year. So is Lanvin green,

like the old reseda, but a little softer. Mountain Haze is a lovely, soft blue, with a good deal of lavender to it. And black and white appears in many odd combinations. There is also a "rain-bow" yarn which shades gently from one pale shade to another.

Instructions for making the tuxedo sweater E10 will be sent upon receipt of 12c in stamps.

The Valley of the Giants

(Continued from page 383)

"pauvre Seth!" Buck sighed comically. "He will be just twenty-four hours late."

"You old he-fox!" Bryce murmured. "You wicked, wicked man!"

Buck Ogilvy lifted his lapel and sniffed luxuriously at his white carnation, the while a smile played around his humorous mouth. "Ah," he murmured; life's pretty sweet, isn't it!"

CHAPTER XXX

EVENTS followed each other with E refreshing rapidity. While the crew of the big locomotive got up steam, Sexton and Jules Rondeau toiled at the loading of the discarded boiler and heavy castings aboard two flat-cars. This task was completed by noon, and the mogul backed up the main line past the switch into the Laguna Grande yards; whereupon the switch-engine kicked the two flat-cars and the wrecking-car out of the yard and down to the crossing, where the obstructions were promptly unloaded.

To Sexton's annoyance, Bryce Cardigan and Buck Ogilvy appeared on the scene, both very cheerful and lavish with advice as to the best method of expediting the job in hand. To Bryce's surprise Jules Rondeau appeared to take secret enjoyment of this good-natured chaffing.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Prevent- ing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437
Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

In the Woman's World

League Holds Convention—Household Helps

"THE most powerful factors in the world to-day are clear ideas in the minds of energetic men and women of good will."

With this sentence meeting their eyes every time they turned a page of the official program, five hundred delegates of the National League of Women Voters met recently at their fourth annual convention, held this year in Des Moines, Iowa.

As a result, perhaps, of the inspiring influence of the "text," the entire atmosphere of the convention was one of friendly, cooperative enthusiasm, tempered with common sense, which enabled the delegates to accomplish much in the short time. In fact, so smoothly did all factors work together that one masculine observer said when it was all over, "To my mind, that is the strongest body of women in the United States."

Under the chairmanship of Mrs. Edward Costigan, the Committee on Living Costs held a conference which included consideration of cooperation between producers and buyers, and which Miss Anna E. Richardson, dean of the Home Economics Division of Iowa State College, and Prof. E. D. Nouse, chief of the Agricultural Economics section, addressed.

Two resolutions, indicating both the concrete and the ideal aims of the League, were passed with enthusiasm. One set as a task for the coming year the mustering of a 75 per cent voting strength of American citizens. That our last presidential election brought out only 49 per cent of our entire body of voters was regarded as a serious indictment of American patriotism.

The other resolution pledged the members to work for world peace, and especially "to unite in every constructive effort toward permanent world

organization for peace, without regard to party affiliations."

Plans for the year include especially the development of citizenship schools, open to any voter irrespective of sex, party or age, which will enable local communities to study both local and national affairs with the guidance of specialists in civic lines. These plans will be worked out by Miss Belle Sherwin, Chairman of the Committee on Efficiency in Government.

In closing, Maud Wood Park, President of the League, emphasized the desire of the officers to include within its membership women of all interests and political beliefs, fusing them all in a common platform of intelligent and active interest in good government. The League, according to Mrs. Park, is not primarily for the country woman or the city woman. It is for the American woman, wherever she lives or whatever her occupation. It is, in fact, "Everywoman's League."

THEY SHOULD HAVE IT

A bill is in the Legislature designed to make the School of Home Economics of the New York State College a separate college. It is now a school or department under the College of Agriculture. Such separation would give the women an opportunity to work out courses of study based on the needs of home economics rather than of agriculture, and also enable the college to grant a degree in home economics.

Both the College of Agriculture and the College of Home Economics, in this case, would have the same dean, with no additional administrative expense. We believe that the women have a right to a separate college. It is to be hoped that the bill will pass.

YOU WILL USE EACH OF THESE PATTERNS MANY TIMES

HOME-SEWING time comes with these warmer, longer days, when the children are still out of the way, at school, but when the spring weather turns one's thoughts to the simple, easy-to-make clothes. Children's rompers, dresses and suits are especially tempting because they can be made so easily, so cheaply and so prettily.

THE little girls' dress No. 1647, for instance, is one any mother would love to see her child wear. The dress is simple, yet the collar and cuffs, sash ends and pockets add distinctive touches. No. 1647 cuts in sizes 6, 8, 10, 12 and 14 years. It requires 2 yards of 36-inch material, with 1/2 yard contrasting, for size 8. Price of pattern, 12c.

AN apron which can be slipped on or off with equal ease, which has becoming lines and yet protects the dress completely is No. 1655. Cut out several at a time! The small picture shows how little troublesome cutting or sewing it requires. Each apron takes only 2 1/2 yards of a durable wash fabric, and it is prettier if trimmed with white or matching rickrack braid, of which 9 yards will be needed. Price 12c. (stamps are preferred; if coin is sent, wrap well).

ROMPERS are made for hard wear. No mother can breathe freely when her youngest is romping in good clothes—hence this fairly recent and very sensible style. No. 1737 is just as comfortable as any romper could be; it is easily run up in an afternoon and costs almost nothing. It cuts in sizes 2, 4, and 6, and requires only 1 1/2 yards 36-inch material. Price of pattern, 12c.

To Order: Write your name, address, pattern numbers and sizes very clearly. Send your order, with the correct remittance, to Fashion Department, American Agriculturist, 461 4th Ave.

THE SUMMER CATALOGUE

The summer fashion book is ready.

For every-day dresses, for children's clothes for "best," for embroidery designs and for the pages of dressmaking helps which always are included in our catalogues, this year's fashion book is exceptionally fine.

Our usual low price—10c—is the cost but those who consult our book before ordering patterns are saved many times that amount.

Add 10c in stamps (or carefully wrapped coin) to your order. Address Fashion Department, American Agriculturist, 461 4th Ave.

Canada Offers "Last Chance" for Virgin Farms

THINK of what you could produce on a farm of virgin fertility, without the burden of high-acreage cost. Think of what 20-to-40 bushel wheat would mean to you under these conditions, and of dairying and stock raising on cheap pasture land. Land pays for itself in a few crops—no artificial fertilizer—no heavy investment. You have envied the farmer who got his start when land was cheap. Here's your chance, perhaps your last chance, for the same brand of prosperity.

Western Canada—Your Opportunity!

Western Canada is the farmer's land of opportunity. Thousands of settlers who started not many years ago with little or nothing, are today the owners of fine farms, with comfortable homes and barns, thorobred stock, dairy herds—all the marks of prosperity. Yet land is not dear—only \$15 to \$20 an acre for rich, virgin, prairie convenient to railways. Land is not dear in Western Canada—yet—because there is so much of it. But many settlers are expected in 1923, and now is your opportunity, before the best farms are taken. Get started. Taxes are reduced, not raised, on land brought under cultivation. On farm buildings, improvements, machinery, personal effects, automobile, etc., there is no tax at all. Canada wants workers—it wants its land farmed—and the farmers, through their municipal councils, have practical control of all local taxation.

Special Renter's Plan—Buy Out of Profits

To aid and encourage the honest worker with perhaps little capital, the Canadian Government has a "Renter's Plan", whereby one may work a new or improved farm—"Try it out" for several years if desired—and buy a farm of his own out of profits.

Thirty-Two Years to Pay

For the benefit of those wishing to buy land, a national non-profit sharing organization—the Canada Colonization Association—has been established, with head office at Winnipeg, and United States office at St. Paul. This Association offers selected land convenient to railways—much of it at \$15 to \$20 per acre—on very small cash payment; no further payment until third year; balance extended over thirty years, but purchaser may pay up and obtain title at any time, if desired. Interest six per cent on deferred payments.

Special Excursion Rates to Western Canada

In order that you may inspect the land—see for yourself—judge of its value and fertility—special excursion trips of inspection will leave United States points on the first and third Tuesday of each month. Single fare plus \$2 for the round trip, available from all principal centers. Take advantage of these low railroad rates to inspect for yourself the opportunities which Western Canada has to offer you. Seeing is believing. The nearest Canadian Government Agency will give you all information. The men in charge are Government officials, interested only in the service of the prospective settler. We help you find your opportunity. Let us know something of your position and receive free book with maps and information how special railroad rates can be arranged for a trip of inspection. Mail the coupon.

Free Homesteads are still available in some localities.

Canada welcomes tourists—come and see our country for yourself. No Passports required.

AMERICAN AGRICULTURIST A-14

461 FOURTH AVE., NEW YORK CITY

Reviewing the Latest Eastern Markets

POTATO MARKET EASIER

FOLLOWING the excitement in the potato market in New York City, when Idaho Rurals were quoted as high as \$2.50 cwt., sacked, delivered in uneven weight sacks, the demand decreased. Many buyers having loaded up, refused to buy and prices reacted. On the decline, Idahos were confirmed as low as \$2.15 cwt. This stock is still getting most of the attention.

States in 150-lb. new sacks were quoted at \$4 sack, delivered; a few higher. Demand limited. They were offered a little more freely.

The supplies in the yards were liberal, but with a steady demand prices were maintained. Maine Green Mountains sold from \$4.50 to \$5, bulk, 180 lbs.; States, 150 lbs., \$3.25 @ 3.75; Idaho Rurals, \$2.25 @ 2.40 cwt.; Long Islands, \$6 @ 6.50 bulk, 180 lbs.; Floridas, \$15 @ 17 bbl.

EGG RECEIPTS BELOW LAST YEAR

Weather conditions have apparently held back the anticipated heavy April production of eggs. Receipts at New York last week were greater than the week previous, but still considerably below the corresponding week last year. The total receipts since January 1, 1923, at New York, are still over 70,000 cases below last year in the same period.

The movement into public cold storage warehouses is far behind last year. The quantity on hand in New York storage houses April 19 was only 363,521 cases, compared with 517,357 cases at this time last year. The amount on hand at Chicago same date was less than half the amount at this time last year. What this means is that in the next few weeks the buying for storage purposes should be heavy, and if the late spring passes rapidly into warm weather, eggs of the best quality will be comparatively short in supply. As warmer weather comes the production will undoubtedly increase rapidly and may come up to all expectations in volume, as in 1912, when practically all the storage production came after April 10.

The consumptive demand has been much lighter the last two weeks, and is now running behind this time last year. Really fancy white or brown eggs have been in demand, but a very small proportion of the receipts came up to a high enough standard to bring the quotations for nearby extras. In the middle of last week the average run of State eggs sold at 31 to 34c.

BUTTER PRICES DROP

The long-delayed spring break in the butter market came last week. Prices on nearly all grades declined about 4c per lb. Whereas last week creamery extras were strong at 49c, this week the market is weak at 45c.

On April 19 there was on hand in cold storage at New York 856,517 lbs., as compared with 1,370,515 lbs. on the same date last year. The market continues in a healthy condition, in spite of the weak tendency, and from the point of view of the wholesale trade, the decline in prices is a normal adjustment to spring conditions.

CHEESE PRODUCTION INCREASES

In the N. Y. market the trade has been quiet, but the stocks on old cheese are steadily reducing. The big difference between the prices of old and new cheese at the present time should cause greater buying of the fresh cheese.

State whole milk flats, held, average run, white and colored, were quoted on April 19 at 27½ to 28c; flats, fresh, average run, at 21c.

There is reported to be very keen competition among buyers in up-State New York for May, June and summer make, and contracts are being made on the basis of New York average run quotations and some at substantial premiums over that quotation.

BROILERS DECLINING

With continually increasing receipts of spring broilers, both by express and freight, the price declined last week. On April 19 express broilers, Boston and nearby, colored, over 2 lbs. each, were quoted at 65c; under 2 lbs. each, 55 @ 60c; white and brown Leghorns, large, 50 @ 55c; small, 40 @ 45c. Even

at present prices, consumption of broilers is somewhat limited, and it is likely that prices will drop to a lower level in the next week or two.

NO SURPLUS OF CHOICE VEALS

In spite of the very liberal receipts of country-dressed calves at New York last week, there was no surplus of choice to fancy veals, and many sales

ket. The situation at Boston has been complicated by the recent buying of Western wools at growers' prices by some of the large New England mills. The wholesale wool dealers held off from buying because they did not see an opportunity to make money, until the mills finally went direct to sources. American mills have been buying rather actively in the auction at Brad-

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on April 19:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras...	37½ @ 39½
Other hennerly whites, extras.....	35 @ 36
Extra firsts.....	32½ @ 34	30 @ 31	29½
Firsts.....	31 @ 32	28 @ 28½
Gathered, whites, first to extra firsts.....	31 @ 34
Lower grades.....	28 @ 30
Hennery browns, extras.....	33 @ 35
Gathered browns and mixed colors, extras.....	29 @ 32	29 @ 30
Pullets No. 1.....	25 @ 27
Butter (cents per pound)			
Creamery (salted) high score.....	45 @ 45½	49 @ 50
Extra (92 score).....	44½ @ 45	47 @ 48	45½
State dairy (salted), finest.....	44½ @ 44½	44 @ 45
Good to prime.....	43½ @ 44	36 @ 43
Hay and Straw, Large Bales (per ton)	U. S. Grades	Old Grade Standards	
Timothy No. 2.....	\$24 @ 25	\$20 @ 21	\$21 @ 22
Timothy No. 3.....	22 @ 23	18 @ 19
Timothy Sample.....	14 @ 17
Fancy light clover mixed.....	25 @ 26	21 @ 22
Alfalfa, second cutting.....	27 @ 29
Oat straw No. 1.....	13 @ 14	15½ @ 16
Live Poultry, Express Lots (cents per lb.)			
Fowls, colored fancy, heavy.....	26 @ 27	26 @ 27	29 @ 30
Fowls, leghorns and poor.....	22 @ 24	24 @ 25	27 @ 28
Chickens, leghorns.....	16 @ 17	17 @ 18	19 @ 20
Roosters.....
Live Stock (cents per pound)			
Calves, good to medium.....	11½ @ 13	11 @ 11½
Bulls, common to good.....	4 @ 4½	5 @ 6
Lambs, common to good.....	9 @ 12½	11½ @ 12
Sheep, common to good ewes.....	3½ @ 5½	6½ @ 7½
Hogs, Yorkers.....	9 @ 9½	9¼

of these were made at premiums above quotations. Following prices on country-dressed calves, April 19, per lb.: Choice, 16 @ 17c; good to prime, 13 @ 15c; poor to fair, 10 @ 12c; common, 6 @ 9c.

Demand was quite active for light calves toward the end of last week, and the price advanced \$1 per cwt., with not nearly enough stock to go around. Generally sales of common to good were at \$10 to \$14.50 cwt., with one lot of choice calves selling at \$15.

SLOW TRADE IN HAY

Although top grades of timothy hay at New York continued steady, the demand was slow for lower grades, which made up bulk of receipts. Small bales sell at \$1 per ton less than large. Some shipments are coming by boat, and as these increase the market will probably be weaker on low-grade hay.

SOME FEEDS ADVANCE

The feed market, except for gluten feed, was fairly firm last week. Cottonseed meal, oil meal, meal and mill feeds, all advanced, but gluten feed declined \$2.50 per ton. Largest increases were in oil meal and cottonseed meal. Buffalo market prices, April 18, carlots Buffalo rate basis, 100-lb. sacks, sight draft, follow:

Gluten feed, \$37.55; Cottonseed meal, \$46.50; Oil meal, \$44; Dried brewers grains, \$34; Standard spring bran, \$33.75; Hard winter bran, \$34.25; Standard spring middlings, \$33.25; Choice flour middlings, \$36; White hominy, \$34.80. No. 2 Yellow corn per bushel, 91½c; No. 2 White oats, 52¼ @ 53c.

GRAINS CONTINUE ADVANCING

Grain prices continued to advance last week, and the speculative market was feverish. Cash quotations, April 19, follow:

Wheat, No. 2 red, \$1.52; No. 2 hard winter, \$1.41½; Corn, No. 2 yellow, \$1.00½; No. 2 mixed, \$1; Oats, No. 2 white, 57c; No. 3 white, 55½c; Rye, c. i. f. export, 97½c; Buckwheat, \$1.86 @ 2.10, nominal.
Chicago—Wheat, No. 3 red, \$1.33; No. 2 hard, \$1.26 @ 1.26½; Corn, No. 2 white, 81¼c; No. 2 yellow, 81¼ @ 81½c; Oats, No. 2 white, 46¾ @ 47¼c; No. 3 white, 46 @ 46½c; Rye, 87c; Barley, 73c.

WOOL CONTINUES FIRM

The wool market continues firm, with no change in prices over those quoted here last week, but a tendency toward higher prices. At Boston there is a revival of interest in coarser grades and a broadening of the mar-

MOSS'S CHICKS

This season has proven to be the biggest season in our history. An outstanding factor is the great number of reorders from customers of past years, which speaks most convincingly of our High Quality and Superior Service.

Above: Arrow points to extra wide space between wick and outer tube. This is an exclusive feature of the Lorain Burner and absolutely prevents wick-sticking.

Read the Lorain Guarantee

BECAUSE the short chimney oil stove burner produces an intense flame which strikes directly on the bottom of the cooking utensil, the heat generated has, in the past, caused the early destruction of its vital part, the inner combustion tube.

This fault has been completely eliminated in the Lorain High Speed Oil Burner by making the inner combustion tube of "Vesuvius Metal" which is not affected by the destructive action of this intense heat.

Therefore, American Stove Company now gives the following unconditional guarantee with each Lorain Oil Burner:

Guarantee Should the inner combustion tube of the Lorain High Speed Oil Burner burn out within 10 years from date of purchase, replacement will be made entirely free of charge.

READ the Lorain Burner GUARANTEE **LOOK for the RED WHEEL**

YOU'LL like the Lorain High Speed Oil Burner because it has given perfect satisfaction in thousands of homes for more than ten years.

It gives a clean, odorless, blue flame of great intensity. This flame comes in direct contact with the cooking utensil, not ten inches from it.

There's nothing to give trouble, nothing to get out of order, nothing to wear out from ordinary usage. The most vital part is guaranteed for ten years. Read the Guarantee.

Don't buy an oil cook stove until you've seen one of the many famous makes equipped with Lorain Burners. If your nearest dealer can't supply you, write us immediately.

Guernseys—Why I Keep Them - By H. E. Babcock

Look to Your Taxes

"It Is Time That Farmers Got Together To Protect Their Interests"

THIS fiscal year the State government expenditures will amount to \$132,000,000; for next year they have been estimated at \$150,000,000; and for the year following at \$200,000,000. This means higher direct State taxes. The increase will have to be paid by a direct tax on tangible property—this means chiefly real estate. If the Legislature spends more money, real estate will have it to pay; there is twice as much other property in the State that is not reached by this tax; why should the whole load be put upon one-third of the property?

Why should not part of it be raised by a surtax on incomes as is done in Wisconsin? This would be a great advance in several directions: First, it would distribute the tax more equitably, and second, there would be more people interested in economy by the Legislature. As the law now stands, a larger State budget does not affect the income tax rate on corporations or individuals.

If part of the increase were to be raised by a surtax on income, every business concern and every individual liable to a State income tax would at once be vitally interested. Were a proposition to spend \$150,000,000 or \$200,000,000 to come up in the Legislature, immediately they would protest and the pressure on the Legislature for economy would be multiplied many fold. As it stands now, only the owners of tangible property are affected by the direct tax, and the farmer and the small-house owner are silent and without any organized means of combatting extravagance.

As the law now stands, not only will any addition to the State budget be made up by a direct levy on tangible property, but, in addition, the \$20,000,000 of back taxes from which the banks of the State have recently been freed by the Richmond decision of the

By H. C. McKENZIE

United States Supreme Court will have to be charged back to the several districts and piled upon the other item. A new tax measure will have to be enacted to tax the banks in the future, and several bills have been introduced in the Legislature for that purpose. The one favored by New York City, and which is being pushed before the Legislature, is the Walker Bill, which provides for a tax of 2 per cent on the value of the bank shares. A hearing on this bill was held in the Cities Room at the Capitol on April 11. There was a room full of representatives of bankers, of banking associations, of New York City, and of business organizations. Just one lone farmer, who got there by accident.

This bill provides a tax of 2 per cent on the bank shares. The banks claim that under it they will be taxed in undue proportion to others. It is pertinent to inquire how this compares with the taxes that the farmers are paying. A comparison of the proportion of gross income, of different kinds of business, absorbed in taxes shows that the farmer was at the head of the list; a few of the items are as follows:

Farming	\$1.83
Non-metal mines (very small number)	1.43
Public utilities	1.31
Textiles19
Clothing manufacturing08
Bankers42

This means that of every hundred dollars a farmer takes in he pays out for taxes \$1.83, compared to 42 cents which the banker pays.

Figuring another way, we come to the same conclusion, that the farmer is paying more than his fair share. Taking two typical rural counties, St. Lawrence and Delaware, we find that in St. Lawrence the average tax

rate on the assessed valuation is \$.0334. Adjusted to the equalized valuation, or actual value, it is \$.0237. For Delaware County the average rate on assessed valuation is \$.0369, and for the actual value \$.0217. All the Walker Bill asks the bankers to pay is \$.02, and still they claim they would be overtaxed as compared with others.

It should further be remembered that after a farmer has paid his direct State and local taxes, he still has a State income tax to pay. But the Federal law has been so manipulated that the owner of bank stock is relieved from it. It might further be observed that the farmer is taxed on all his earning assets: his farm, buildings, stock, machinery, and equipment. Nine-tenths of the bank's earnings come from the deposits WHICH ARE NOT TAXED. If the farmer was put on all fours with the banker, the banker would be taxed on HIS earning assets, which includes the deposits.

And yet one of the bankers came to Albany and complained because in a certain bank a 2 per cent tax on the shares would amount to a 10 per cent tax of the net income. He made this complaint after his organization had spent a year at Washington making it impossible to adequately tax them on their net income, and when, at the same time, not 10 per cent, but 30 per cent of the net income of all the real estate in the State of New York is absorbed in taxes, according to a statement made by Governor Miller in one of his messages to the Legislature.

It is time that the farmer learned from the example of these other groups to cooperate for the protection of their interests. When they do, the banks will not be able to charge back to the owners of tangible property \$20,000,000 of back taxes and the extravagant expenditures of the Legislature will not all be loaded on the same shoulders.

Farmers' Hours

8,640,000 Times A Year—100 Yanks For A Cent!

IN the editorial of the April 14 American Agriculturist it is not mentioned what sort of farmer Mr. Arthur Pound interviewed, hence it is impossible to compare his working hours with those of others in similar types of farming. However, it is very likely that some farmers do not work more than seven hours a day on the average. My own experience has been almost entirely with a general farm, on which dairying was one of the chief sources of income, and we worked about eleven hours a day most of the year.

I always kept two men the year round, as I considered it necessary to keep a man through the winter if one was to have him in the summer, and I myself did not have to do much work in the winter on that account. Our day was about as follows: start chores at five, one hour for breakfast, work until noon, one hour for dinner, and work until six. Sometimes the work went over a little, but we figured on getting done at six. Of this time two and a half to three hours were spent in doing chores until I got a milking machine, and then one man spent most of ten hours in the lot with the four-horse team during plowing and fitting, and the other did all the milking in the same time that it formerly took the three of us.

Many of my neighbors worked somewhat longer hours. Not many of them worked less. Now there are few hired men in the

By A. H. DeGRAFF

country, and the operators of the farms work longer hours. Many farmers put in their time at puttering jobs between the really busy seasons, owing to poor planning of the farming operations. I always planned to have productive work for every day of the year. I raised early and late potatoes and some cabbage. This made more fitting, cultivation, and planting in the spring and summer, spraying in the early summer, digging of early potatoes in the late summer, in a time that would otherwise have been slack between harvesting and silo filling, digging of late potatoes after silo filling, and cutting of cabbage last of all. I also was usually able to slide in some two to three months of teaming on the road every summer.

In the winter I hauled milk to fill out the time. I believe that the more careful planning of farming, to utilize the time to the best advantage, together with the use of tractors or four-horse tools in order to increase the work performed per man, offers the greatest possibilities of decreasing the cost of production which we have.

Incidentally, I might mention that I have figured out the price received for milking cows. One pulls teats on an average of 8,640,000 times a year. At the average rate of payment of farm labor, one gives some 100 yanks for a cent. It is not the long hours

on the farm that drive workers away; it is the low rate per hour. The only way we can improve the profit on the farm is not to increase production, but to decrease costs and to increase prices. To decrease costs we must so plan our work that there will be profitable or at least productive work all of every work day in the year, preferably both for horses and men. You don't get paid for loafing nor for puttering around to get your time in.

My hours did not vary from early spring to late in the fall, and my men worked about ten hours a day the other three and a half to four months. Most of the farmers have more variation than that, however, working longer hours in the busy season and shorter hours in the slack times.

Hod carriers in some of our Eastern cities are now holding up all building operations while they strike for \$1 an hour. At this rate my men would earn only \$70 a week in the summer and \$64 a week in the winter, or an average of about \$3,544 a year. I really cannot see any particular reason why they should not get the same wages as hod carriers. The work is about as hard, and takes infinitely more brains. And yet people wonder what is the matter with farming!

The only way to have a friend is to be one.—RALPH WALDO EMERSON.

Guernseys—Why I Keep Them

One Reason Is The Housewife As She Appears At 6 A.M.

I WELL remember the late E. R. Zimmer saying to me not so very long ago as we walked down the street in Syracuse: "Why is it, Babcock, that you take so much pride in your Guernseys, and yet when you write about cows it's always about your Holsteins?" Bill Davis, secretary of the State Guernsey Club, was along, and Zimmer's question placed me in a somewhat embarrassing position. I don't recall what I answered, but now I shall square myself, anyway, by writing about Guernsey cows as fully and with as much enthusiasm as my editor will permit.

The truth of the matter is that I love a good cow, no matter what her color. But next to the pleasure of owning and handling good cows, and even of more fundamental importance, comes the economic necessity of making them pay; and I can truthfully say that good cows of at least three dairy breeds have both given me pleasure and paid in my herds.

Why I Chose the Guernsey

The Guernsey, however, has her own individual and peculiar qualities, and something of her appeal to the dairyman I hope to bring out in this article.

It is necessary for me to draw mainly on my personal experiences and observation; I hope that my readers will not draw the conclusion that because I do this I am unduly impressed with the importance of my own ideas. Rather, I want to give as true a reflection as I can of the reasons which led me to invest money in the Guernsey breed, and of the experiences I have had with it.

I must go back to 1904 and 1905, my last two years in high school, when I left the farm between four and five o'clock in the morning and peddled milk around a small village before going to school. Then it was that I became acquainted with the housewife—the housewife as she appears at six in the morning, minus some of the embellishments of the afternoon, with her temper on edge and a biting sarcasm at her command. Then it was that the importance of the cream line on a bottle of milk was impressed on me; it never will be forgotten. Then, too, I learned of the real appreciation people have for a golden yellow color in milk.

It's Creamier—It's Golden Yellow

When, fifteen years later, I decided to embark on an enterprise to furnish consumers with milk direct from my farm, my mind naturally reverted to those early experiences, and I chose the Guernsey because I knew

By H. E. BABCOCK

with her, as with no other breed, I could build a high-class retail milk business.

The milk of the Guernsey cow is distinguished by its creaminess and by its golden yellow color. This golden yellow color is distinctly a breed characteristic. Not only does it appear in the milk of the Guernsey, but in her hide and skin secretions as well.

The idea is also carried on in the color of the typical Guernsey, which is always light or dark fawn and white, and which, to meet the highest ideals, has a fawn-colored nose

milk production on roughage, with little or no grain, is another outstanding quality, and it makes her, under certain conditions, a very economical producer.

The importation of Guernseys into America began in 1818, and scattered shipments continued up until 1905. From then until the present time an average of about six hundred animals a year has been imported into the States. This American market has aroused the farmer on the Isle to a greater appreciation of his cows, and he undoubtedly takes better care of them, since he is sure of selling good animals to America.

In America, as is the case with all pure-

bred animals, the interests of the Guernsey are looked after by an association of breeders, known as the American Guernsey Cattle Club. This organization has its headquarters in Peterboro, N. H., where it maintains registers of all pure-bred Guernseys and conducts a so-called advanced registry, in which is kept a record of animals which, under certain official conditions, make production records.

An Association of Breeders

Life membership in the American Guernsey Cattle Club costs \$50, and is only granted to men who

are recommended by existing members of the club and who receive the practically unanimous support of the membership. Registration of pure-bred Guernseys costs \$2, and records of transfer of ownership cost \$2.50. The money collected from membership, registrations, transfers, and other incidental fees is used to support the association and to put out propaganda and advertising for the advancement of the Guernsey breed.

Members of the association meet annually in May and elect officers and a board of directors. Between annual meetings the affairs of the association are conducted by the directors and officers.

The Practical Merits of the Breed

Before I discuss further the distinguishing characteristics of the Guernsey, or even allude to some of the handicaps with which the owner of a herd of Guernsey cattle finds himself confronted, I must again refer to my statement at the beginning of this article. I am setting down here only my own experiences and observations; these may well be challenged by others with wider experience.

To begin with, the Guernsey breed has a distinct advantage over every other dairy breed in the natural golden color of the milk

(Continued on page 402)

In her native home, the Guernsey has been closely associated with humans. As a result she is especially gentle.

and tongue, in distinct contrast to the black nose and tongue of the Jersey.

The Guernsey cow originated on the Isle of Guernsey, a small island about twenty-four miles square, lying in the English Channel. Neighboring to it is the Isle of Jersey, from which originated the Jersey cow.

The Home of the Guernsey

The agriculture of both islands has been developed with reference to the London market, and on the Isle of Guernsey truck crops and greenhouses have held a more prominent place in the minds of the farmers than the Guernsey cow.

This has resulted in the development of the Guernsey as a side issue, agriculturally speaking, and as a family cow. The island is so small that the cows are staked out instead of pastured, and a great deal of the time they are fed on the surplus roughage resulting from garden operations. As a result, the Guernsey cow has been bred gentle, and is able to adapt herself to a large consumption of farm-raised roughage.

These characteristics—the tractability and intelligence of Guernsey animals, both cows and bulls—immediately strike one who has handled the larger and rougher Holsteins. The Guernsey's ability to give a satisfactory

A Good Word For the Guernseys

WE take pleasure in this issue of calling your special attention to the Guernsey cow. We are playing no favorites and expect to talk about the other breeds later, but, whether or not the Guernsey is your favorite, we know you will enjoy Mr. Babcock's article, which we are featuring this time, and also the other articles, pictures, and advertisements of a most wonderful dairy breed.

The question of which is the best breed is old and, in our opinion, too much argued, for, after all, it is not so much the question of the breed as it is of the man behind the cow. Every breed has its peculiar characteristics; every dairyman knows what those characteristics are, and can, therefore, determine which appeals to him the most. If he gets the breed that pleases him, that is the one he should have, whether it is Guernsey, Jersey, Holstein, or Ayrshire.

Do Not Hoard Sugar

WE have tried to keep sensational and radical writing out of American Agriculturist, but every once in a while something happens that makes it difficult to keep from breaking forth into strong language and from calling a spade a spade. For instance, last winter we started two or three times to express some rather emphatic opinions about so much coal going to Canada when our own folks were suffering so on this side, but we finally did not say anything because, after all, it was more of a city problem than a country one, and because we were not sure of all the facts. Now there comes another situation that does affect farmers, and this time we are not going to keep quiet.

The present situation in the sugar market is one of the most abominable steals that has been made in this country in years. In spite of the fact that we are supposed to have laws that keep scoundrels within bounds, and in spite of the fact that all the authorities agree that there is no real shortage of sugar, the operators and speculators have succeeded in forcing the price of this necessity of life to

twice what it should be, stealing the pennies from the tables of a hundred million people. The farmers who produced the sugar have not profited at all by the increased price.

Inasmuch as the authorities do not seem to be able to cope with the situation, the people themselves will have to handle it by a judicious use of the great law of supply and demand. This means that all of us should buy as little sugar as we possibly can until the price gets back to where it should be, and that under no circumstances should we at the present time buy any large quantity for future use.

Marketing High-Testing Milk

CALLING special attention in this issue to the Guernsey cow brings to mind again the old argument whether there is more profit in a breed that produces a large volume of milk low in butterfat or one giving a smaller volume of milk but with a higher test.

Many are the heated arguments we have listened to in attending the meetings of the Dairymen's League Board of Directors between the advocates of the Jersey and Guernsey on one side and the Holstein and Ayrshire directors on the other. It was the claim of the Guernsey and Jersey men, and without doubt they were right, that the butterfat in high-testing milk sold under the league plan for a too low price. Those on the other side usually agreed, but pointed out the difficulty of raising the butterfat price to the dealer until the consumer was educated to pay more for this high-quality milk. Shortly after the milk strike of 1916, the league did raise the price of butterfat from three to four cents a point, but even at four cents a point there is little profit in the production of high-testing milk.

Mr. Babcock, in the feature article this time, shows how he has solved the problem for himself, by educating the consumer to the advantages of milk containing plenty of butterfat, so that the consumer is willing to pay an extra price for it.

Laws to Protect Women and Children

WE were sorry to hear the decision of the United States Supreme Court that the Minimum Wage Law is unconstitutional. Such a law exists in the District of Columbia and in several States, and was being given consideration for passage in several more. It establishes a minimum wage rate for women and children, and represents one more step in the progress which labor unions and welfare workers have made in the long fight to protect women and children in industry.

All that one needs to prove that a bitter fight has been necessary to improve working conditions for women and children is to read about conditions in industry that existed even in this civilized country less than one hundred years ago. Speaking of this period, Dr. Richard T. Ely says: "Windows were nailed down and the operatives deprived of fresh air. . . . Women and children were urged on by the use of a cowhide, and an instance is given of a little girl eleven years of age whose leg was broken by a billet of wood. The wages were small; a woman's earnings in this period were estimated at less than sixty dollars a year. The working day in winter varied from twelve to fifteen hours."
